

disano ● GROUP

Fosnova

2020 - 2021 PROFESSIONAL

Fosnova S.r.l., located in Rozzano (Milan), boasts decade long expertise in architectural lighting design. Currently, Fosnova's production specializes mostly in fixtures utilising LED.

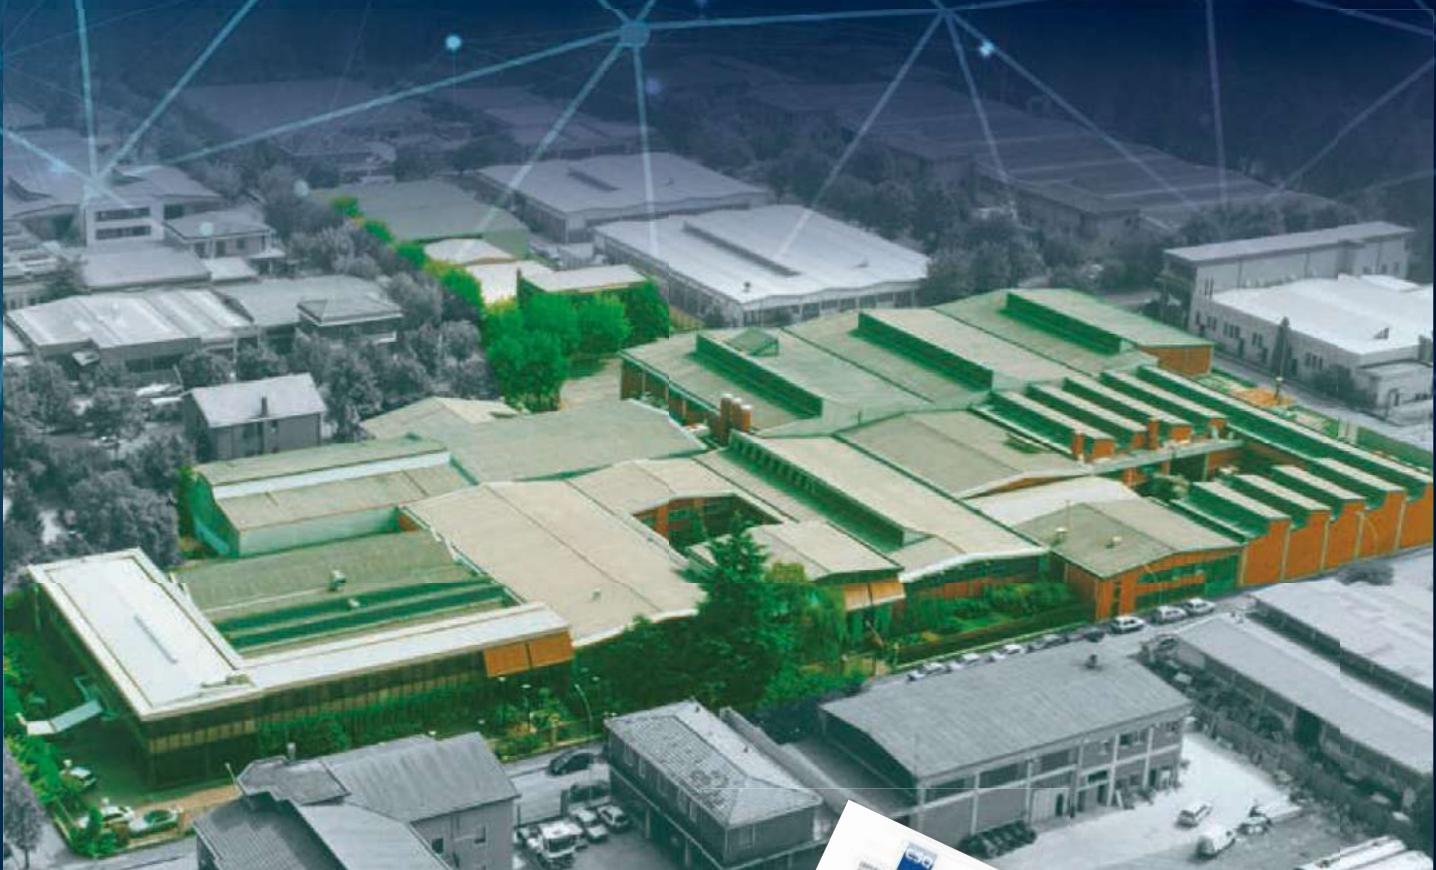

The Fosnova product range offers a variety of solutions to indoor lighting problems, including:

- Downlights and spotlights
- Interior floodlights
- Lamp stand, wall and ceiling mounted fixtures,
- Modular systems,
- Electrified tracks.

Group considers service to the market and continuity in relations with customers as key elements in company policy in which it has continuously invested in Italy and Europe.

Improvements in manufacturing technology, excellent innovation, rigorous controls throughout the entire corporate process system, high product quality control standards, as well as the development of advanced computer systems for lighting design calculations.

The photometric measurements certified by the CSQ mark are entirely conducted in our research laboratories, in compliance with the European Lighting Design Committee's guidelines.

For **Fosnova**, Quality System Certification (CSQ-IQNET) in compliance with UNI EN ISO 9001:2015 standard (production and sale of lighting fixtures and accessories) is an important step towards the improvement of company processes, aimed at achieving customer satisfaction. Please note that the purpose of the EC labelling is to indicate a product's compliance with all applicable standards and to guarantee the right of this product to be marketed directly in all member states of the European Community. The standards to be complied with by lighting fixtures are as follows: 2014/30/UE (EMC : Electromagnetic compatibility "electromagnetic compatibility" - 2014/35/UE (LVD : LOW VOLTAGE DIRECTIVE) "low voltage electrical materials". For more detailed information, please contact our lighting design support centrelighting assistance centre.

**ITALY DISANO**
illuminazione

Disano illuminazione S.p.A., founded in 1957, located in Rozzano (Milan), Has a total production area of 15,000 sqm. The factory is located in Dorno (PV) and covers a floor surface of 100,196 sqm. This area includes the logistics department and the automatic warehouse (16,396 sqm), with an overall capacity of 22,500 pallets. "DISANO" is a leading manufacturer of lighting fixtures, covering all the main market areas.

ITALY Fosnova

Fosnova S.r.l., located in Rozzano (Milan), boasts decade long expertise in architectural lighting design. Currently, Fosnova's production specializes mostly in fixtures utilising LED.

SPAIN **disano** iluminación

Spain-based **ILUMINACION Disano s.a.**, established in 1992, is now located in new headquarters situated in Roda de Barà (Tarragona), and is responsible for distributing the Group's products in the Spanish territory. Additionally, Iluminacion Fosnova has a productive area of approximately 11,850 sqm totally covered, equipped with advanced systems and highly automated. Iluminacion Fosnova's logistics operate on a fully automated area, with an overall capacity of 6360 pallets.

Is also present in PORTUGAL, UK, IRELAND, POLAND, CZECH REPUBLIC, SLOVAKIA, SLOVENIA, CROATIA, BOSNIA AND HERZEGOVINA, MONTENEGRO, SERBIA, MIDDLE EAST, RUSSIA, AFRICA, INDIA and LATIN AMERICA with its own technical support and sales offices.

FRANCE **disano** iluminazione

France-based **Disano FRANCE s.a.**, established in 1993, equipped with a warehouse and customer support offices, is responsible for distributing the Group's products in the French territory.

OUTPUT LUMINOUS FLUX AND POWER

The **luminous flux emitted** by the light source stated by **Disano** in its catalogues may show a tolerance of $\pm 10\%$ with reference to the reported values.

The **W tot** column (except for the emergency versions, of which values are to be provided upon request) indicates the total wattage absorbed by the entire system (LED + driver) and will not exceed 10% of the reported value.

The values reported in the relevant column refer to the luminaire's ambient temperature "**tq**".

* measured according to EN13032-4.

Nominal ambient temperature: **tq** = maximum ambient temperature around the lighting fixture regarding its nominal performance during the normal operation conditions reported by the manufacturer.

LED and traditional lamps

LEDs have a nominal light output of 150 Lumens and can bring remarkable energy savings compared to conventional sources: Discharge lamps with high colour rendering ($R_a > 60$). They can save up to 30-40% in energy costs. When comparing a LED lighting system with a conventional system we need to take into account the fixture's actual Lm/W ratio rather than the source's initial lumens. The Lm/W ratio of any lighting fixture depends on different factors, such as power loss or power variations due to temperature. In discharge lamps these variations cut by half the initial luminous efficiency (expressed in lumen per watt) of sodium or metal halide sources. The products designed by Fosnova, instead, minimize losses and operate efficiency even with traditional technology. The wavelength of light (colour) is adjusted using semiconductor materials and different production processes.

Unlike lamps emitting a continuous spectrum, **LED lights emit monochromatic light of one particular colour to guarantee the emission.**

The influence of heat

Excessive temperature affects the correct functioning of LED lights and reduces their working life. The values concerning lamp life are regarded as reliable after determining the effect of heat on LED sources. In fact, overheated LEDs are more likely to be affected by malfunction and have a shorter life cycle. Therefore, for LEDs to operate properly, guarantee long life (e.g. 50,000 hrs) and a natural degradation of the luminous flux (e.g. L70), they must be designed to evenly dissipate the heat they produce. The nominal performance of LEDs is respected only if their working temperature is not exceeded (T_j). **Fosnova is a competent and responsible company that takes these factors into account and measures real values.**

Thermal Resistance (C°/W): it indicates the difficulty of LED lights to expel heat, which causes the light sources to deteriorate. TR should be very low to guarantee energy efficiency and durability (LM70). A range of products characterized by even lower values will be launched shortly to guarantee improved light levels and longer working life (at present, a minimum of 50,000 hours in certain conditions).

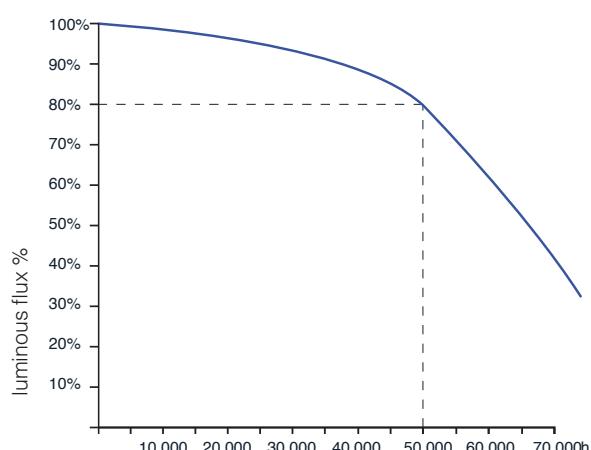

Life expectancy

Firstly, it should be noted that LEDs, unlike traditional sources, will not turn off suddenly when their working life ends, but will slowly fade their initial luminous flux until they turn off completely. In fact, LEDs do not break (except for manufacturing damages) but decay gradually and constantly. The decrease of LED flux, normally after 50,000 hrs, is defined by the working life and is represented by the L80 mark (see charts), which means that the flux is kept up to 80% after 50,000 hrs.

The "B" letter followed by a number ranging between 10 and 50 indicates the quality of the fixture and defines the LED percentage that doesn't keep the declared characteristics when it reaches 50,000 working hours.

EXAMPLE: LED declared L80/B10 = 50,000 hrs

This means that when the LED reaches 50,000 hours of operation, 90% (B10) of the LED will have a luminous flux corresponding to 80% of the initial flux (L80)

Do you want to avoid headaches or eye strain?

Choose fixtures with glare control (**UGR<19** or **UGR<16**) and a good colour rendering (CRI 90) for safe and comfortable lighting levels. Our mind perceives light oscillations at up to 200 Hz. A long-term exposure to high frequencies (between 70 and 160 Hz) can cause discomfort, headaches, visual fatigue and impaired visual performance.

The Low Flicker Mark (LF)

Flicker is the visible flickering effect produced by LED fixtures. It can occur at frequencies below 60 Hz and depends on several factors, such as the ripple of the direct current output of a power supply. By using a quality LED driver, either under bright or soft lighting, flicker can become almost unperceivable.

Apart from people's health, a good flickering index is also very important for ensuring safe lighting environments. Installing low flickering lighting fixtures near TV cameras, today very common both indoors and outdoors, you can obtain better images.

The level of flicker that can be perceived or that is acceptable to human eye may vary. In the presence of a high level of flicker, especially based on perception, optical flicker can generate distress among users and cause a lighting system to be unacceptable from the quality point of view. At present there is no test or verification that can help identify low-flicker optical products.

Fosnova illuminazione can now offer products with proper quality values and be certified with the Low Flicker Mark, allowing easy identification. The Verified Mark is identified with the "Low Flicker" logo that includes a maximum flicker value of 8% at 50 Hz and the 10% at 60 Hz.

"low" does not mean "without", but rather "very low".

UGR

The UGR (unified glare rating) is an international unified measure developed by the CIE (Commission International de l'Eclairage) to assess the direct glare generated by a lighting system.

The European standard regulating the lighting of indoor work places (**UNI-EN 12464-1**) recommends a specific UGR value for different applications ranging between **10** and **30**; **the lower the UGR value, the lower the glare**.

The exact value of this index differs by project type because it depends on the position of the luminaires, room characteristics (dimensions, reflections) and on the point of observation of viewers.

Classification of UGR values by applications

No or imperceptible glare	UGR<13
Very demanding applications	UGR<16
Offices and schools	UGR<19
Industrial applications	UGR<22
Transit areas	UGR<25
High glare	UGR<28

Light control, visual comfort and high energy efficiency are the main requirements of modern control systems. Today, lighting systems must be designed to be easy to install and ensure maximum management flexibility.

Whether it is for indoor areas, public or private offices, commercial or industrial spaces, Fosnova offers a wide range of presence/lighting sensors or motion detectors for any type of lighting project. Our lighting control solutions are simple to install, easy to use and are designed to increase energy savings, visual comfort and safety.

INDOOR LIGHTING SOLUTIONS

BASIC SOLUTION

PLUG & PLAY systems with on-board sensors:

- The lighting fixture is equipped with a sensor (internal or external)
- “PLUG&PLAY” no installation difference with a non-dimmable product
- The installer and the user do not require specific skills because the lighting fixture is configured to change lighting levels automatically
- No additional cabling
- No centralized controls
- No programming and commissioning from specialized technicians
- No remote communication
- Solution with built-in sensors
- Sensors attached to the lighting body and visible
- Programming via app or remote control of sensors or trimmers

MEDIUM SOLUTION

CABLED solutions for DALI dimmable fixtures:

- The lighting fixture is equipped with a DALI PUSH DIM LED driver
- Simple additional cabling and possibility to use a standard NA switch

ADVANCED SOLUTION

High-tech WIRELESS solutions to be managed via app:

- System equipped with smart sensors with high level of automation
- Easy-to-use app and software that do not require skills from specialists (e.g. DALI commissioning or software engineer)
- Built-in or external sensors and, if requested, additional cabling that does not require complex circuitry

SMART - IoT SOLUTION

COMPLEX solutions requiring lighting management hardware and software:

- SMART** solution:
- Wired and wireless solutions
 - System with all fixtures and sensors are managed with the BUS link (or over the air) with the possibility of a limited, but extremely simple, management
 - Possibility to configure via app/smartphone/tablet
 - Suitable for medium-small systems
 - Variable complexity, including situations that may require the intervention of specialized workers (e.g. commissioning)
 - Scalable

IoT solution:

- Device complete with smart technology and hardware infrastructure with software for remote control

BASIC SOLUTION (INDOOR)

Presence and light sensors (ON/OFF) - integrated

RADAR SENSOR ON/OFF

Motion detectors have a wide **DETECTION** range and react to **MOVEMENT**. The sensor **IMMEDIATELY SWITCHES ON** the connected device whenever it senses movement within its scan area, automatically distinguishing between **NIGHT** and **DAY**.

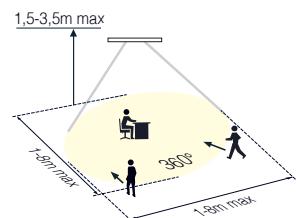

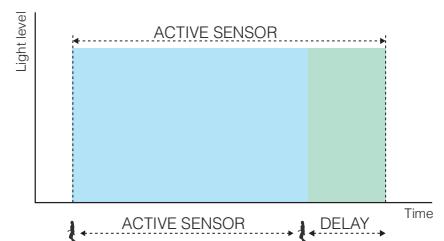

The Fosnova products equipped with RADAR SENSOR must be ordered with subcode -19. The BASIC – PLUG & PLAY solutions do not require additional cabling and special skills to be mounted.

RADAR SENSOR ON/OFF - TECHNICAL SPECIFICATIONS

Power source	220-240V AC - 50/60 Hz	Installing height	ceiling: 1,5-3,5 m
High frequency	5,8GHz CW Radar, ISM band - 0,2 - <10 mW	Rated Load	1200 W (resistive) 300 W (inductive)
Detection area	ceiling: 360°	Power consumption	<0,9 W
Detection distance (adjustable)	ceiling: Ø 1-8 m	Hold time (choice)	min: 10sec (± 3 sec.) max: 12min (± 1 min.)
Detection motion speed	0,6-1-1,5 m/s	Ambient light (choice)	<3-2000 Lux

FEATURES

- High-frequency motion detector for invisible light switching, especially suited for use in lighting fixtures.
- Detection range, twilight value and additional activation time may be set with a potentiometer.
- HF technology: it reacts to very small movements, regardless of temperature; it also sees through walls.
- Extremely short activation time.
- Light only when needed.

BASIC SOLUTION (INDOOR)

Presence and light sensors (DIMM 1/10V) - integrated

RADAR SENSOR DIMM 1/10V

Motion detectors have a wide **DETECTION** range and react to **MOVEMENT**. The sensor **IMMEDIATELY SWITCHES ON** the connected device whenever it senses movement within its scan area, automatically distinguishing between **NIGHT** and **DAY**.

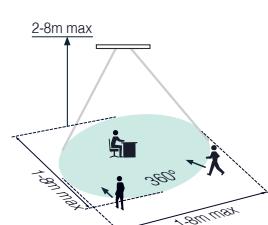

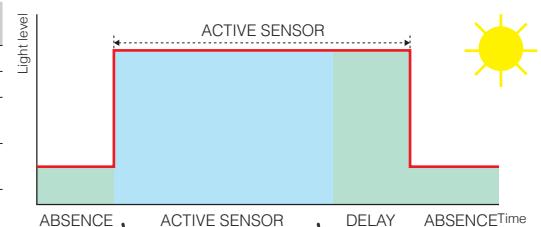

The Fosnova products equipped with RADAR SENSOR must be ordered with subcode -1219. The BASIC – PLUG & PLAY solutions do not require additional cabling and special skills to be mounted.

RADAR SENSOR DIMM 1/10V - TECHNICAL SPECIFICATIONS

Power source	220-240V AC - 50/60 Hz	Rated Load	600 W
High frequency	5,8GHz CW Radar, ISM band - 0,2 - <10 mW	Power consumption	<0,9 W
Detection area	ceiling: 360°	Installing height	ceiling: 2-8m
Detection distance (adjustable)	ceiling: Ø 1-8 m	Ambient light (choice)	2-10-50-2000 Lux
Detection motion speed	0,6-1-1,5 m/s	Hold time (choice)	min: 5sec (± 3 sec.) max: 30min (± 1 min.)
Detection range (choice)	10%-50%-75%-100%	Stand-by period (choice)	10s, 1min, 5min, 10min, 30min, 1H, +∞,0s
		Stand-by DIMM level (choice)	10%-20%-30%-50%

FEATURES

- High-frequency motion detector with dimmer for invisible light switching.
- Dimmable ballast with 1/10V interface.
- Detection range, twilight value and additional activation time may be set with a potentiometer.
- HF technology: 5.8GHz, it reacts to very small movements, regardless of temperature; it also sees through walls.

MEDIUM SOLUTION (INDOOR)

PushDIM (or switchDIM): light control via N.O. pushbutton

Main features:

- The lighting fixture is equipped with a dimmable LED driver DALI with PUSH function (*Note: not all LED DALI drivers on the market have this function*). With a particular connection between the driver and the DALI inlet you can enable functions such as power on/power off/dimming.
- The length of the cable and the number of fixtures that can be connected are virtually endless, but in practice, there is asynchrony in the reply to the power ON and dimming command over distances above 25 metres and if many LED drivers are installed. As a consequence, this type of dimming is recommended in installations such as small offices, small meeting rooms, and generally, where cables are shorter.

The Fosnova products equipped with PushDIM driver must be ordered with subcode -1245. These solutions require simple additional cabling and can be used with standard N.O. switch.

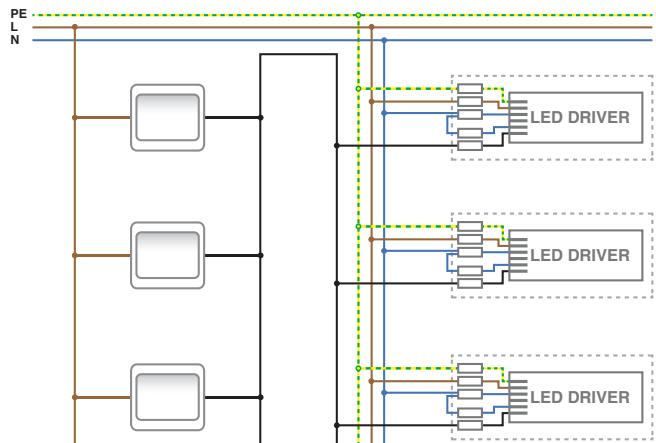

Possible operations:

- Lights are powered on and off with a slight pressure of the button
- Lights are dimmed from off to 100% by holding the button down
- The dimming system is unidirectional, the information flows into one direction only, from the dimmer to the LED driver

SYNCHRONISATION

When installing a new system or replacing a dimmer on an existing system, you may notice that not all dimmers are synchronized between each other. During operation, some dimmers may be turned off while others are on and their dimming level may vary. If you press the switch for more than 10 seconds you will synchronize all dimmers to 50% of luminosity allowing them to start dimming from the same lighting level. This can be done during normal operation anytime you notice that one of the dimmers is not synchronized.

To automatically synchronize all the lights in a system, use the electronic synchronization device: control unit with in-built DALI dimmer and manual switching of DALI fixtures with all standard buttons.

Main features

- Possibility to connect up to four parallel devices to setup multiple control points
- Automatic synchronization of control points
- Length of DALI cable: up to 300 m

Advantages

- Manual and intuitive dimming and switching
- Individual setting of minimum light level
- Suited for a maximum of 25 electronic drivers

Simple installation in standard enclosure

Only one component is required to control the entire lighting system. After connecting it to the mains and to the dedicated cables, the DALI unit is housed inside an enclosure and connected to the ready button.

MEDIUM SOLUTION (INDOOR)

DIMM DALI PRESENCE AND LIGHT SENSORS - NOT INTEGRATED

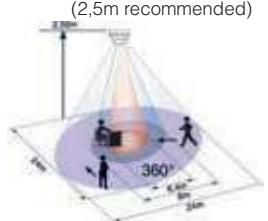

The presence detector adjusts the lights to a preset lighting value based on the people occupying a room and the amount of light at that moment. The integrated lighting sensor constantly measures the level of luminosity in the room and compares this value with the value set by the presence detector.

The DALI versions of Fosnova's products can be used with the PRESENCE detector by ordering with subcode -1241.

MASTER DALI

up to 3,5 m ceiling heights
(2,5m recommended)

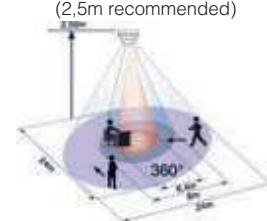

acc. MASTER DIMM DALI - recessed

Presence detector for large areas DIMM DALI.

up to 3,5 m ceiling heights
(2,5m recommended)

acc. MASTER DIMM DALI - ceiling

Presence detector for large areas DIMM DALI. IP54 version with connection.

- Presence detector for **large scan areas** to adjust electrical lights based on the available daylight
- DALI interface for digital dimmable control as a group
- Possibility to switch from DALI with a remote control
- Enlargement of scan area with Slave units
- Possibility to activate lights manually through the touch of a button
- Further functions can be set with optional remote control

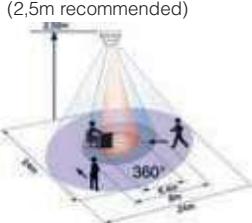

TECHNICAL SPECIFICATIONS FOR MASTER DALI

Mains voltage	110-240 V AC , 50 / 60 Hz
Power consumption	0,9 W
IP degree	recessed = IP20 - ceiling = IP20 / Class II
DALI	max. 50 electronic ballast
Brightness	10 - 2000 Lux
Ambient temperature	from -25 °C to +50 °C
Channels	Channel 1
Time setting	1 - 30 min

SLAVE DALI

up to 3,5 m ceiling heights
(2,5m recommended)

acc. SLAVE DIMM DALI - recessed

Presence detector for large areas DIMM DALI.

up to 3,5 m ceiling heights
(2,5m recommended)

acc. SLAVE DIMM DALI - ceiling

Presence detector for large areas DIMM DALI. IP65 version with connection.

- **To enlarge the scan area of a Master device;**
- Activation of the Master device if motion is detected regardless of the room's lighting

TECHNICAL SPECIFICATIONS FOR SLAVE DALI

Mains voltage	110-240 V AC , 50 / 60 Hz
Power consumption	0,2 W
Detection area	vertical: 360°
IP degree	recessed = IP20 - ceiling = IP54 / Class II
Ambient temperature	from -25 °C to +50 °C
Impulse response	2 sec or 9 sec

Accessories available on request for MASTER DALI

IR-DIM-DALI

(Ø200 x 90)

IP54 CONNECTION

Accessories available on request for SLAVE DALI

(Ø200 x 90)

IP65 CONNECTION

ADVANCED SOLUTION (INDOOR)

BASICDIM WIRELESS SYSTEM

The wireless lighting management system is made up of the LED module inside the lighting system, the 24V constant voltage driver or DALI and one of the basicDIM Wireless modules. The command profiles are saved at the factory. The lighting can be controlled via 4remote BT app or user interface. The Bluetooth connection allows controlling, in an easy and practical way, up to 250 light points, turning them on, off, dimming their intensity, grouping fixtures and creating lighting scenes. The **basicDIM Wireless**, is the ideal solution to make the lighting more modern without construction work. The usage area is substantially unlimited.

Advantages for lighting manufacturers:

- Easy configuration
- Definition of the properties for the lighting fixtures
- Wireless assignment of the properties to lighting fixtures

Advantages for the commissioning technician:

- Starting, programming and control of lighting fixtures in an easy way thanks to the app
- Easy location and wireless assignment of lighting fixtures
- Easy system adjustment

Advantages for the building operator:

- Easy updating
- Reduction of energy consumption
- Possibility of multifunctional use of rooms
- Wireless adjustment of the individual lights

Advantages for the user:

- Individual functioning of the individual lighting fixture
- Easy graphical selection of the lighting fixture
- Intuitive selection of light tone and brightness

Options for use

Settings selection

Rapid access to the settings saved and adjustments based on the use expected for the room

Colour temperature adjustment

Individual adjustment of the light tone based on the lighting fixtures used

Dimming option

from 1% to 100%

Presence detection

Basic lighting according to requirements through the integration of sensors

Planning

Support for planning tasks thanks to internal clocks and calendars

Personalization

Adjustments to adapt to the changing usage requirements or to expand the system

System with group circuits

Control of individual fixtures and groups of fixtures that can be adjusted at any time based on usage requirements through the 4remote BT app. Easy to expand thanks to wireless installation.

ADVANCED SOLUTION (INDOOR)

Modules for basicDIM wireless system - for indoor applications

System architecture

The system is made up of hardware and software modules. Communication with fixtures and sensors occurs via radio frequency (wireless) solutions.

basicDIM Wireless Module

The basicDIM Wireless module allows convenient, wireless interaction with luminaires, including configuration as well as commissioning and actual use. Easy control via Bluetooth is already visible on the compact user interface. The lighting control system can also be operated via the 4remote BT App.

- Wireless command with Android/iOS devices
- Automatically creates a wireless communication network with max. 127 nodes
- Possibility to configure analogue/digital output
- Analogue output: 0 – 10 V / 1 – 10 V decreasing/increasing
- Digital output: DALI compatible

FEATURES:

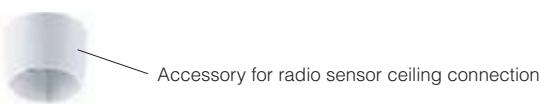

- Power Voltage: 220/240 V
- Frequency: 50/60 Hz
- Maximum Radio Receiver Output Power: +4 dBm
- Ambient Temperature: -20 ÷ +50 °C
- Protection Class: IP20

basicDIM Wireless radio sensor

The basicDIM Wireless Sensor offers daylight-dependent lighting control and presence detection. It has been designed for the following principal applications: open-plan offices, training / presentation rooms, corridors, passageways and garages

- Command based on surrounding luminosity and presence
- Wireless control with Android/iOS devices
- Passive IR sensor technology
- Including shutter to optimize sensor scanning range

FEATURES:

- Power voltage: 220/240 V
- Frequency: 50/60 Hz
- Mounting height: max. 4 m
- Scan range (mounting height: 3 m): Ø 8 m
- Detection angle: 53°
- Lighting measurement on the head of the sensor: 1 – 2000 lx (± 20 %)
- Radio receiver operating frequency: 2.4 – 2.483 GHz
- Ambient temperature: 0 ÷ +50 °C
- Protection class: IP20

basicDIM Wireless vUser Interface

basicDIM Wireless User Interface is a wireless user interface that brings huge flexibility to interior design as furniture can be replaced or even walls can be rebuilt without having to take wiring of switches or switch placement into account.

- Control of all basicDIM Wireless devices
- Control of colour temperature
- Pre-set buttons:
 - Control of individual lighting fixture / Control of groups of lighting fixtures / Control of all lamps
 - Saving of light scenes / Savings of animations
- Multi-use button:
 - Variation of colour temperature with 25 Kelvin increases
 - Change of indirect/direct ratio

FEATURES:

- Radio receiver operating frequency: 2.4 – 2.483 GHz
- Max. radio receiver output power: +4 dBm
- Radio signal capacity: up to 60 m
- Ambient temperature: 0 ÷ +45 °C
- Protection class: IP20

4remote BT app

The free app comes with a wireless basicDIM solution in all the development phases. Every operation can be done with an extraordinary comfort in an easy and quick way, starting from the installation and commissioning processes of the lighting fixtures to their daily use.

To be able to control basicDIM Wireless enabled luminaires, they must be integrated (paired) into a network. This is done via the 4remote BT-App. All settings are stored in the network, for example, names, pictures, groups, timers, scenes and switch settings. If a unit is removed (unpaired) from a network, it will no longer have the network specific settings. If a basicDIM Wireless unit is not part of any network, 4remote BT App will automatically display a pop-up window to add the unit to a network. The functionality of the devices can be selected through profiles which can be selected if a device is in an unpaired state.

FEATURES

- On and off of fixtures individually or in group
- Adjustment of the intensity of fixtures individually or in group
- Adjustment of lighting tone and colour
- Starting, programming and control of lighting fixtures
- Location, addressing and assigning of lighting fixtures

± 10% input VOLTAGE	The LED lamp can work with a voltage input range that may vary by ± 10% from the indicated value
EXAMPLE: LED GU10 SMD 6W	
Input voltage	
AC100-240 V	±10% ↔ AC90-265 V

Fixture built with recyclable materials (excluding lamps and batteries).

Energy saving fixtures.

Electronic power supply.

Lighting fixtures wired with dimming electronic power supply.

Lighting fixtures equipped with digital dimmable electronic power supply.

Lighting fixtures equipped with electronic power supply and emergency kit (SA).

UV-stabilised coating, anti-yellowing. Fixture built with stabilised materials.

Maximum track lead 32A load

Maximum track lead 16A load

Aiming on horizontal axis at 0°

Aiming on vertical axis at 0°

Coloured or specific filter installation possibility.

LED FULLCOLOR

In the FOSNOVA catalogue, there are some items, generally the more recent ones, that have two numbers (a subcode) at the end of the classical 6-digit code. These subcodes indicate the product type of wiring. Therefore, it is very important when making an order to write the complete FOSNOVA code, including the subcode, which carries the following meaning:

baffle film protection

The unit is supplied with lampholder only

With conveyor

Electronic power supply with 230/240V - 50/60Hz + LED

Size of round hole for recessed installation

Electronic power supply with 230/240V - 50/60Hz + fuse

Size of hole for recessed installation

Electronic power supply with 230/240V - 50/60Hz + emergency kit

Mains voltage 230V operated with transformer.

Electronic power supply with 230/240V - 50/60Hz + LED + fuse

Extra wide beam

Electronic power supply with 230/240V - 50/60Hz + fuse + emergency kit

Wide beam

Electronic power supply with 230/240V - 50/60Hz + LED + fuse + emergency kit

Medium beam

Electronic digital dimmable power supply with 230/240V - 50/60Hz (DALI)

Narrow beam

Electronic digital dimmable power supply with 230/240V - 50/60Hz (DALI) + emergency lighting

Asymmetric beam

Electronic digital dimmable power supply with 230/240V - 50/60Hz (DALI) + LED

Both direct and indirect light

Electronic digital dimmable power supply with 230/240V - 50/60Hz (DALI) + fuse

Fixtures to be installed to the wall or ceiling only with a base.

Electronic digital dimmable power supply with 230/240V - 50/60Hz (DALI) + LED and fuse

Fixtures to be installed on track to the wall, ceiling or suspension.

Fixtures to be installed to the wall, ceiling or suspension.

Presence and light sensor: an automatic, easy-to-use, safe and practical sensor. a completely new energy-saving device, equipped with a high level of sensitivity.

Time spent in front of the screen: more than 6 hours continually - Optics + UNI EN 12464

International Protection

The IP prefix followed by two figures indicates the level of resistance of the fixture to penetration by solids and liquids. Protection rating (published in EN60529)

- 1stfigure:** penetration by solid particles and contact with live parts
- 2ndfigure:** penetration by liquids
- 3rdfigure:** mechanical resist IK.

IP20

Protection against solid bodies Ø > 12 mm only

IP23

Protection against solid bodies and rain

IP40

Protection against solid bodies Ø > 1 mm only

IP43

Protection against solid bodies Ø > 1 mm and rain

IP44

Protection against solid bodies Ø > 1 mm and water sprays

IP54

Protection against dust and water sprays

IP55

Protection against dust and water jets

IP65

Dust and water tight

IP66

WATERPROOF FIXTURES

Polycarbonate fixtures are IP65/66 water-resistant if installed at temperatures not exceeding 45°C. Direct exposure to sunlight can easily cause the temperature to exceed 45°C, which affects the degree of protection. However, it is recommended that these fixtures are used properly without altering their mechanical and protection properties (IP65/66); **they should not be installed on surfaces subject to strong vibrations, outdoors on ropes or stakes;** whenever this is necessary, waterproof steel fixtures should be used.

RG0

Risk Group 0 (RG0): luminaires are exempt from photobiological risks in compliance with standard EN 62471. If necessary, contact our customer service for the observation distance.

RG1

Risk Group 1 (low risk group): luminaires do not pose any risks due to normal behavioural limitations of a person when exposed to a light source.

Risk Group 2 (intermediate risk group): luminaires do not pose any risks due to people's aversion response to very bright light sources or due to thermal discomfort.

The UGR (unified glare rating) is an international unified measure developed by the CIE to assess the direct glare generated by a lighting system. The European standard regulating the lighting of indoor work places (**UNI-EN 12464-1**) recommends a specific UGR value for different applications ranging between **10 and 30**; **the lower the UGR value, the lower the glare.**

Indicates that a product can freely circulate within the European Comité de l'équivalence. It certifies that the product complies with essential safety regulations. All Fosnova products comply with the "electromagnetic compatibility" (2014/30/UE) and with the "low-voltage electrical materials" (2014/35/UE) standards.

The product has been granted the ENEC European certificate of conformity which replaces all national **regulations in the EEC**, according to EN60598 European standards

ENEC European Certificate of Conformity:
PENDING APPROVAL

I.M.Q. approval for wired fixture. All fixtures comply with **CEI Italian** safety standards corresponding to EN60598 European standards.

Class II fixture (double insulation). No grounding needed.

Class II fixture (double insulation). No grounding needed.

V0: the test piece extinguishes within 5 sec. without dropping V2: the test piece extinguishes within 25 sec. (dropping allowed)

LED Life expectancy
The decrease of LED flux is defined by the working life and is represented by the "L" mark (for example L70 which means that the flux is kept up to 70%). The "B" followed by a number ranging between 10 and 50 indicates the quality of the fixture and defines the LED percentage that doesn't keep the declared characteristics.

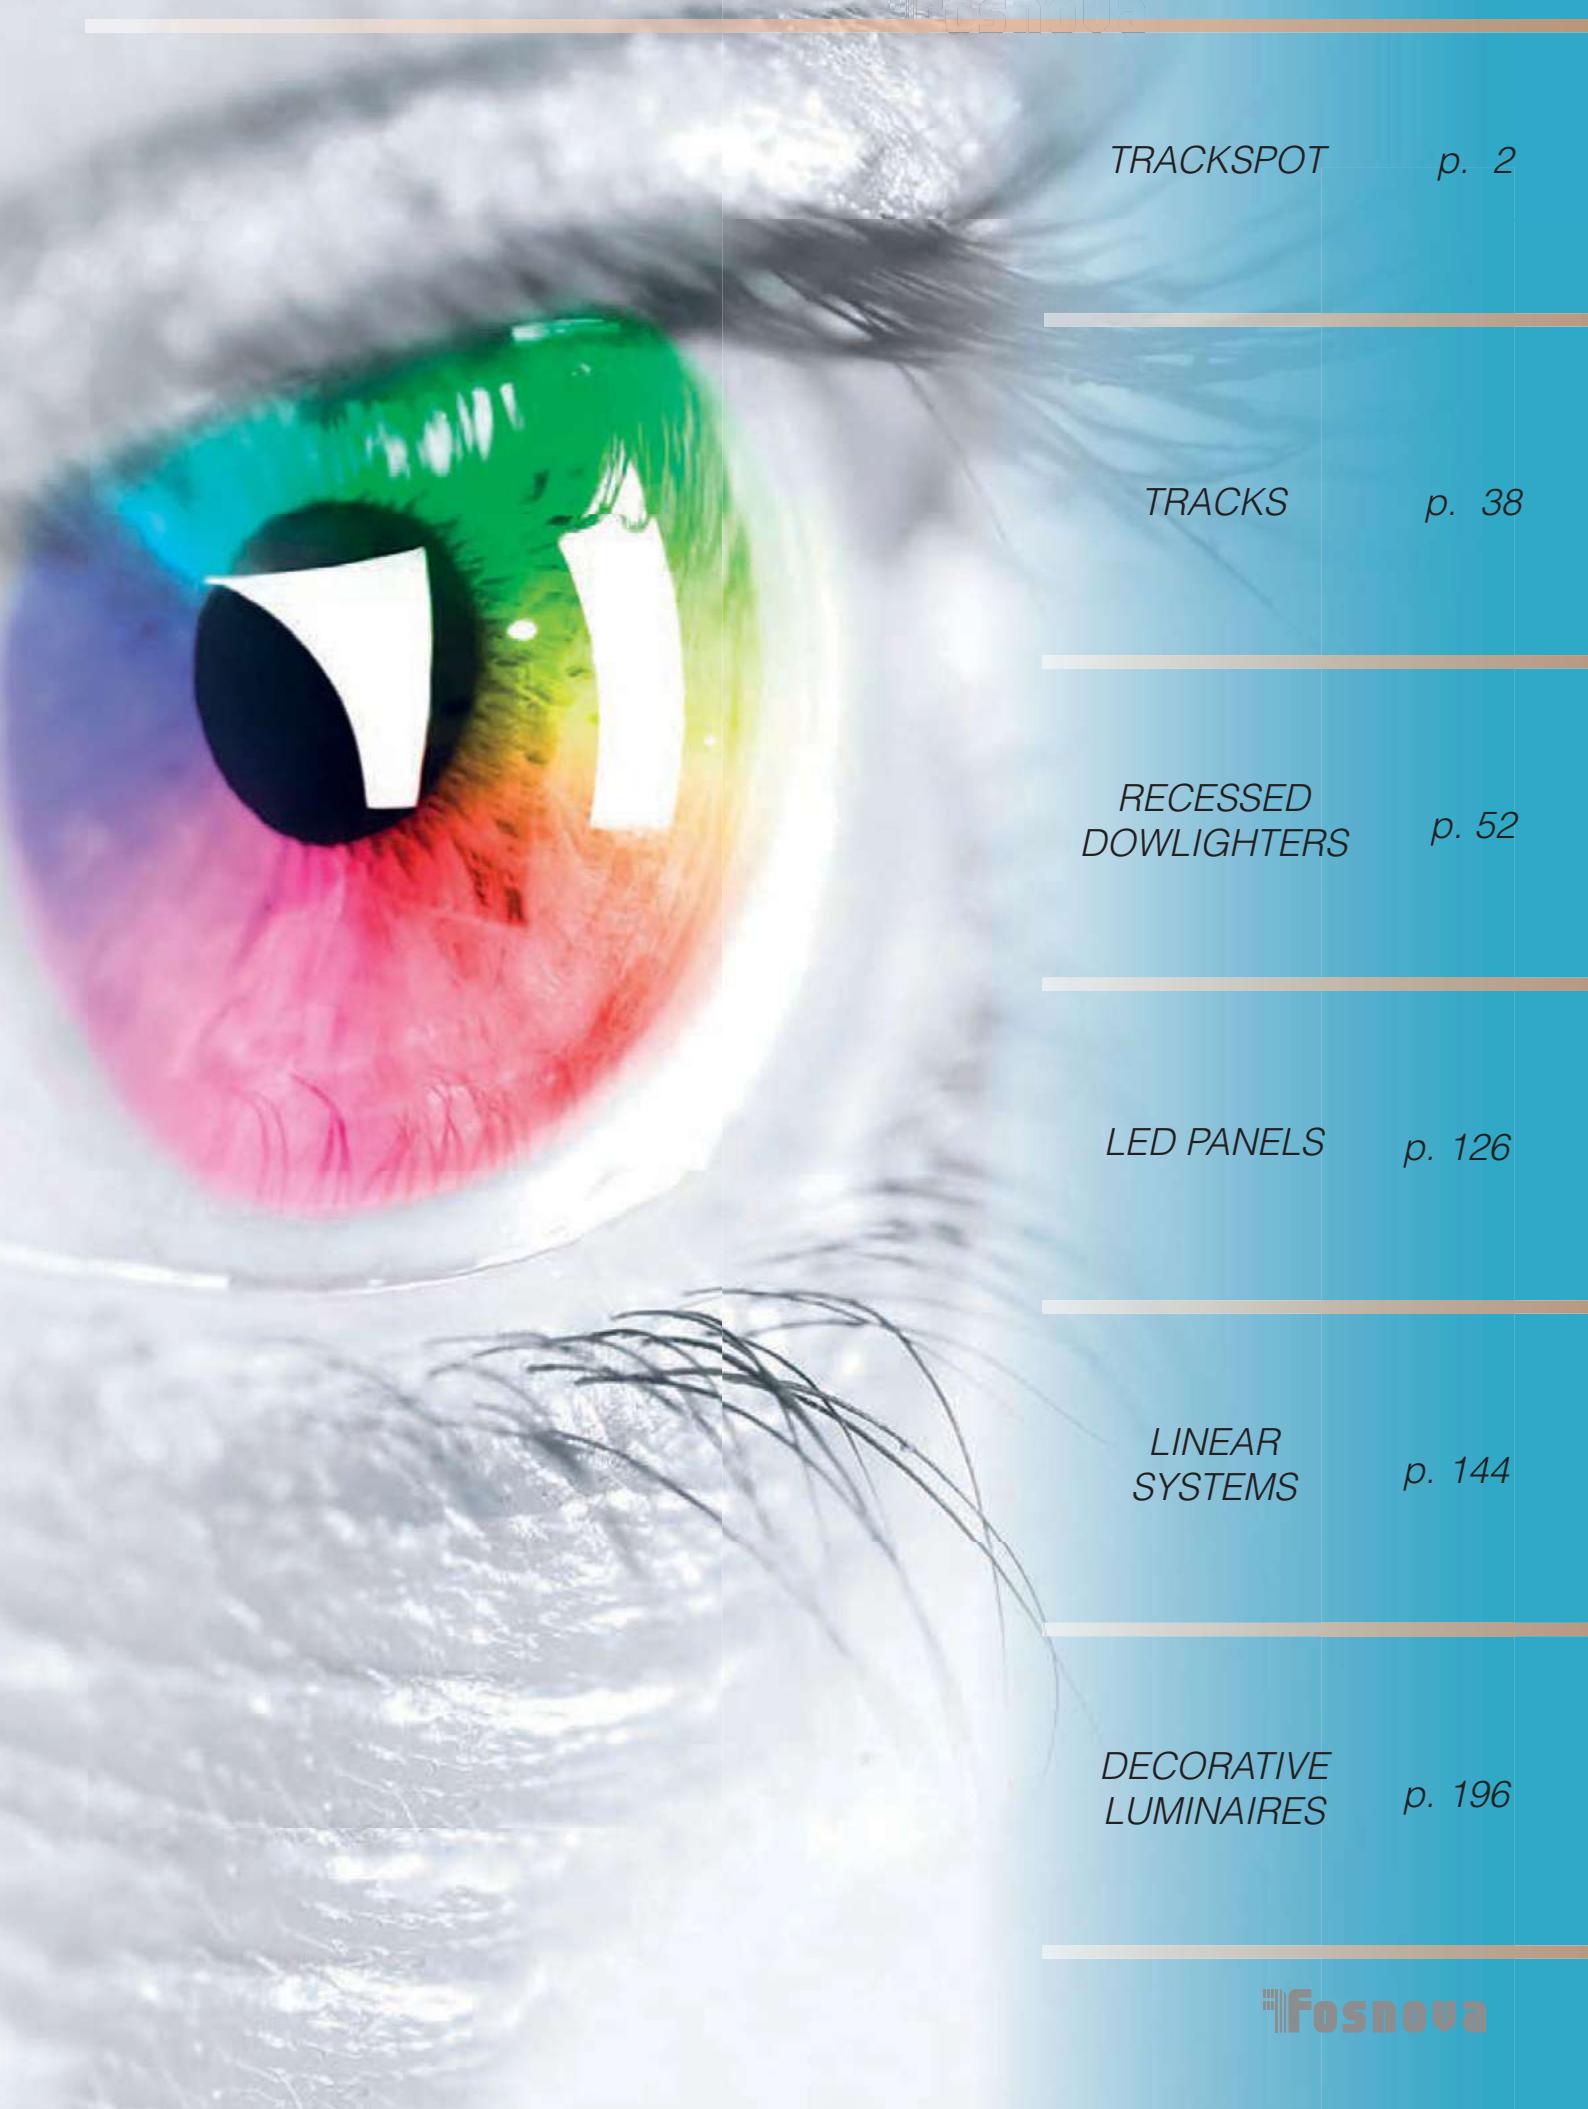

Low Flicker: product with a very low flicker; uniform light for greater eye protection.

The Colour Rendering Index (CRI) indicates how truthfully the artificial light source is able to reproduce the colours of objects. It varies from a range of **0 to 100**, where **0 represents the minimum** and **100 is the maximum**.

LED: high-efficiency light **LED VIVID** sources (CRI>95). The LED series was designed with a new technology that ensures uniform colour saturation. This is why these lamps are particularly suited in settings where reflections, transparencies, good colour and white quality are very important.

Kripton LED is Fosnova's new completely adjustable track-mounted spotlight equipped with a universal adapter: it is the perfect product for a tailor made lighting system that can enhance any setting.

Equipped with a reflector in efficient high-gloss aluminium, it comes with latest generation LEDs they guarantee long lamp life (50000 hours) and excellent flux maintenance.

The new LED spotlights enable designers to create even more sophisticated and especially low energy lighting systems.

Housing: in die-cast aluminium.

Reflector: in die-cast polished aluminium, high efficiency and anti-glare.

Coating: UV-resistant polyester epoxy powder coating.

Equipment: adjustable around its vertical axis from 0° to 355°

Standard: manufactured pursuant to EN 60598-1-CEI 34.21 and with a degree of protection pursuant to EN 60529.

LED: high-efficiency light sources (**CRI>95**).

Luminous flux maintenance 80%: **50.000 h (L80B20)**.

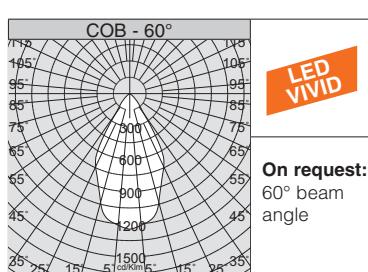

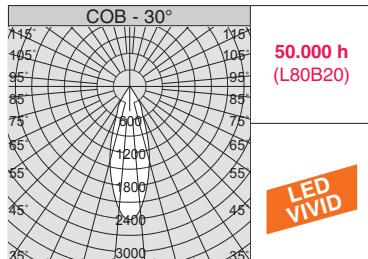

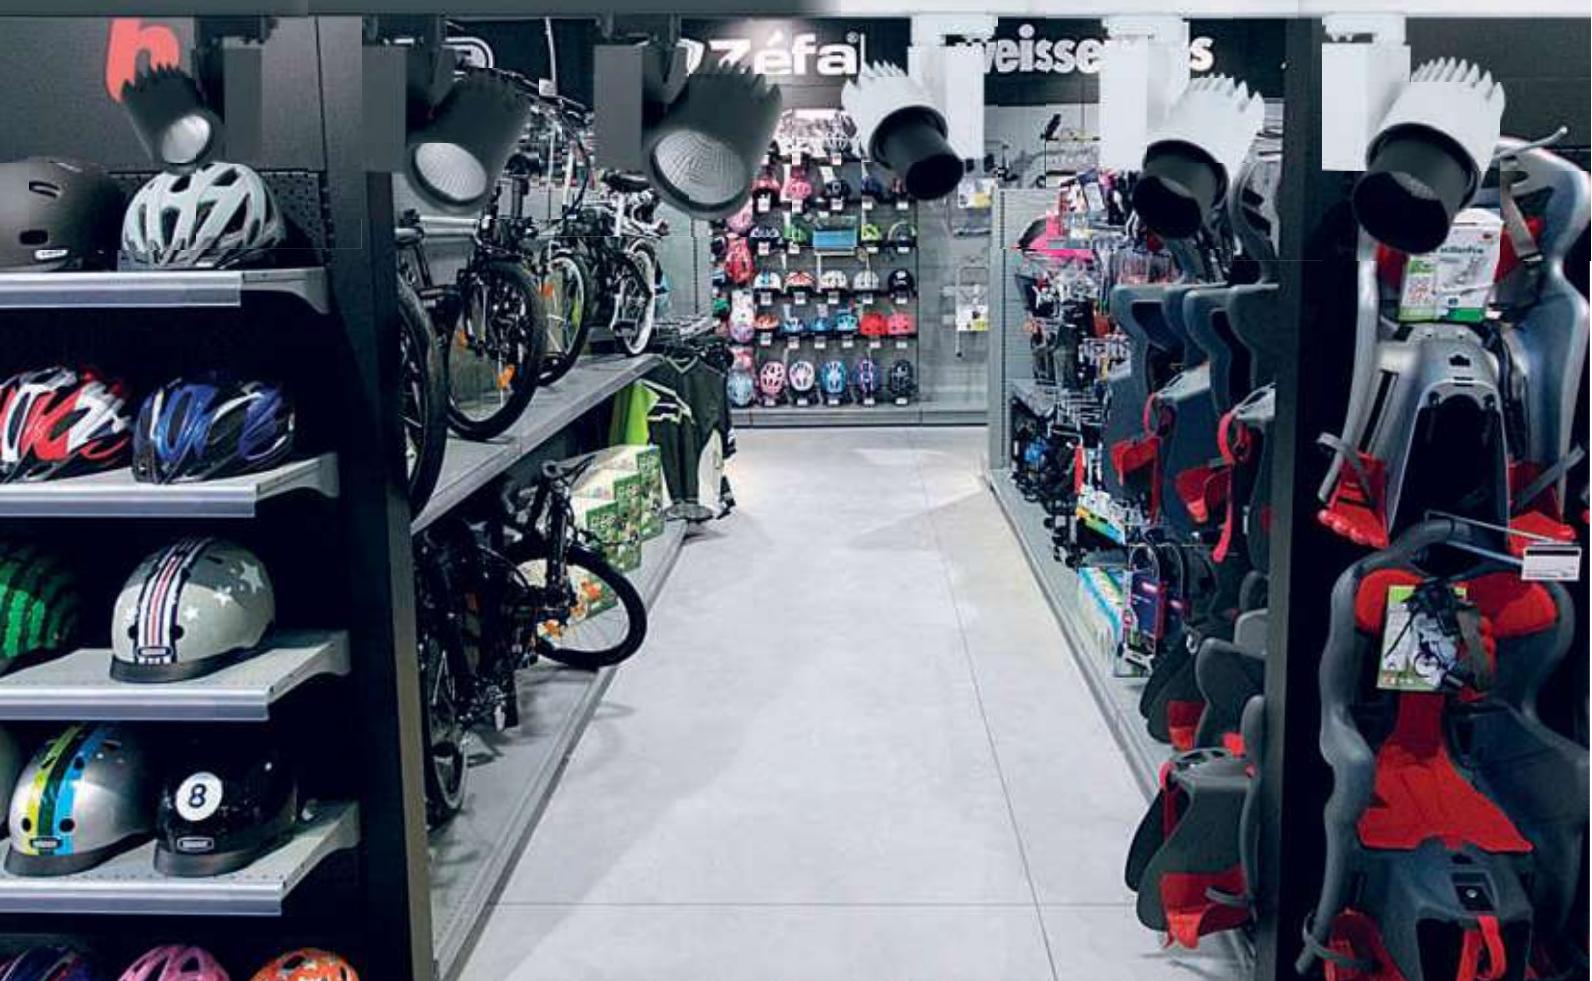

Power factor >0.9.

Photobiological safety class: exempt group.

The right lighting and fixture play a vital role in facilitating sales. This is the reason why LED fixtures with a **CRI>90** are being requested. Therefore, the current trend is geared towards the manufacturing of more flexible fixtures, which also emit an excellent quality of light, while guaranteeing remarkable energy savings and lower maintenance costs.

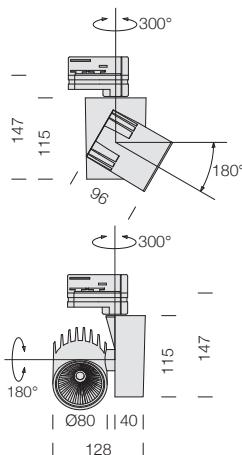

The Colour Rendering Index (**CRI**) indicates how truthfully the artificial light source is able to reproduce the colours of objects. It varies from a range of **0 to 100**, where **0 represents the minimum** and **100 is the maximum**. Daylight is the best source of light from a physiological point of view because it contains the full colour spectrum. Therefore, a lamp with a high colour rendering index is very important to ensure the wellbeing and comfort of the occupants of a room and it is absolutely necessary in rooms where good visibility is required.

Colour is a key factor in enticing consumers to buy. Therefore the lighting of points of sale must improve the viewing of the wares on display. This result can be obtained only with wide-beam light sources capable of ensuring a correct viewing of colours. Fashion is created to satisfy the lighting needs of showrooms and every other space requiring accent lighting.

Main characteristics:

- An elegant and modern design combined with versatility and adjustability ensures seamless installation in any architectonic setting.
- Very high light and energy performance thanks to the use of latest generation LED.
- Excellent rendering of colours and whites, as well as outstanding colour uniformity.
- Available in two versions:
 - with reflector in aluminium with lenticular lens surface capable of improving the distribution of light without reducing optical rendering and therefore the fixture's efficiency;
 - with high-efficiency lenses in PMMA that guarantee a uniform and well-defined light beam for maximum visual comfort;

Housing: in die-cast aluminium.

Version with reflector: in die-cast polished aluminium, high efficiency and anti-glare.

Version with lens: in PMMA with high efficiency output and very low glare rate

Coating: power-coated with a UV-resistant polyester epoxy paint.

Regulations: manufactured in accordance with EN 60598-1-CEI 34.21 standards. Degrees of protection in accordance with EN60529 standards.

LED: high-efficiency light **LED VIVID** sources (CRI>95). The LED series was designed with a new technology that ensures uniform colour saturation. This is why these lamps are particularly suited in settings where reflections, transparencies, good colour and white quality are very important.

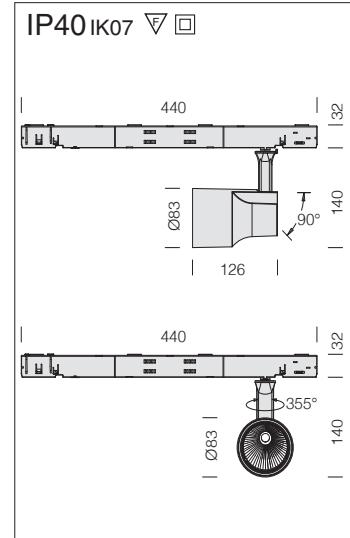

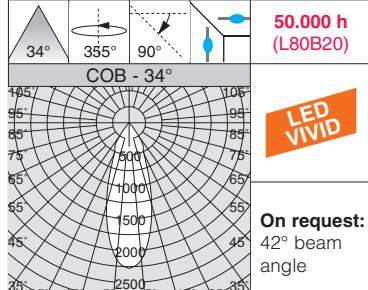

DALI versions: to be used with **OMNITRACK PLUS** track-mounted system.

LED: high-efficiency light sources (**CRI>95**).

Luminous flux maintenance 80%: **50.000 h (L80B20)**.

Power factor >0.9.

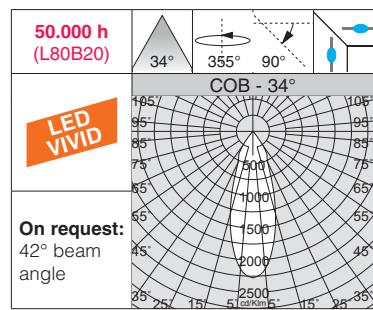

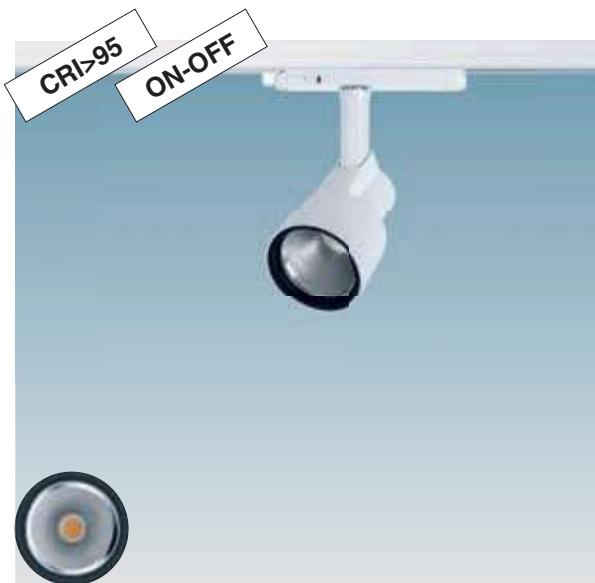

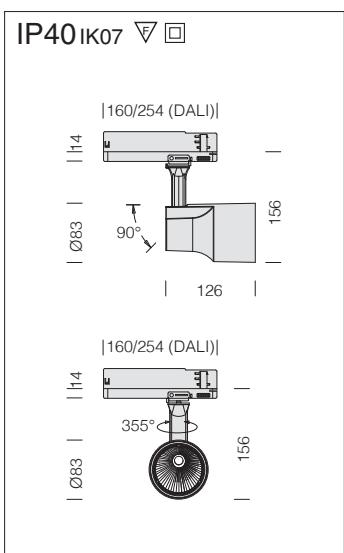

Photobiological safety class: exempt group.

The primary goal of indoor lighting is to enhance visual wellbeing, aesthetic quality and energy savings. The new LED sources allow high luminance levels and excellent colour rendering. The new Asso spotlights are perfect for all spaces where the rendering of reflexes, transparencies, whites and colours is important. Each version offers maximum lighting quality and an extraordinary colour rendering (CRI 95).

Housing: in die-cast aluminium.

Reflector: in die-cast polished aluminium, high efficiency and anti-glare.

Standard supply: supplied with universal adapter.

Coating: power-coated with a UV-resistant polyester epoxy paint.

DALI versions: to be used with **OMNITRACK PLUS** track-mounted system.

LED: high-efficiency light sources (**CRI>95**).

Luminous flux maintenance 80%: **50.000 h (L80B20)**.

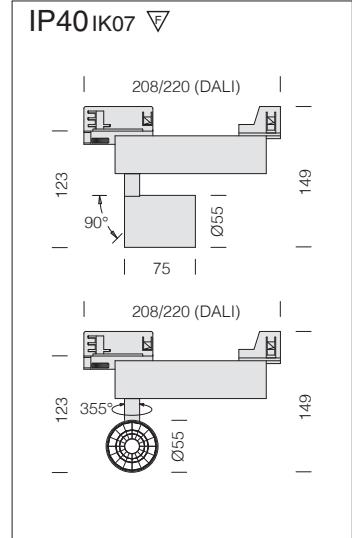

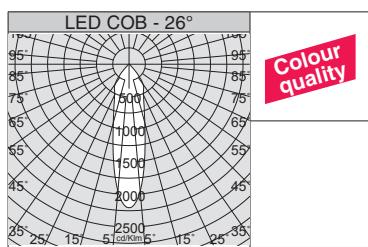

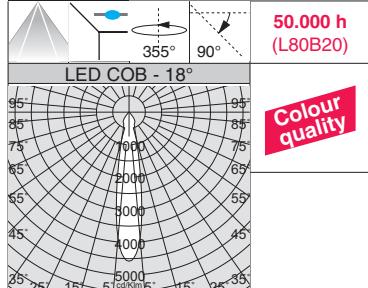

Power factor >0.9.

Photobiological safety class: exempt group.

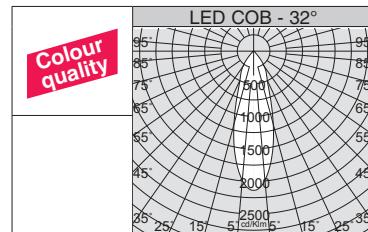

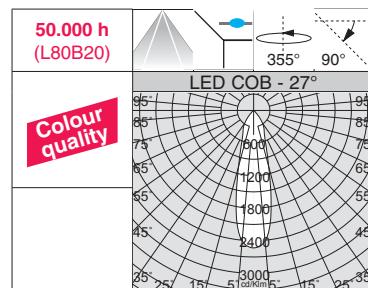

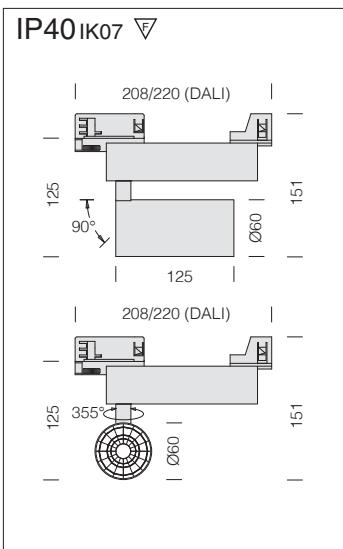

The right lighting and fixture play a vital role in facilitating sales. This is the reason why LED fixtures with a **CRI>90** are being requested. Therefore, the current trend is geared towards the manufacturing of more flexible fixtures, which also emit an excellent quality of light, while guaranteeing remarkable energy savings and lower maintenance costs.

The Colour Rendering Index (**CRI**) indicates how truthfully the artificial light source is able to reproduce the colours of objects. It varies from a range of **0 to 100**, where **0 represents the minimum** and **100 is the maximum**. Daylight is the best source of light from a physiological point of view because it contains the full colour spectrum. Therefore, a lamp with a high colour rendering index is very important to ensure the wellbeing and comfort of the occupants of a room and it is absolutely necessary in rooms where good visibility is required.

Vision is a family of floodlights covering the widest range of sources and lighting design needs for perfect optical control of the light beams. A series of fixtures designed to satisfy the most widely differing architectural lighting and display needs, with performance in mind and using the most innovative light sources to ensure excellent visual comfort. The highest performance components are contained in an extruded aluminium housing with through chambers which permit optimised heat exchange by conductive and convective dispersion thus increasing the performance and reliability of the floodlights. The movable L-shaped supporting rod permits optimised balancing of the fixture whatever its configuration.

The direction can be precisely controlled and the light beam accurately aimed using the radial micrometric scale.

When a product maintains the same aesthetic design, it becomes increasingly important to have various types of light source to choose from. Vision has thus been created to satisfy any need. In fact, a single housing guarantees application continuity even when using different optical units and lamps, and is ideal for use in places where - when accent lighting is required - the quality of the light output must be differentiated.

Housing: die-cast aluminium with cooling vents.

Coating: power-coated with a UV-resistant polyester epoxy paint.

Regulations: manufactured in accordance with EN 60598-1-CEI 34.21 standards. Degrees of protection in accordance with EN60529 standards.

LED: high-efficiency light sources (**CRI>95**).

Luminous flux maintenance 80%: **50.000 h (L80B20)**.

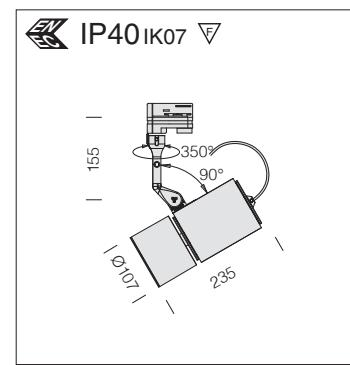

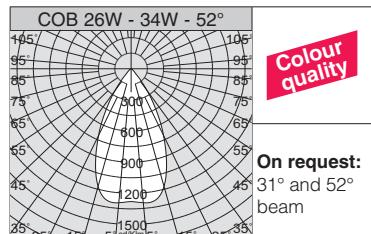

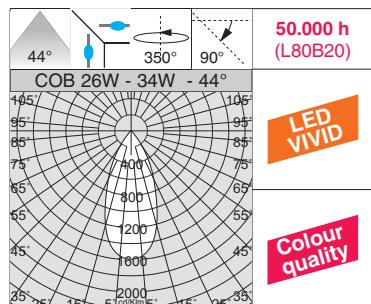

Power factor >0.9.

Photobiological safety class: exempt group.

The right lighting and fixture play a vital role in facilitating sales. This is the reason why LED fixtures with a **CRI>90** are being requested. Therefore, the current trend is geared towards the manufacturing of more flexible fixtures, which also emit an excellent quality of light, while guaranteeing remarkable energy savings and lower maintenance costs.

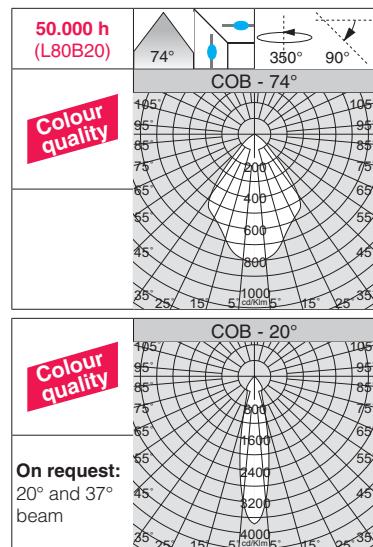

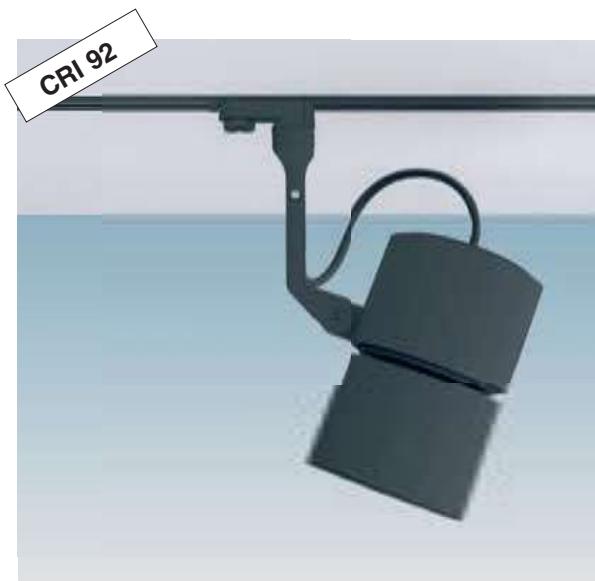

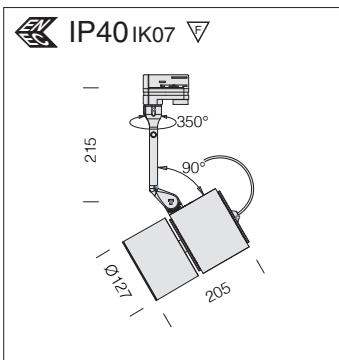

The Colour Rendering Index (**CRI**) indicates how truthfully the artificial light source is able to reproduce the colours of objects. It varies from a range of **0 to 100**, where **0 represents the minimum** and **100 is the maximum**. Daylight is the best source of light from a physiological point of view because it contains the full colour spectrum. Therefore, a lamp with a high colour rendering index is very important to ensure the wellbeing and comfort of the occupants of a room and it is absolutely necessary in rooms where good visibility is required.

This version features a particular shape and a design with clean lines that can meet different architectonic lighting needs using high colour rendering LEDs. It is an all-new spotlight, which is entirely adjustable for an extraordinarily effective lighting project that adds value to any space and object.

Housing: in die-cast aluminium.

Optic compartment: front in black polycarbonate (the white colour version is available upon request).

Lens: in PMMA with high efficiency output and very low glare rate.

Equipment: supplied with universal adapter in track mounted versions.

LED: high-efficiency light sources (**CRI 90**).

Luminous flux maintenance 80%: **50.000 h (L80B20)**.

Power factor >0.9.

Photobiological safety class: exempt group.

The right lighting and fixture play a vital role in facilitating sales. This is the reason why LED fixtures with a **CRI>90** are being requested. Therefore, the current trend is geared towards the manufacturing of more flexible fixtures, which also emit an excellent quality of light, while guaranteeing remarkable energy savings and lower maintenance costs.

The Colour Rendering Index (**CRI**) indicates how truthfully the artificial light source is able to reproduce the colours of objects. It varies from a range of **0 to 100**, where **0 represents the minimum** and **100 is the maximum**. Daylight is the best source of light from a physiological point of view because it contains the full colour spectrum. Therefore, a lamp with a high colour rendering index is very important to ensure the wellbeing and comfort of the occupants of a room and it is absolutely necessary in rooms where good visibility is required.

Omnitrack PLUS - DIMM - 6 conductors

S		
colour	L	code
white	1500	22013310-00
	3000	22013313-00

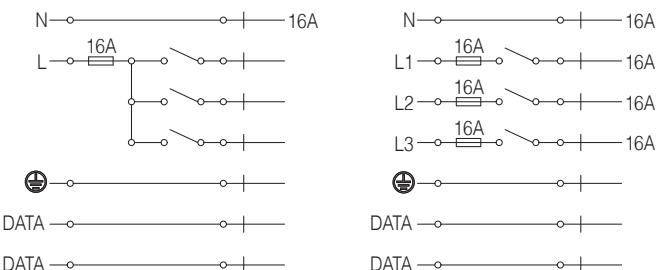

Omnitrack PLUS 6 conductors: the Omnitrack PLUS track-mounted system is a mixed three-phase system with two additional cables for the management of other signals (for example DALI, DMX, etc).

For direct ceiling or wall mounting, use the slots in the track (**fig.1**).

For suspension mounting with accessories, do not exceed the maximum loads indicated (**fig.2**).

For cable layout, follow the wiring diagrams as shown below:

DIMM - DALI Power adapter
white 22093615-00
To be used for the dimming of track-mounted spotlights (standard 1-10V).

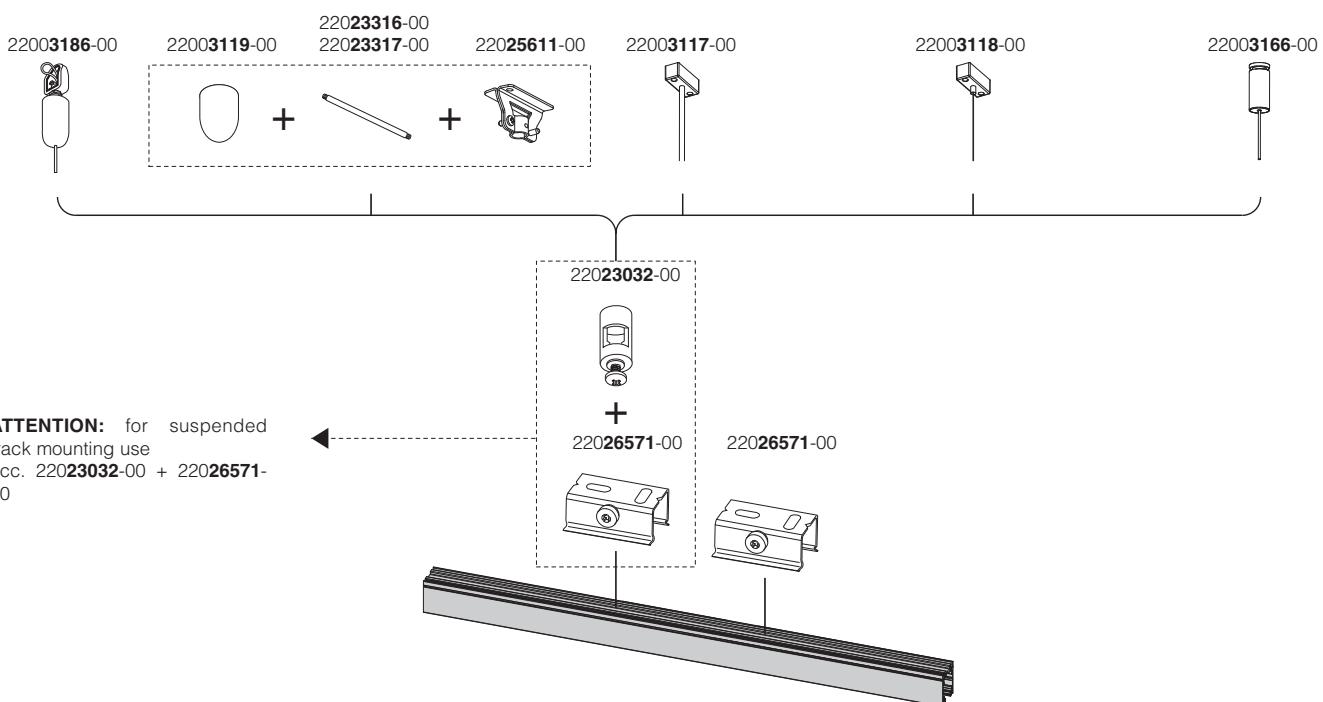

Asymmetric power adapter - 6 poles
white 22093810-00
To be used for the dimming of track-mounted spotlights (standard 1-10V).

Mechanical adapter
white 22025704-00
To be used with floodlights weighing more than 6 kgs. We recommend its use for mounting floodlights on a wall track.

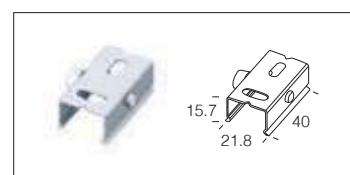

DIMM power adapter+mechanical adapter
white 22093715-00
Packaging complete electric + mechanical adapter.

Accessories with possible combinations for suspension/ ceiling mounting

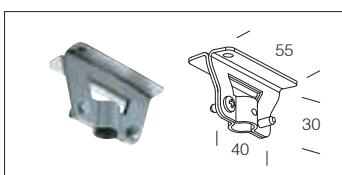

Suspension attachment	
steel	22023032-00
With millimetre adjustment device. For suspended track mounting use with acc. 22026571-00.	

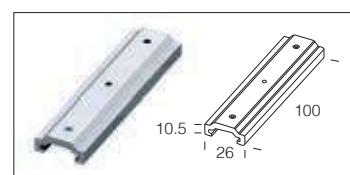

Ceiling Connection	
steel	22026571-00
Device to fasten track to the ceiling or wall, also helps slide the track along its axis.	

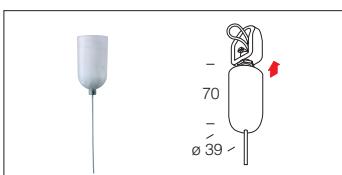

Suspension attachment	
steel	22025611-00
For suspension installation using a Ø10 rod. Max load: 30 kgs. Use with acc. 22003119-00.	

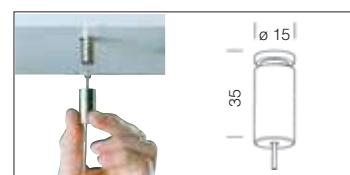

bracket	
aluminium	22026619-00
It permits mechanical connection of track. Use with acc. 22026218-00.	

Ceiling suspension	
white	22003186-00
With steel wire (l = 1.5 m) and millimetre adjustment device. Max load: 20 kg.	

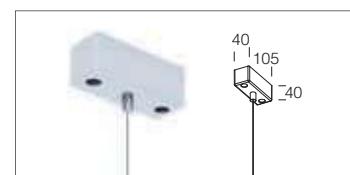

Suspension	
galvanised	22003166-00
Supplied with steel wire (l=1,75m) and millimetre adjustment device. Max load: 20 kg.	

Suspension with rods	
white	22003117-00
Complete with rods. Max loading: 30Kg. Length: 50cm - Ø10 mm.	

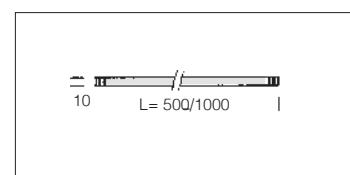

Suspension with wire	
white	22003118-00
Complete with steel wire (l = 100 cm) and millimetre adjustment device. Max load: 20 kg.	

Ceiling rose for suspension rod	
white	22003119-00
Finishing cup to be applied with Ø 10 rods. Use with acc. 22025611-00.	

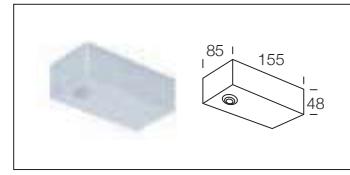

Rods Ø 10 - white	
L=500	22023316-00
L=1000	22023317-00
For suspension mounting in combination with acc. 22025611-00 or with acc. 22023032-00.	

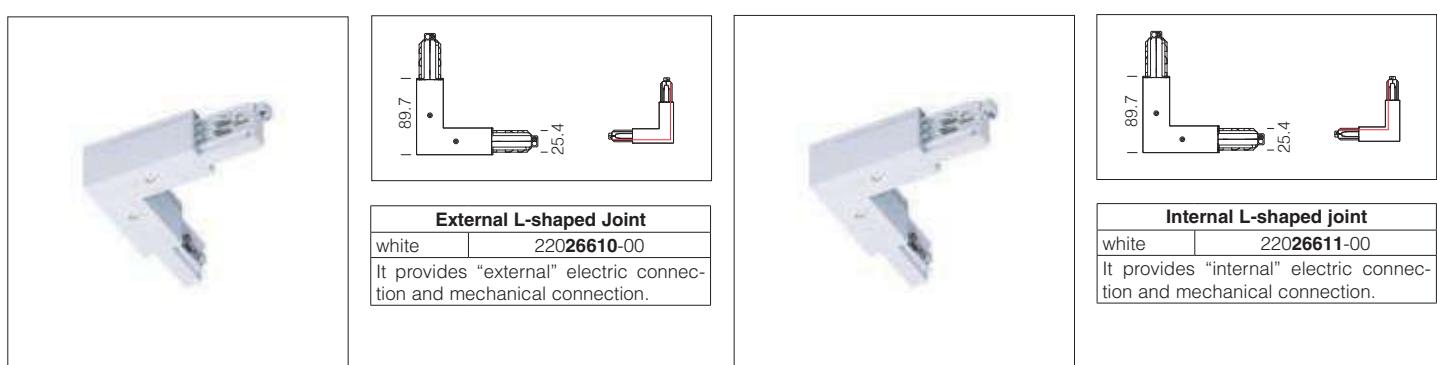

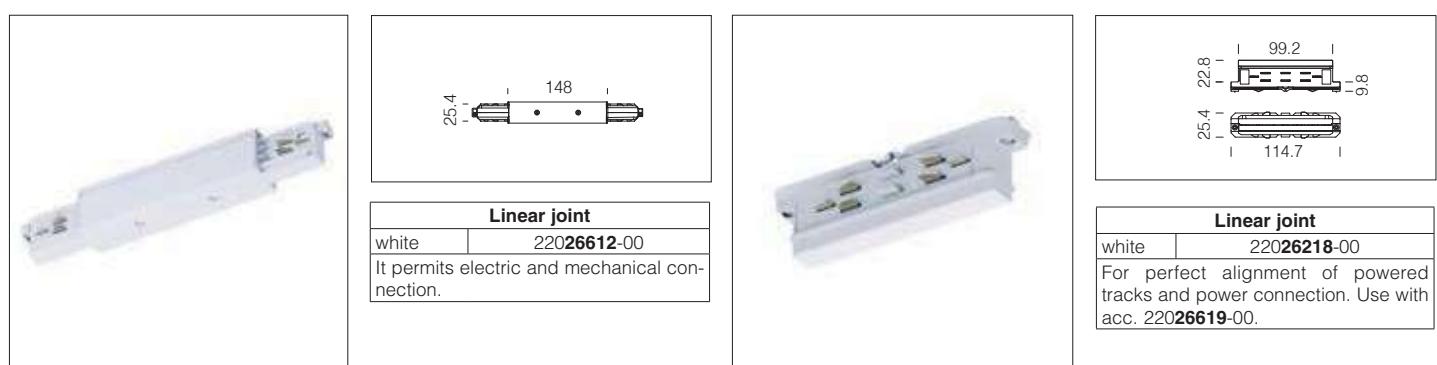

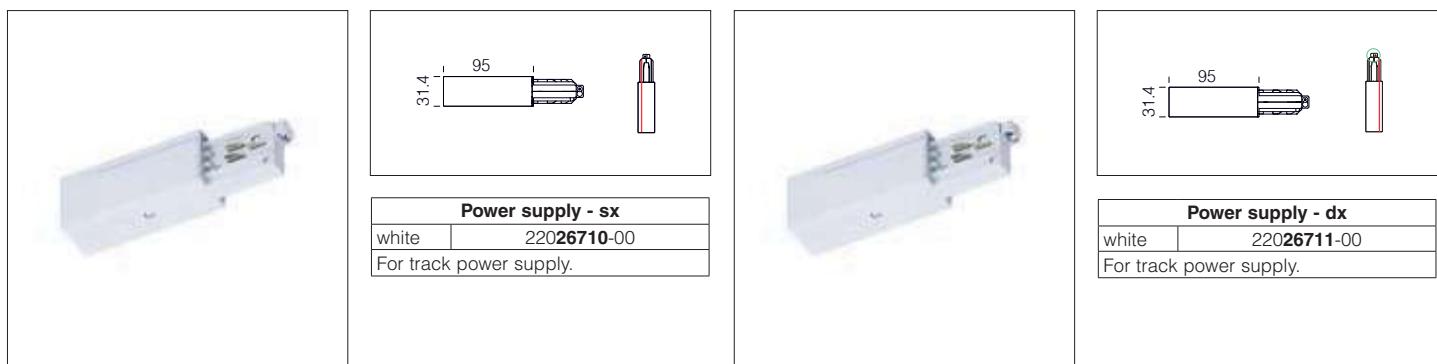

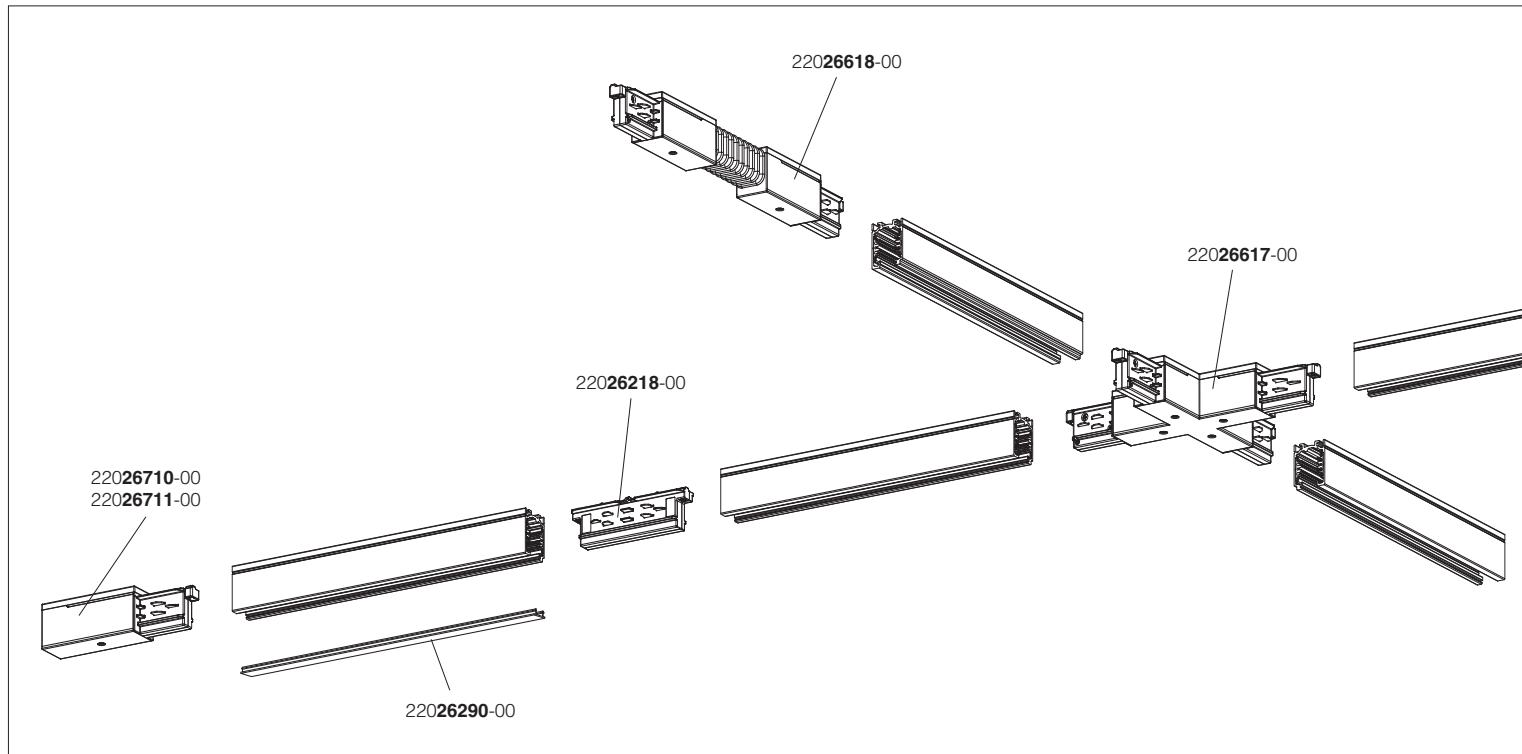

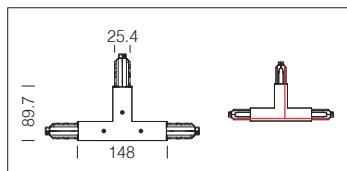

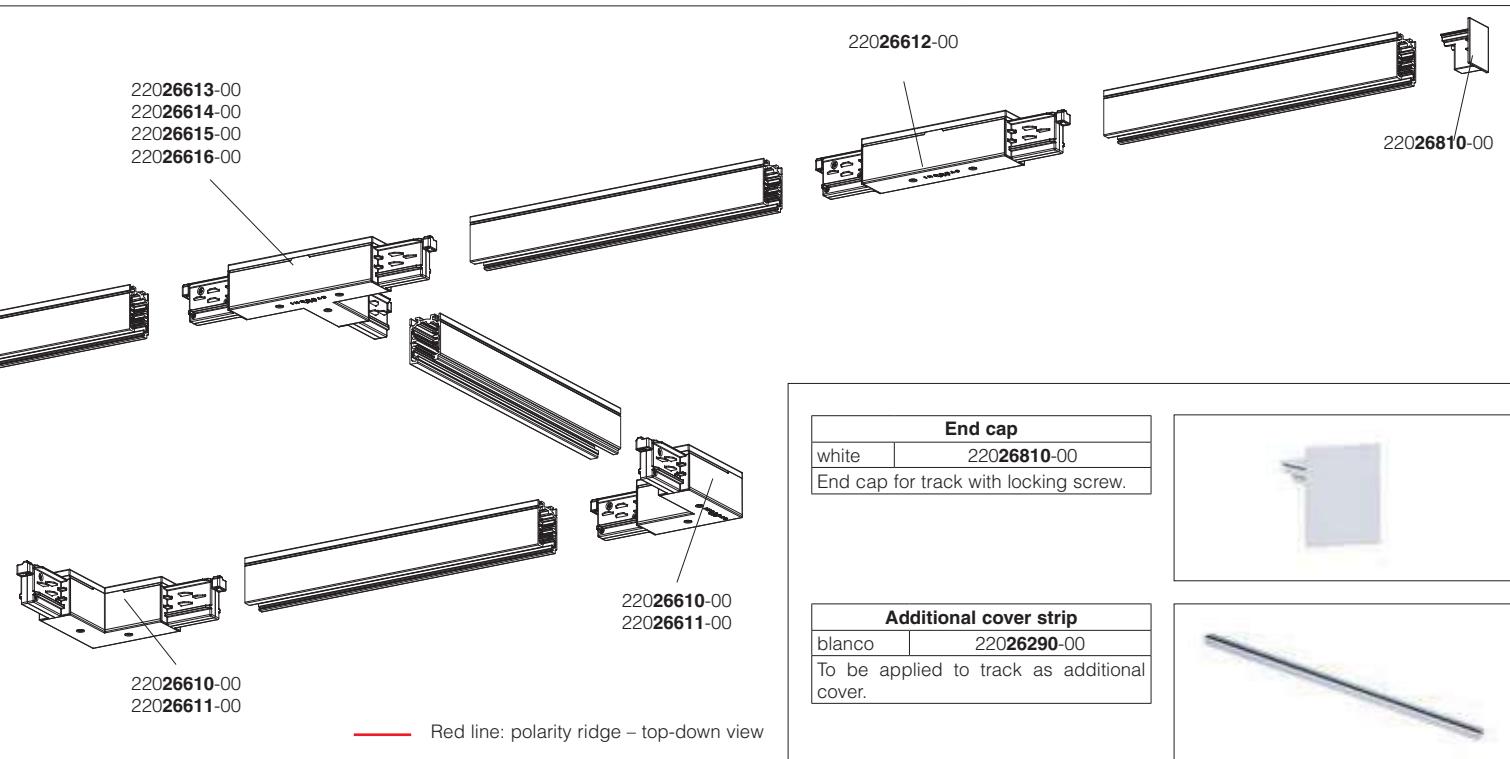

Suspension wire	
steel	22005226-00
100 mt. wire	

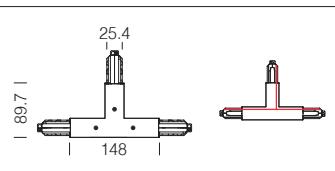

Connection base	
white	on request
Electrical connection base for 7 cables	

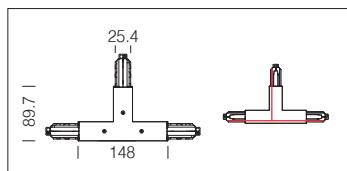

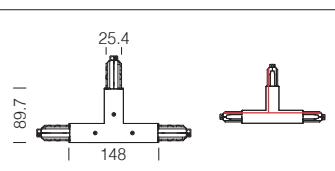

T-shaped, right sided joint
white 22026613-00
It provides "right-sided" electric connection and mechanical connection for the T-shaped joint.

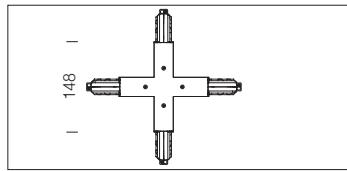

T-shaped, right sided joint
white 22026614-00
It provides "right-sided" electric connection and mechanical connection for the T-shaped joint.

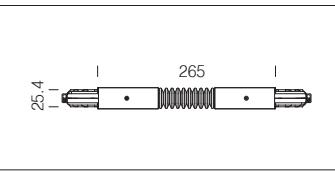

T-shaped, left sided joint
white 22026616-00
It provides "left-sided" electric connection and mechanical connection for the T-shaped joint.

T-shaped, left sided joint
white 22026615-00
It provides "left-sided" electric connection and mechanical connection for the T-shaped joint.

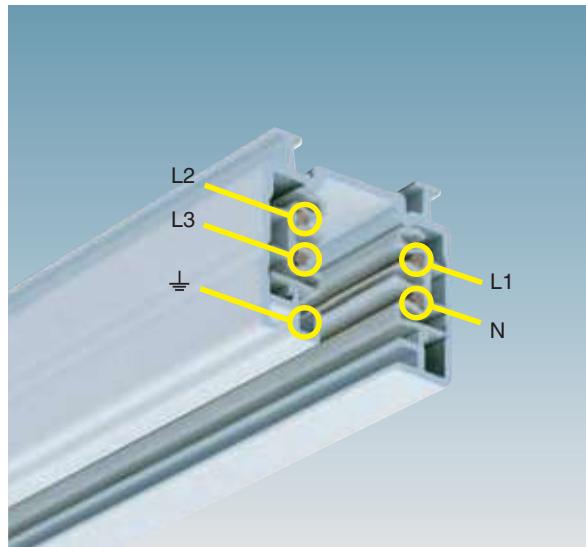

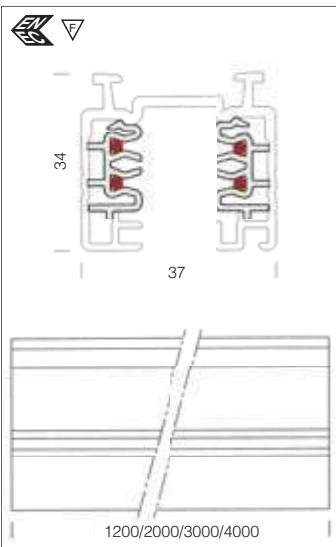

Cross joint
white 22026617-00
It provides "cross-shaped" electric connection and mechanical connection.

Flexible joint
white 22026618-00
It provides electric connection and mechanical connection.

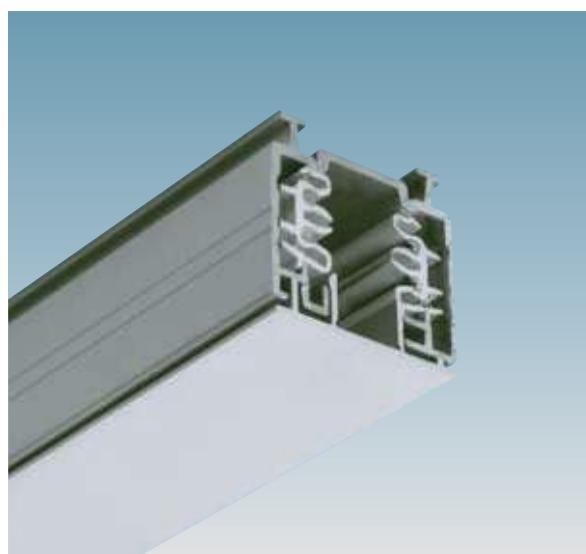

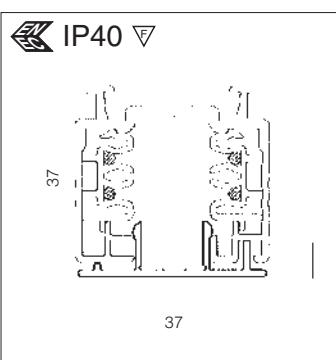

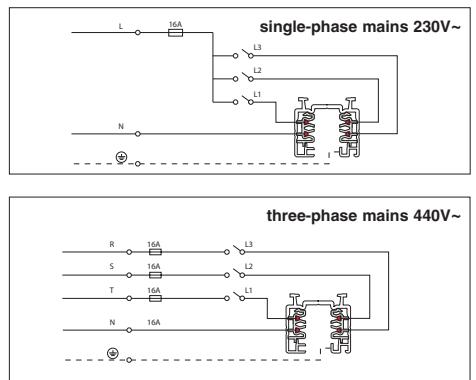

Housing: Three-phase track for 3 separate electrical circuits. Extruded aluminium rectangular section, containing an insulating PVC profile with 4 copper leads, while the profile itself provides the system's grounding. Maximum load: 16A for each conductor.

Supplied with one end cap. Along the top of the track are slots to be used for fastening or recesses for insertion of accessories. Omnitrack is designed to accommodate most adapters available on the market. On request, Omnitrack can be easily cut to the desired lengths.

Powered suspension with wire - 3 p.	
silver	22003174-00
white	22003190-00
Supplied with steel wire (L = 100cm) and millimetre adjustment device and power cord. Max loading: 20Kg.	

Powered suspension with rods	
silver	22003175-00
white	22003116-00
Complete with power cord and rods. Max loading: 30Kg. Length: 50cm - ø10 mm.	

Suspension with wire	
silver	22003176-00
white	22003118-00
Complete with steel wire (L = 100cm) and millimetre adjustment device. Max load: 20 kg.	

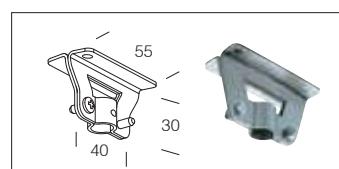

Sospensione semplice con tiges	
silver	22003177-00
white	22003117-00
Completa di tiges. Carico max.: 30Kg. Lunghezza 50cm - ø10 mm.	

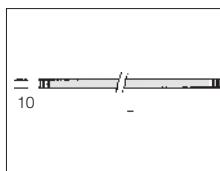

The track is equipped with a slot for direct ceiling installation without accessories, or for suspension installation.

The slot enables:

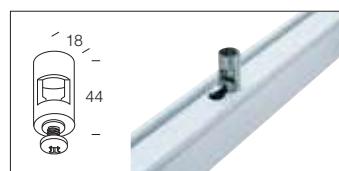

- suspension with Ø 13 rod
- steel wire suspension
- direct ceiling installation by means of fisher screws.

Suspension attachment	
steel	22025611-00
For suspension installation using a Ø10 rod, steel wire acc. 22003106/86-00 or 22003187/07-00. Optionally, it can be made to slide along the track's axis. Max load: 20 kg. with steel wire and 30 kgs with rods.	

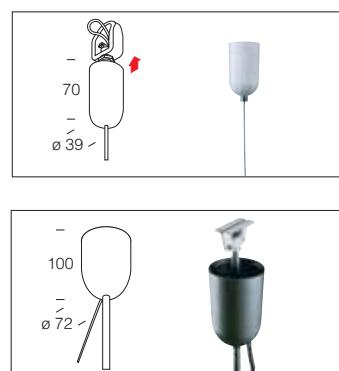

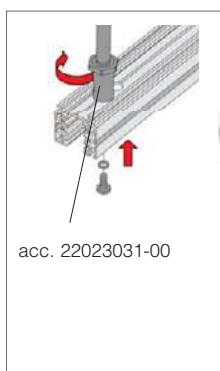

Rods Ø 10	
black	22023336-00
	22023337-00
For suspension mounting in combination with acc. 22025611-00 or with acc. 22023032-00.	

Suspension attachment rods ø 13	
steel	22023031-00
To be used with rods Ø13. Max load 20 kg every 35 cm.	

Suspension attachment

	22023032-00
With millimetre adjustment device to be used with acc. 22003106/86/07/87/66-00.	

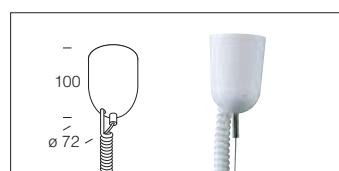

Ceiling suspension

steel	22025610-00
Device to fasten track to the ceiling or wall, also helps slide the track along its axis. Max load: 20 kg. every 35 cm.	

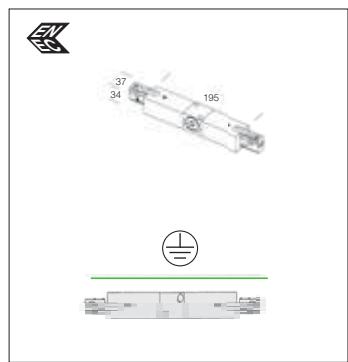

Suspension attachment	
nickel-plated	22003166-00
Suspension system supplied with steel wire(l=1.75m) with a millimetre adjustable device.Max load:20 kg.	

Made of polycarbonate.

Preassembled component, ready to use. It permits electric and mechanical connection. Includes three end plugs and power cable.

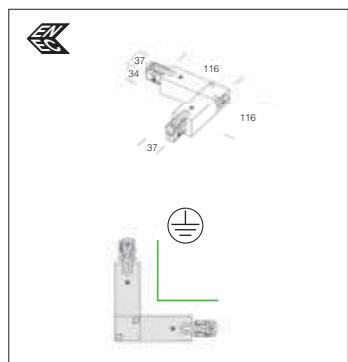

Linear joint		
colour	weight	code
white		22025104-00
grey	0.20	22025111-00
black		22025132-00

Made of polycarbonate.

Preassembled, ready to use component. It provides "internal" electric connection and mechanical connection for the L-shaped joint. Supplied with three end plugs and power cable.

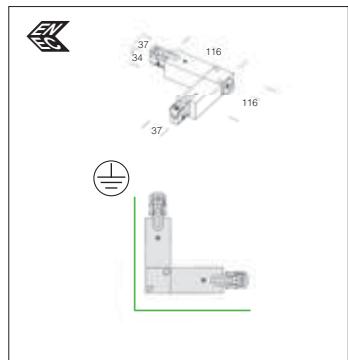

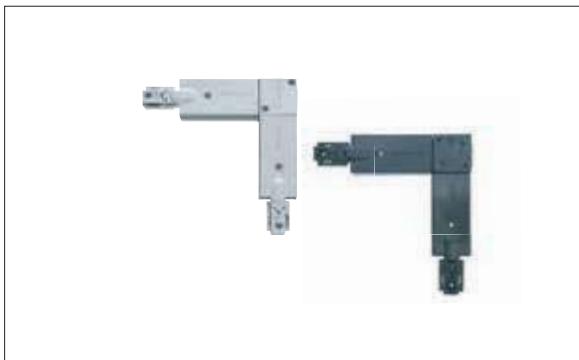

Internal L-shaped joint		
colour	weight	code
white		22025106-00
grey	0.20	22025113-00
black		22025134-00

Made of polycarbonate.

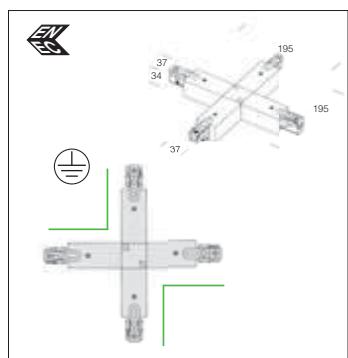

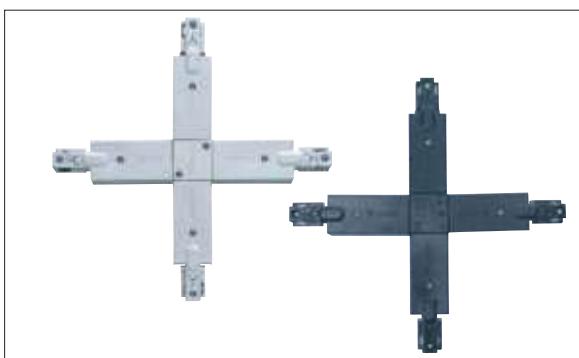

Preassembled component, ready to use. It permits "external" electric connection and mechanical connection for the L-shaped joint. Includes three end plugs and power cable.

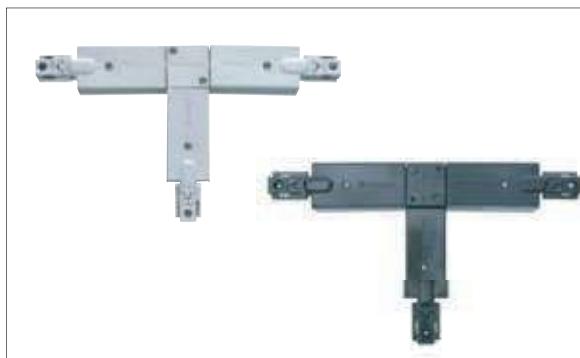

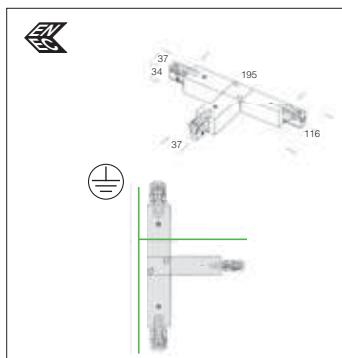

External L-shaped Joint		
colour	weight	code
white		22025105-00
grey	0.20	22025112-00
black		22025133-00

Made of polycarbonate. Preassembled, ready to use component. It provides "cross-shaped" electric connection and mechanical connection. Supplied with one end plug and power cable.

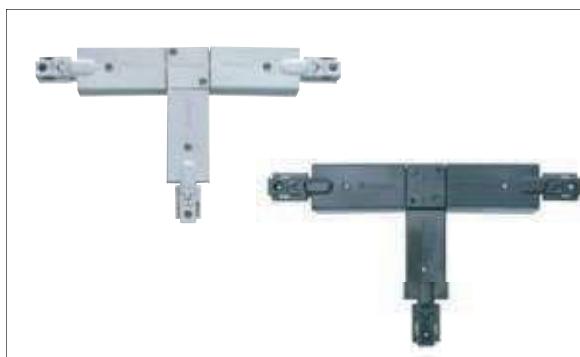

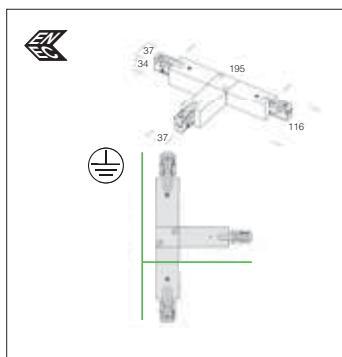

Cross joint		
colour	weight	code
white		22025109-00
grey	0.40	22025116-00
black		22025137-00

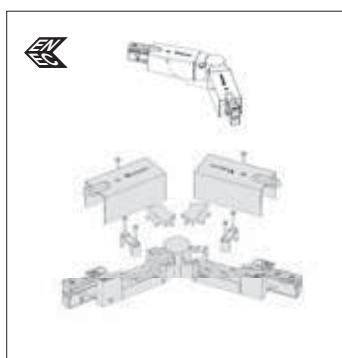

Made of polycarbonate.
Preassembled, ready to use component. It provides "left-sided" electric connection and mechanical connection for the T-shaped joint. Supplied with 2 end plugs and power cable.

T-shaped, left sided joint		
colour	weight	code
white		22025108-00
grey	0.30	22025115-00
black		22025136-00

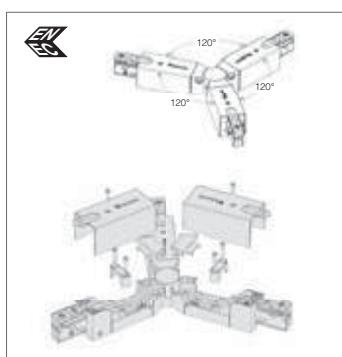

Preassembled component, ready to use. It permits "right-sided" electric connection and mechanical connection for the T-shaped joint. Includes 2 end plugs and power cable.

T-shaped, right-sided Joint		
colour	weight	code
white		22025107-00
grey	0.30	22025114-00
black		22025135-00

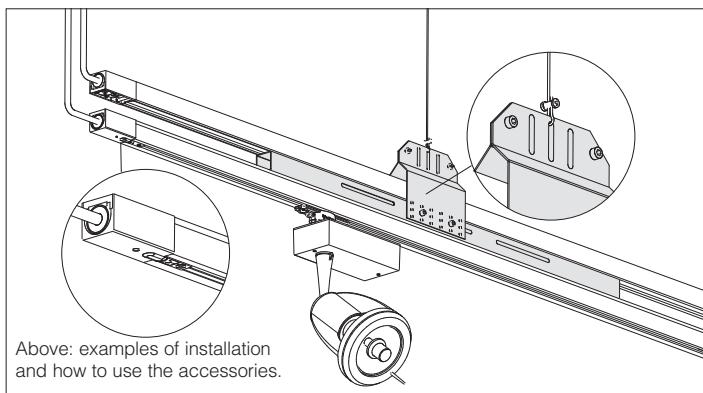

Enables power connection and junction with variable angles.

Circular 2-way Joint		
colour	weight	code
white		22025117-00
grey	0.20	22025171-00
black		22025138-00

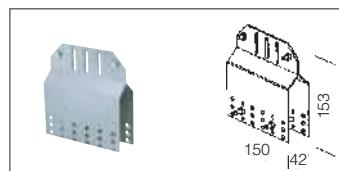

Enables power connection and junction with 120° fixed angles.

Circular 3-way Joint		
colour	weight	code
white		22025118-00
grey	0.30	22025173-00
black		22025139-00

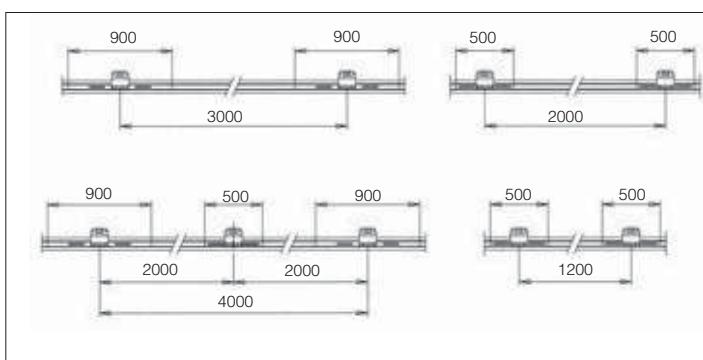

This structure is obtained by using the appropriate accessories with the OMNITRACK track. The 2-way track's main feature is the possibility to use it as an electrified track for accent light floodlights (lower side), and as a load-bearing system to support a ceiling fixture for general lighting.

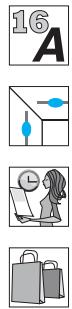

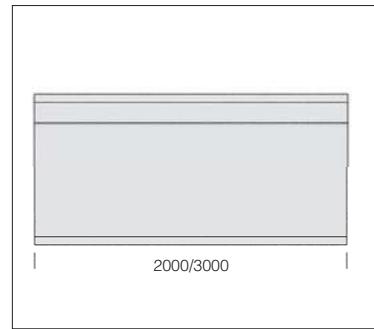

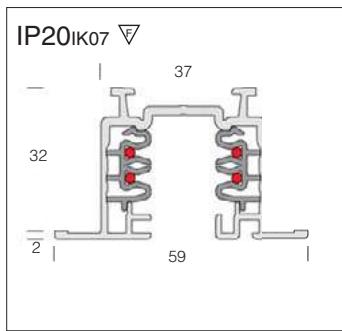

Bracket suspension	
steel	22024870-00
For suspension and installation of two Omnitrack tracks.	

Track bracket		
steel	L=500	22024875-00
	L=900	22024879-00
Made in steel. To join two Omnitracks and to attach bracket acc. 22024870-00.		

Power supply	
white	22025102-00
grey	22025110-00
black	22025131-00
dark grey	22025174-00
Provides power to the track.	

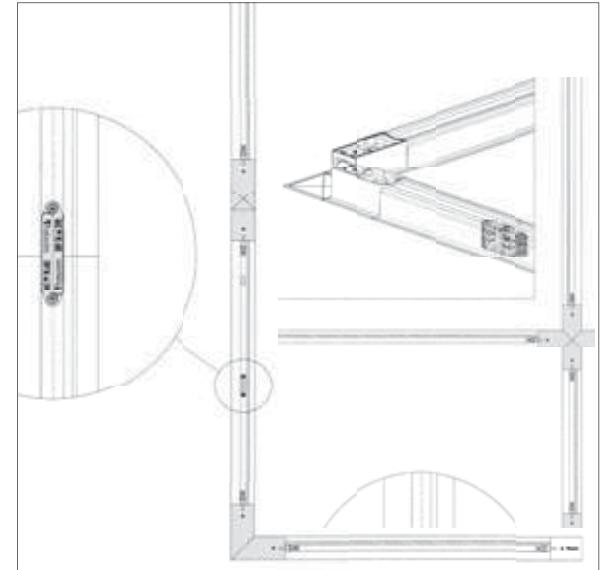

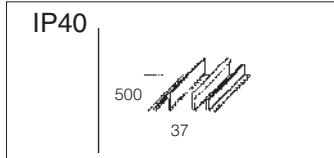

Recessed Omnitrack S

A family of fixtures designed to combine high energy saving with excellent light quality, to address diverse needs concerning both safety and maintenance. The fixture's design is extremely clean and functional. Manufactured in accordance with standards EN12464 for VDT.

Housing: in V2 shatterproof, self-extinguishing polycarbonate, coated with high-performance aluminium powder and equipped with anti-reflection and anti-glare optics. Perimeter border on the false ceiling has white or aluminium coloured photogravure finishing. Support bracket in galvanised steel with housings for fastening springs made in galvanised steel wire for false ceiling mounting. Shielding at 65°.

Dark light reflector: V2 self-extinguishing polycarbonate; metalized aluminium powder coated through a C.V.D. hard-vacuum process for greater light control and efficiency.

Equipment: includes stainless steel springs ensuring perfect adherence to 1 to 20 mm. thick false ceilings.

Regulations: manufactured in accordance with standards EN60598 – CEI 34 –21. Degree of protection in accordance with standards EN60529.

LED: high-efficiency light sources (**CRI 92**).

Luminous flux maintenance 80%: **50.000 h (L80B20)**.

Power factor >0.9.

Photobiological safety class: exempt group.

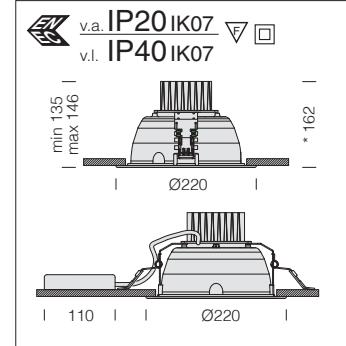

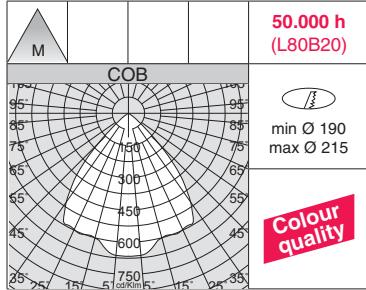

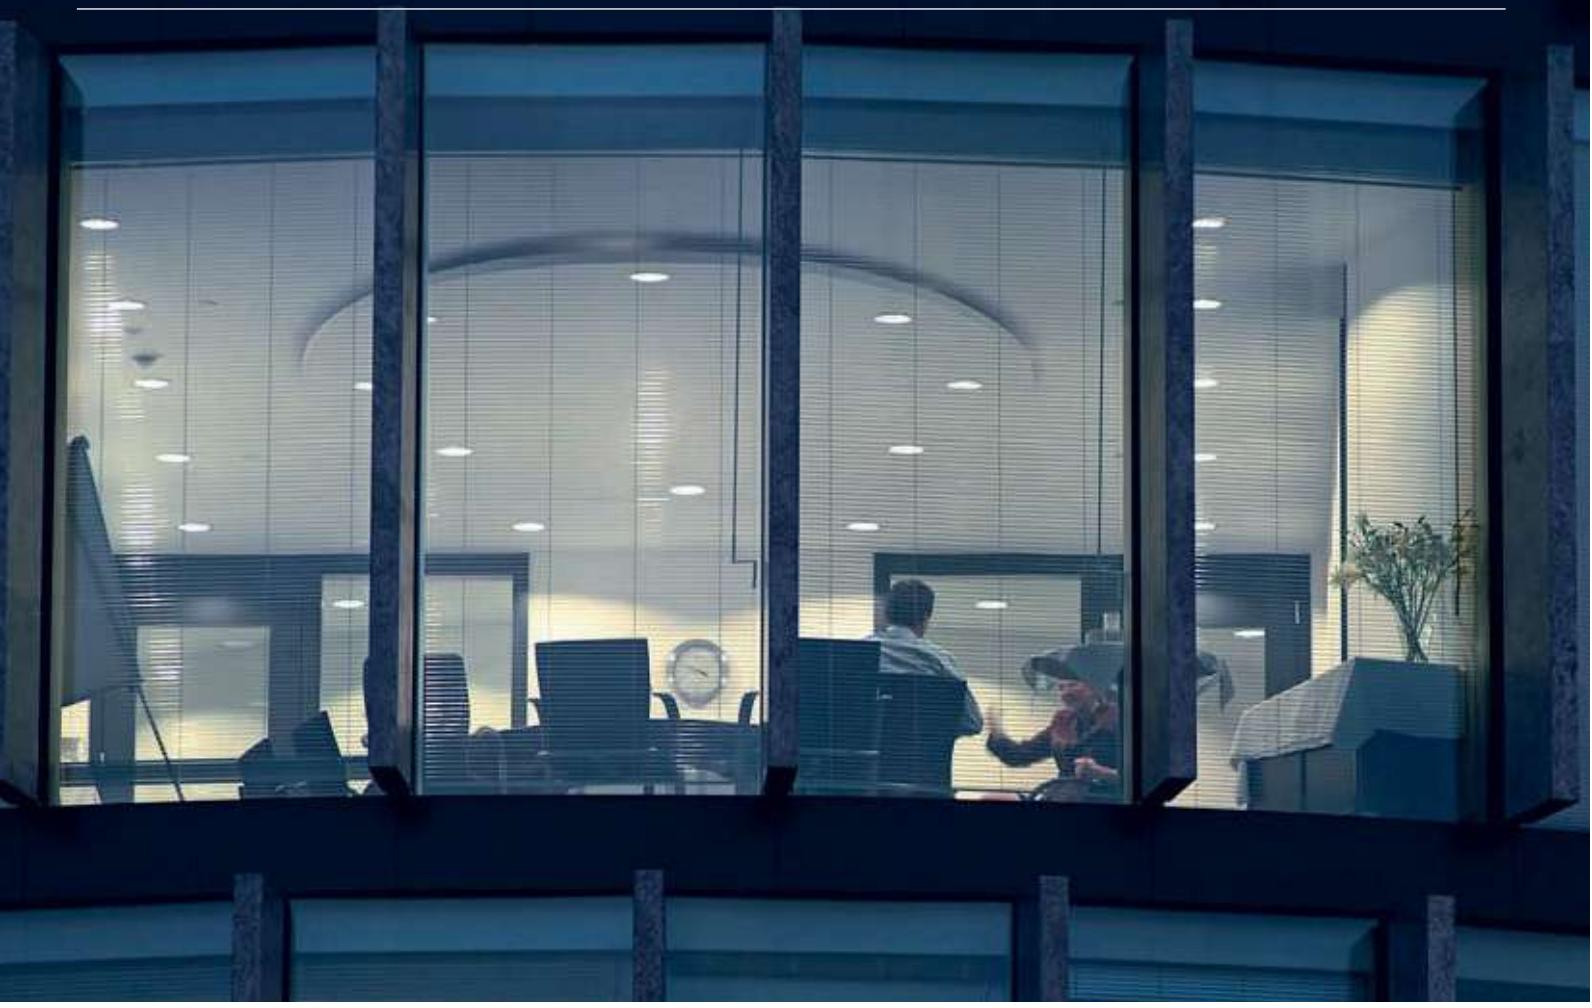

The right lighting and fixture play a vital role in facilitating sales. This is the reason why LED fixtures with a **CRI>90** are being requested. Therefore, the current trend is geared towards the manufacturing of more flexible fixtures, which also emit an excellent quality of light, while guaranteeing remarkable energy savings and lower maintenance costs.

The Colour Rendering Index (**CRI**) indicates how truthfully the artificial light source is able to reproduce the colours of objects. It varies from a range of **0 to 100**, where **0 represents the minimum** and **100 is the maximum**. Daylight is the best source of light from a physiological point of view because it contains the full colour spectrum. Therefore, a lamp with a high colour rendering index is very important to ensure the wellbeing and comfort of the occupants of a room and it is absolutely necessary in rooms where good visibility is required.

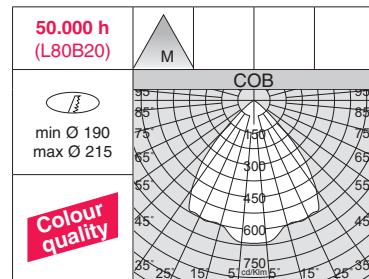

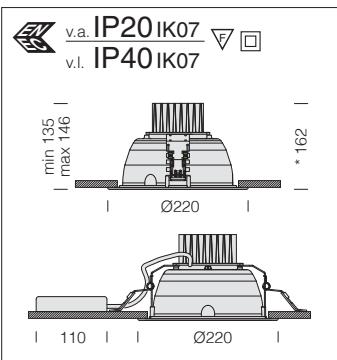

Classification of UGR values by applications	
≤ 16	Very demanding applications (technical drawings)
≤ 19	Offices and schools (reading, writing, business meetings, computer work)
≤ 22	Industrial applications, craftsmen
> 28	High glare

The **UGR** (unified glare rating) is an international unified measure developed by the CIE (Commission Internationale de l'Eclairage) to assess the direct glare generated by a lighting system. The European standard regulating the lighting of indoor work places (**UNI-EN 12464-1**) recommends a specific UGR value for different applications ranging between **10 and 30**; **the lower the UGR value, the lower the glare**. The exact value of this index differs by project type because it depends on the position of the luminaires, room characteristics (dimensions, reflections) and on the point of observation of viewers.

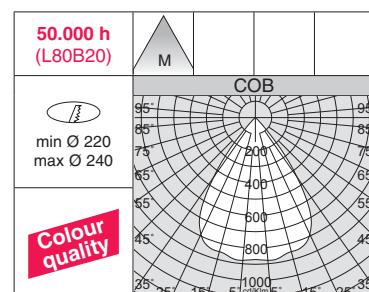

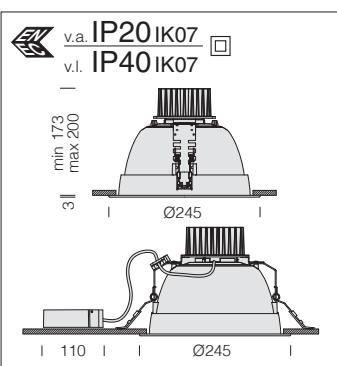

different applications ranging between **10 and 30**; **the lower the UGR value, the lower the glare**. The exact value of this index differs by project type because it depends on the position of the luminaires, room characteristics (dimensions, reflections) and on the point of observation of viewers.

A range of recessed spotlights with a round and square shape, incorporating latest generation LED modules. This line of products was created to meet the needs of lighting systems used for the decoration of interior spaces that are becoming more demanding every day. Lighting systems are required to be energy-efficient and flexible in order to define spaces according to different needs, offer striking visual impact, ensure low management costs, and guarantee long service life.

Housing: in die cast aluminium.

Optics: eggcrate screen complete with tempered glass.

Reflector: metallized aluminium.

Installation: is equipped with galvanised steel support brackets, with housing for springs for attachment to the false ceilings.

Coating: using polyester epoxy paint to withstand UV rays.

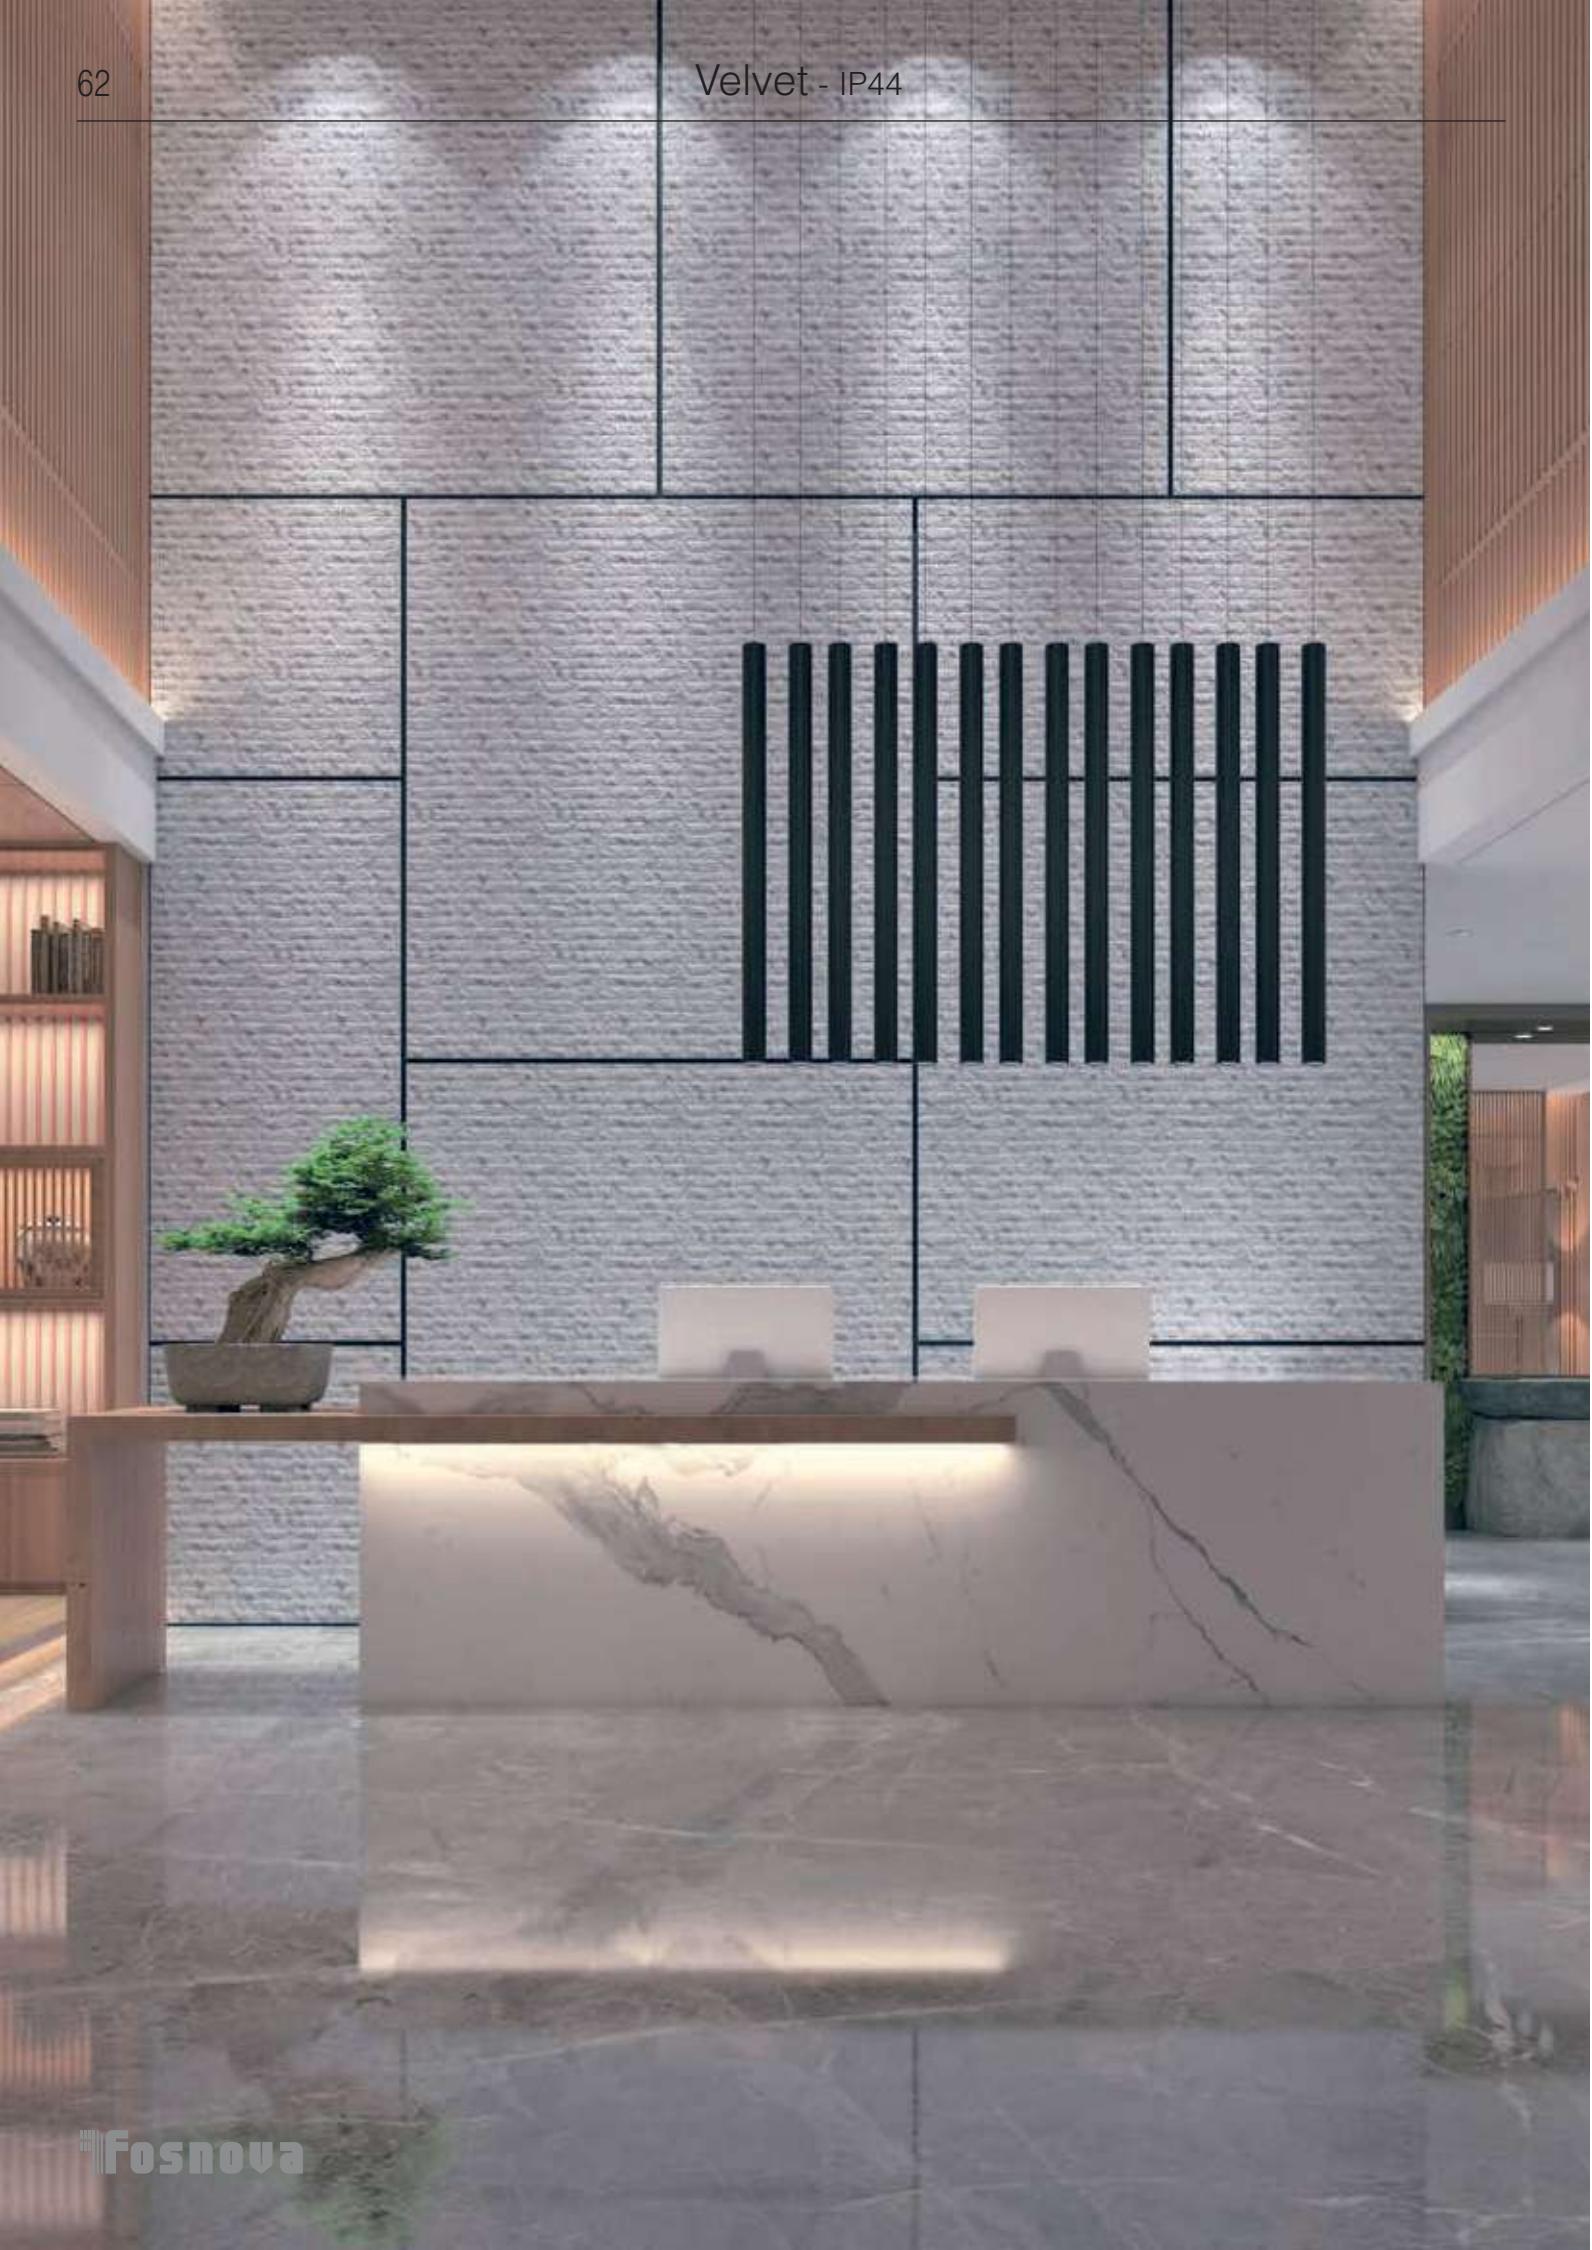

Standard supply: includes adjustable steel bracket.

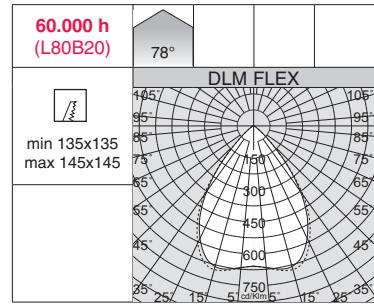

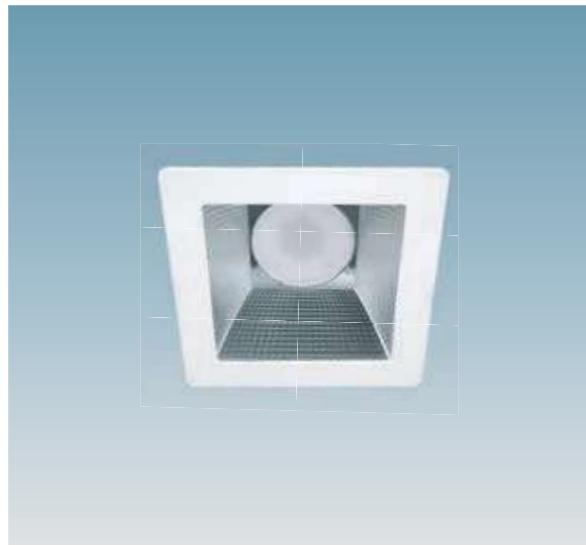

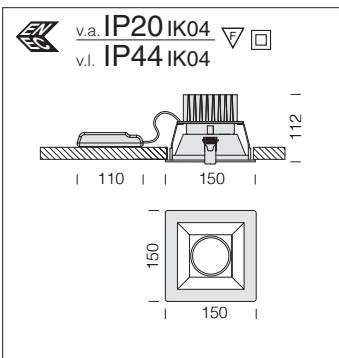

LED: luminous flux maintenance 80%: **60.000 h (L80B20)**.

Power factor >0.9.

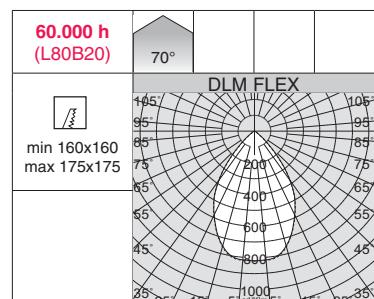

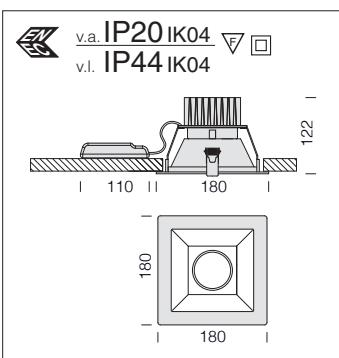

Photobiological safety class: exempt group.

On Request: HCL Version.

Housing: in die cast aluminium.

Diffuser: the shield consists of a laser-cut slab that serves as a lens for its effect of concentric circles. These decorations create a pattern, with variable distances; the closer they get to the centre, the closer they come together achieving excellent visual comfort without glare.

Painting: dust painted, using polyester epoxy paint to withstand UV rays.

Standard supply: includes adjustable steel bracket.

Regulations: manufactured in accordance with standards EN60598 – CEI 34 –21. Degree of protection in accordance with standards EN60529.

LED: high-efficiency light sources (**CRI 95**).

Luminous flux maintenance 80%: **50.000 h (L80B20)**.

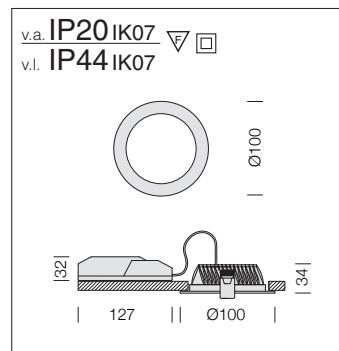

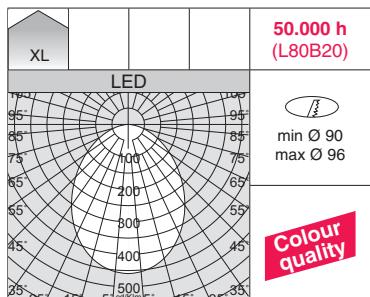

Power factor >0.9.

Photobiological safety class: exempt group.

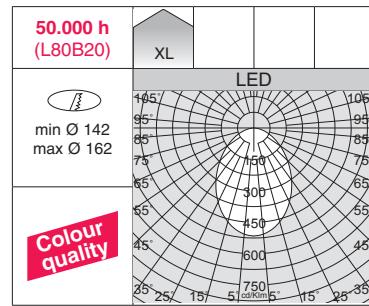

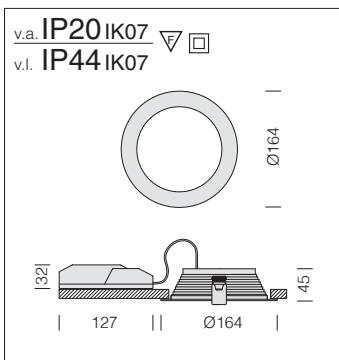

The right lighting and fixture play a vital role in facilitating sales. This is the reason why LED fixtures with a **CRI>90** are being requested. Therefore, the current trend is geared towards the manufacturing of more flexible fixtures, which also emit an excellent quality of light, while guaranteeing remarkable energy savings and lower maintenance costs.

The Colour Rendering Index (**CRI**) indicates how truthfully the artificial light source is able to reproduce the colours of objects. It varies from a range of **0 to 100**, where **0 represents the minimum** and **100 is the maximum**. Daylight is the best source of light from a physiological point of view because it contains the full colour spectrum. Therefore, a lamp with a high colour rendering index is very important to ensure the wellbeing and comfort of the occupants of a room and it is absolutely necessary in rooms where good visibility is required.

Fosnova offers a wide range of recessed spotlights to meet the increasingly demanding lighting needs of shopping malls, stores and museums. This vast selection of fixtures includes the new recessed spotlight called Studio, with its soft and comfortable light and high degree of protection (IP44) capable of creating pleasant settings for relaxation and shopping. Its extraordinary visual comfort combines with an excellent colour rendering (CRI92).

Housing: in die cast aluminium with clear PMMA diffuser.

Reflector UGR<19: oxidised and polished aluminium.

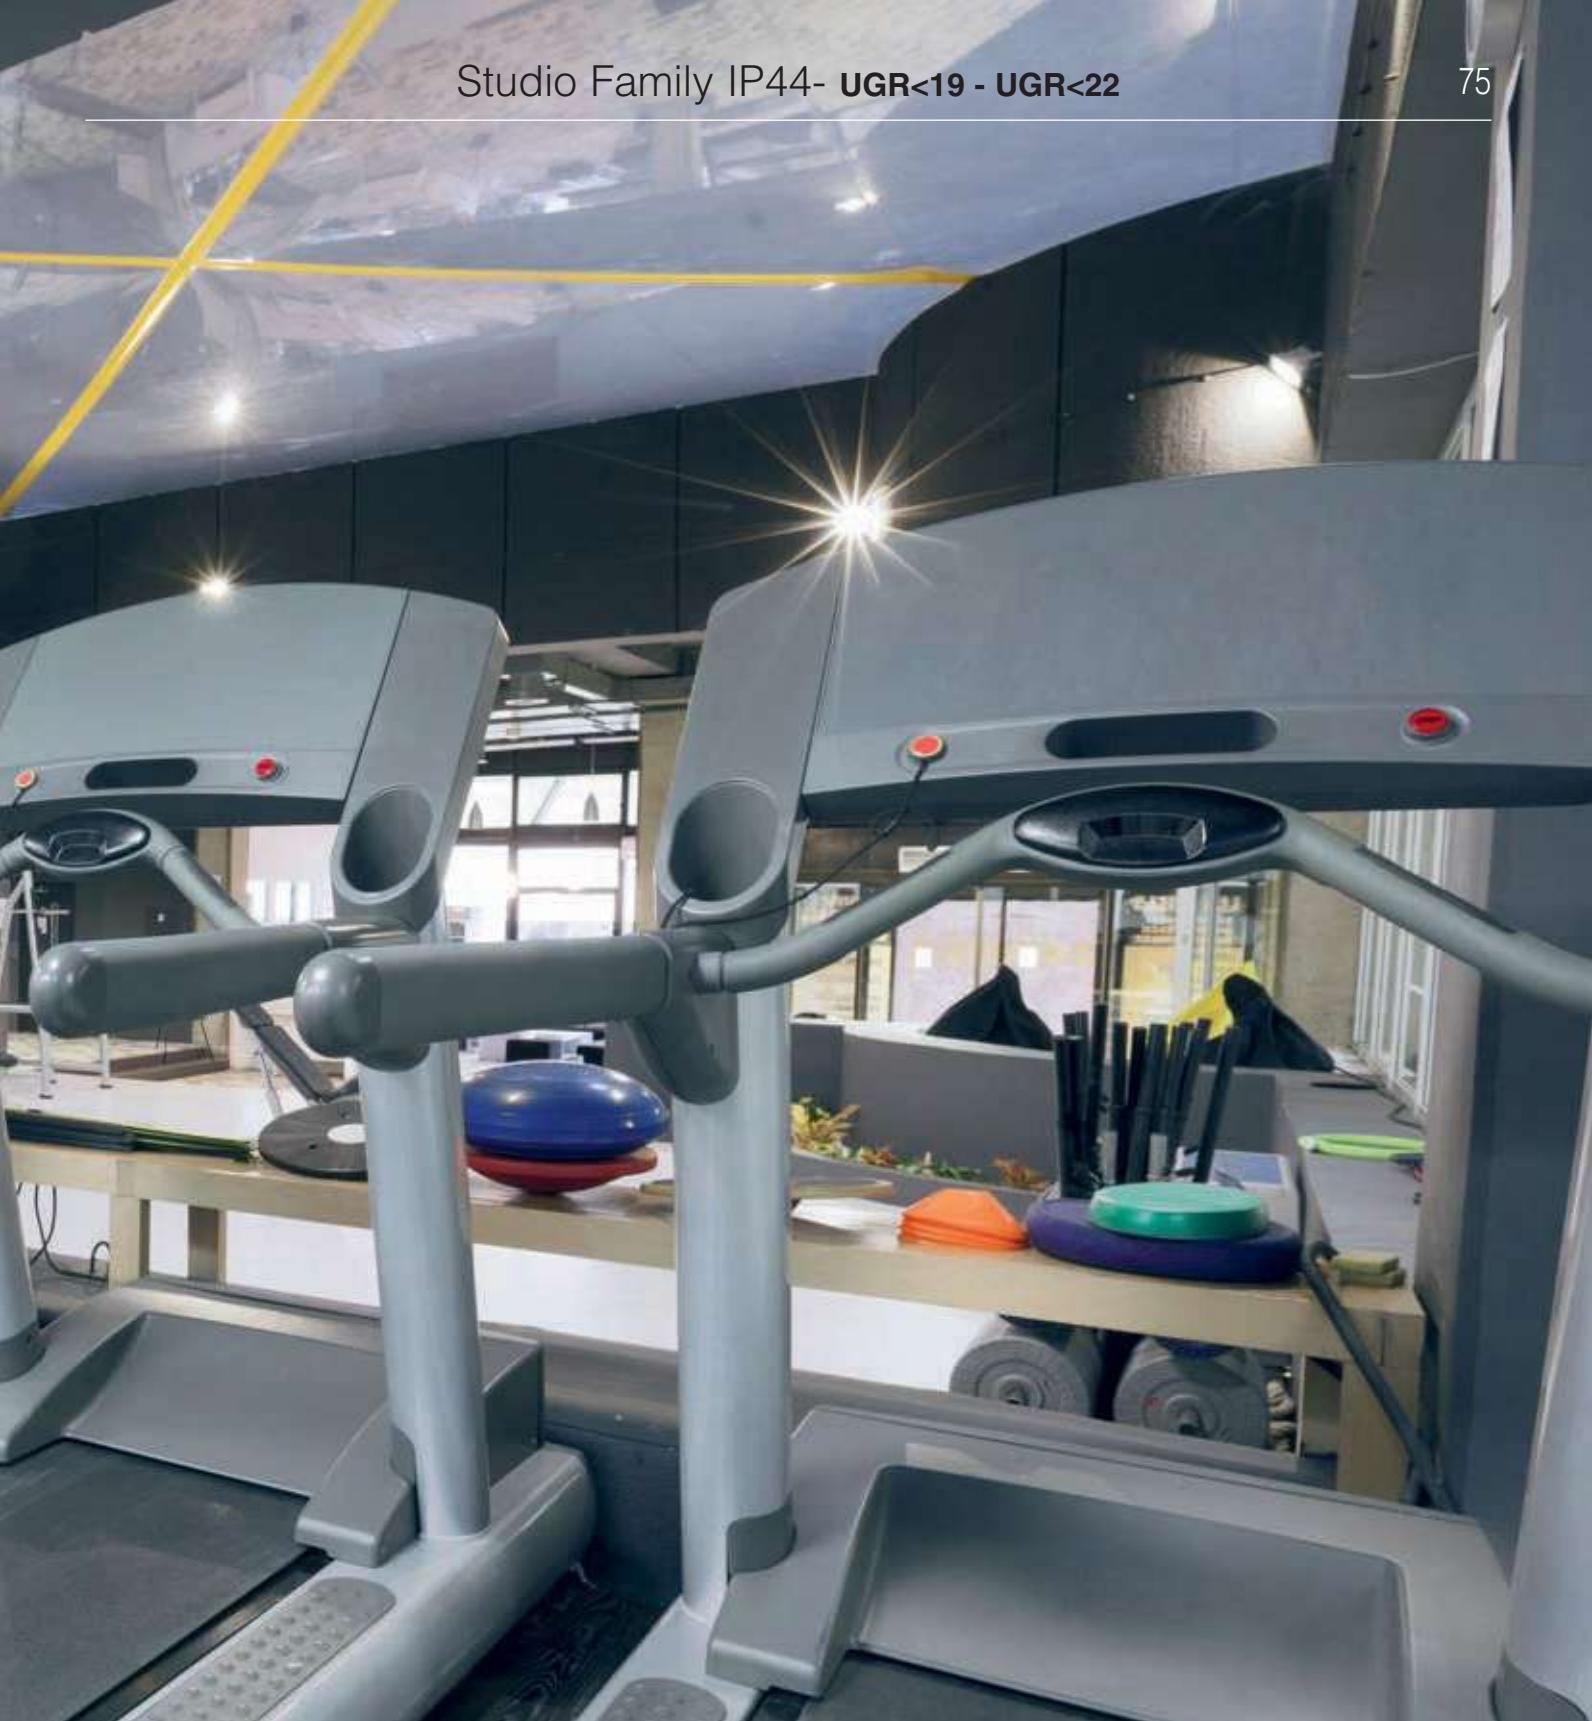

Reflector UGR<22: optics in high gloss, anti-glare aluminium to optimise light efficiency.

Lens UGR<22: in PMMA with high efficiency output and very low glare rate.

LED: Luminous flux maintenance 80%: 50.000h (L80B20).

Power factor >0.9.

Photobiological safety class: exempt group.

The right lighting and fixture play a vital role in facilitating sales. This is the reason why LED fixtures with a **CRI>90** are being requested. Therefore, the current trend is geared towards the manufacturing of more flexible fixtures, which also emit an excellent quality of light, while guaranteeing remarkable energy savings and lower maintenance costs.

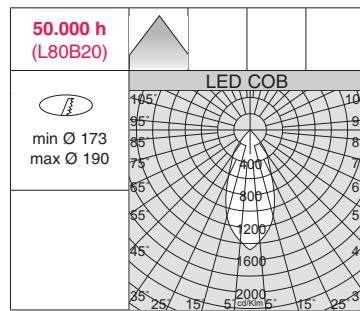

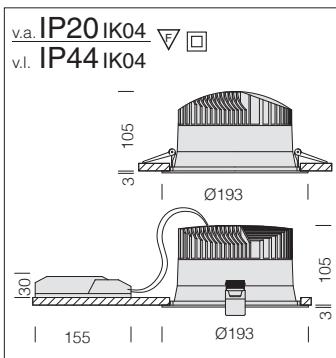

The Colour Rendering Index (**CRI**) indicates how truthfully the artificial light source is able to reproduce the colours of objects. It varies from a range of **0 to 100**, where **0 represents the minimum** and **100 is the maximum**. Daylight is the best source of light from a physiological point of view because it contains the full colour spectrum. Therefore, a lamp with a high colour rendering index is very important to ensure the wellbeing and comfort of the occupants of a room and it is absolutely necessary in rooms where good visibility is required.

Classification of UGR values by applications		UGR
≤ 16	Very demanding applications (technical drawings)	
≤ 19	Offices and schools (reading, writing, business meetings, computer work)	
≤ 22	Industrial applications, craftsmen	
> 28	High glare	

The **UGR** (unified glare rating) is an international unified measure developed by the CIE (Commission Internationale de l'Eclairage) to assess the direct glare generated by a lighting system. The European standard regulating the lighting of indoor work places (**UNI-EN 12464-1**) recommends a specific UGR value for different applications ranging between **10 and 30**; the lower the UGR value, the lower the glare. The exact value of this index differs by project type because it depends on the position of the luminaires, room characteristics (dimensions, reflections) and on the point of observation of viewers.

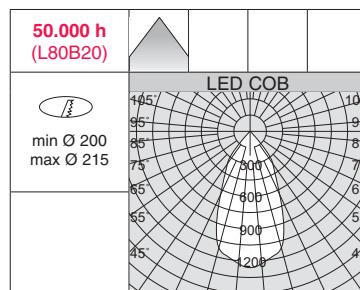

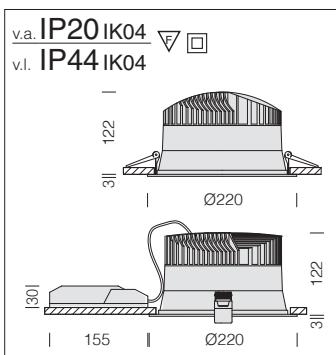

30; the lower the UGR value, the lower the glare. The exact value of this index differs by project type because it depends on the position of the luminaires, room characteristics (dimensions, reflections) and on the point of observation of viewers.

≤ 22	Industrial applications, craftsmen	
> 28	High glare	

The **UGR** (unified glare rating) is an international unified measure developed by the CIE (Commission International de l'Eclairage) to assess the direct glare generated by a lighting system. The European standard regulating the lighting of indoor work places (**UNI-EN 12464-1**) recommends a specific UGR value for different applications ranging between **10 and 30**; the lower the UGR value, the lower the glare. The exact value of this index differs by project type because it depends on the position of the luminaires, room characteristics (dimensions, reflections) and on the point of observation of viewers.

lue for different applications ranging between **10 and 30**; the lower the UGR value, the lower the glare. The exact value of this index differs by project type because it depends on the position of the luminaires, room characteristics (dimensions, reflections) and on the point of observation of viewers.

The range of Luthor recessed spotlights is expanded with three sizes. This enables to fit the spotlights in all fitting holes of the same line of products. Luthor adjustable recessed LED spotlights offer technologically advanced light and are a very solid product with high quality and high performance to illuminate large commercial spaces.

Housing: adjustable angle, made of die-cast aluminium.

Reflector: high-efficiency prismatic and polished aluminium.

Coating: dust painted, using polyester epoxy paint to withstand UV rays.

LED: high-efficiency light sources (**CRI 93**).

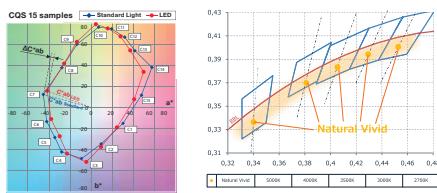

Luminous flux maintenance 80%: **50.000 h (L80B20)**.

Power factor >0.95.

Photobiological safety class: exempt group.

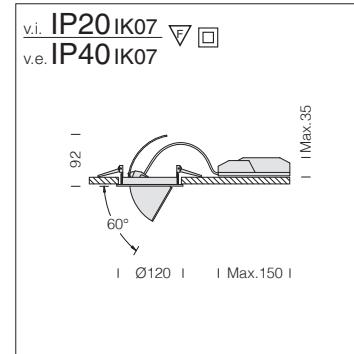

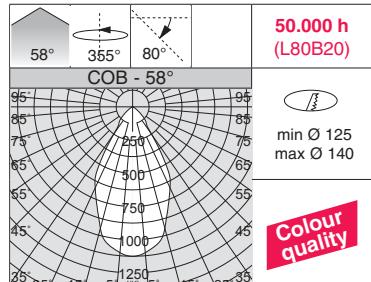

15 colours in the Colour Quality Scale (CQS) measured by the CIELAB allow the measurement of the saturation of colours against a standard lighting source.

$\Delta E^*_{ab} = C^*_{ab} \text{LED} - C^*_{ab} \text{standard light source}$
each value is measured in 15 points.
 $\Delta E^*_{ab} > 0$ = high colour saturation
 $\Delta E^*_{ab} < 0$ = low colour saturation

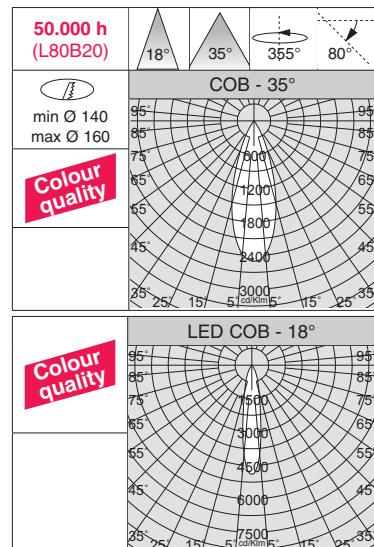

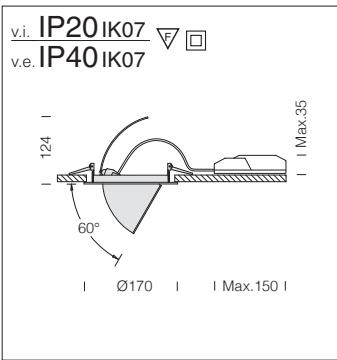

In different commercial sectors, lighting systems should meet specific requirements, such as for example, emphasise the colour of food or create the right setting for displaying garments, household articles as well as the most exclusive items.

VERSION	CATEGORY	CHARACTERISTICS
2700K - CRI>95	Bread, bakery, cheese and dairy products	Warm golden light enhances the feeling of freshly made bread and makes cheese and dairy products look more inviting.
3000K - CRI>95	Meat and meat products, fresh fruit and vegetable, clothing, household items and appliances	White warm light enhances the reds of meats and makes fruit and vegetables look fresher, displaying more saturated colours, enhancing the appearance and the characteristics of the wares on display.
4000K - CRI>95	Fish and shellfish, jewellery, showrooms	Cold white light makes whites look cleaner and brighter, eliminating the yellowing effect of conventional LED lamps and enhancing the human eye's perception of "pure white".

Whether in the round or square version, this recessed LED spotlight is the perfect solution for installations that are designed to hide their physical presence once fitted.

These spotlights are shaped to blend perfectly into the false ceilings where they are fitted.

Housing: fixed downlight in die cast aluminium complete with spring clips for recessed mounting

Reflector: dark light optics in high gloss, anti-glare aluminium to optimise light efficiency. Version with matt wide beam optics on request.

LED: high Energy Saving.

Luminous flux maintenance 80%: **50.000 h (L80B20)**.

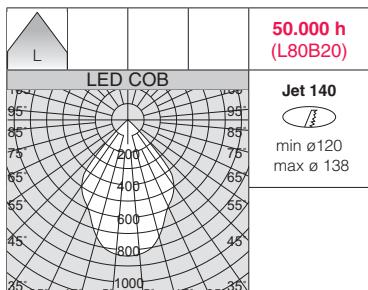

Power factor >0.9.

Photobiological safety class: exempt group.

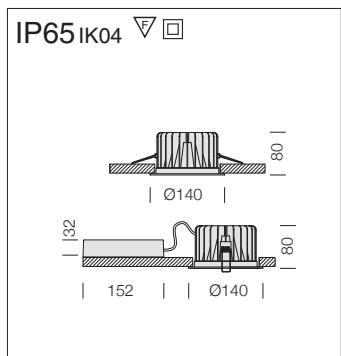

The right lighting and fixture play a vital role in facilitating sales. This is the reason why LED fixtures with a **CRI>90** are being requested. Therefore, the current trend is geared towards the manufacturing of more flexible fixtures, which also emit an excellent quality of light, while guaranteeing remarkable energy savings and lower maintenance costs.

The Colour Rendering Index (**CRI**) indicates how truthfully the artificial light source is able to reproduce the colours of objects. It varies from a range of **0 to 100**, where **0 represents the minimum** and **100 is the maximum**. Daylight is the best source of light from a physiological point of view because it contains the full colour spectrum. Therefore, a lamp with a high colour rendering index is very important to ensure the wellbeing and comfort of the occupants of a room and it is absolutely necessary in rooms where good visibility is required.

The ideal retrofit of existing ISPOT spotlights, it represents the technological benchmark of recessed spotlights. The main advantages of this latest generation product are energy-efficiency, great flexible use and superior lighting quality.

With latest generation LEDs you can save up to 80% of energy compared to old products, plus a service life that can reach up to 50,000 hours guaranteeing an excellent luminous flux. The high quality of these spotlights is also guaranteed by specific colour temperatures (3000K - 4000K) and anti-glare optics.

Housing: made of die-cast aluminium with spring clips for recessed mounting.

Reflector iSpot - iSpot Tech: high-efficiency metallised polycarbonate.

Lens iSpot Architectural: in PMMA with high efficiency output and very low glare rate.

LED: high-efficiency light sources (**CRI 92**).

Luminous flux maintenance 80%: **50.000 h (L80B20)**.

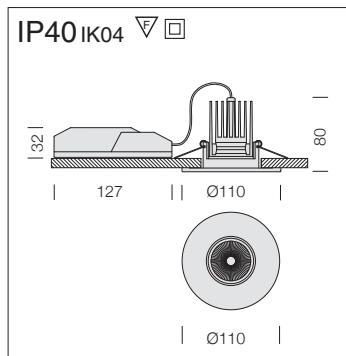

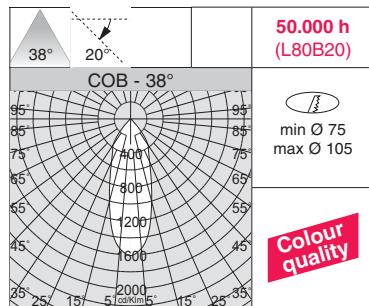

Power factor >0.9.

Photobiological safety class: exempt group.

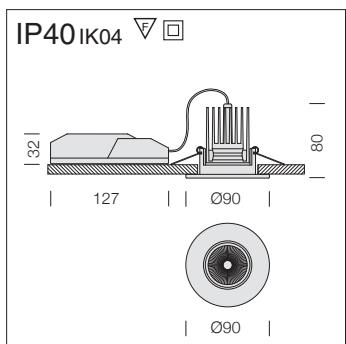

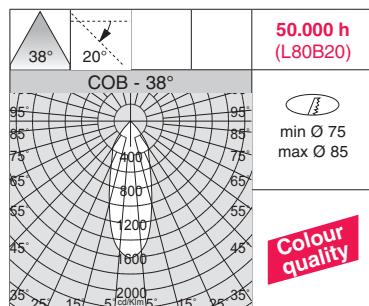

The right lighting and fixture play a vital role in facilitating sales. This is the reason why LED fixtures with a **CRI>90** are being requested. Therefore, the current trend is geared towards the manufacturing of more flexible fixtures, which also emit an excellent quality of light, while guaranteeing remarkable energy savings and lower maintenance costs.

The Colour Rendering Index (**CRI**) indicates how truthfully the artificial light source is able to reproduce the colours of objects. It varies from a range of **0 to 100**, where **0 represents the minimum** and **100 is the maximum**. Daylight is the best source of light from a physiological point of view because it contains the full colour spectrum. -------	-------------

For insulation in the ceiling.

Housing: made of die-cast aluminium complete with spring clips for recessed mounting.

Reflector: high-efficiency metallised polycarbonate.

Equipment: silicone rubber protection gasket compliant with French low-energy building standards (**BBC**).

Standards: manufactured pursuant to EN 60598-1-CEI 34.21 and with a degree of protection pursuant to EN 60529.

LED: high-efficiency light sources (**CRI 92-93**).

Luminous flux maintenance 80%: **50.000 h (L80B20)**.

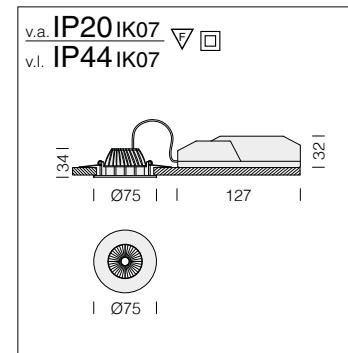

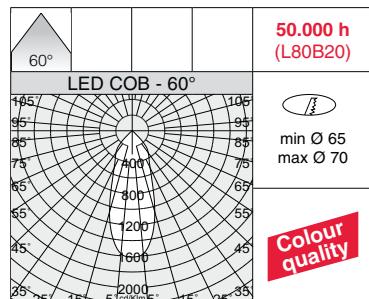

Power factor >0.9.

Photobiological safety class: exempt group.

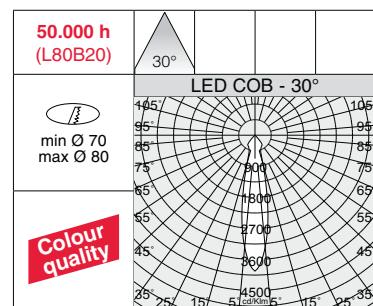

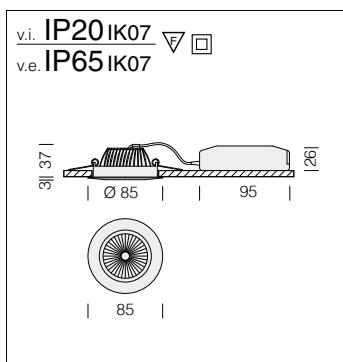

The right lighting and fixture play a vital role in facilitating sales. This is the reason why LED fixtures with a **CRI>90** are being requested. Therefore, the current trend is geared towards the manufacturing of more flexible fixtures, which also emit an excellent quality of light, while guaranteeing remarkable energy savings and lower maintenance costs.

The Colour Rendering Index (**CRI**) indicates how truthfully the artificial light source is able to reproduce the colours of objects. It varies from a range of **0 to 100**, where **0 represents the minimum** and **100 is the maximum**. Daylight is the best source of light from a physiological point of view because it contains the full colour spectrum. Therefore, a lamp with a high colour rendering index is very important to ensure the wellbeing and comfort of the occupants of a room and it is absolutely necessary in rooms where good visibility is required.

Trimless is a modular revolving recessed spotlight, ideal for your store, home or hotel.

This latest generation system meets perfectly all the needs of a new type of interior lighting concept which has drastically changed over the past few years. The first goal is the search of maximum visual comfort, and this implies giving light different meanings according to the place into which the fixture is installed.

Housing: in die-cast aluminium with adjustable and tilting spotlights.

Equipment: equipped with galvanised steel support brackets which guarantee perfect attachment to suspended ceiling from 12 mm to 25 mm thick.

Reflector: high-efficiency metallised polycarbonate.

LED: high-efficiency light sources (**CRI 90**).

Luminous flux maintenance 80%: **50.000 h (L80B20)**.

Power factor >0.95.

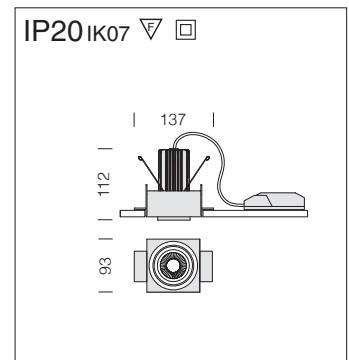

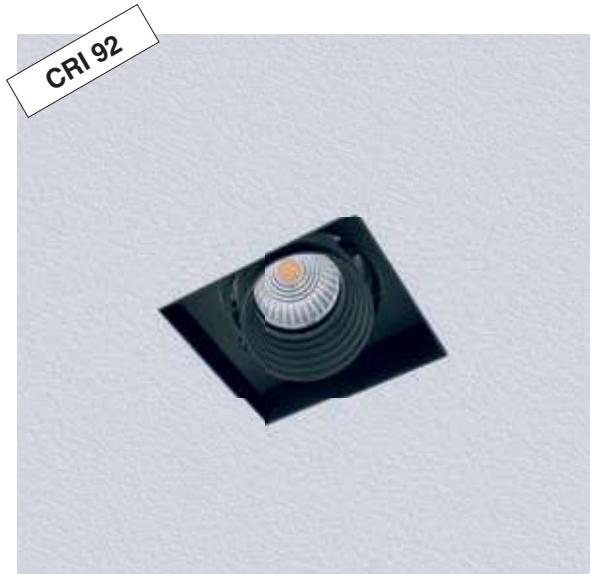

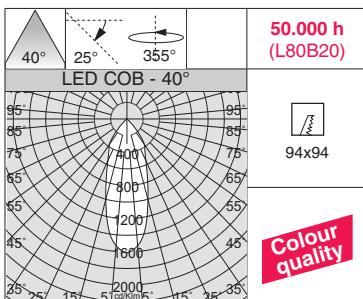

Photobiological safety class: exempt group.

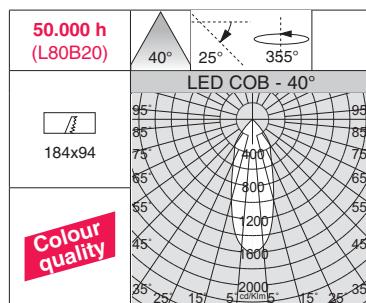

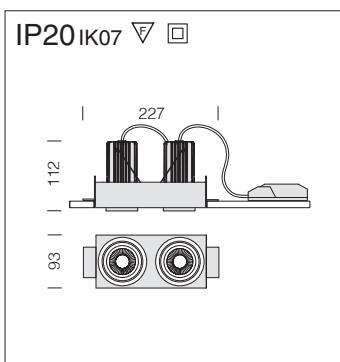

The right lighting and fixture play a vital role in facilitating sales. This is the reason why LED fixtures with a **CRI>90** are being requested. Therefore, the current trend is geared towards the manufacturing of more flexible fixtures, which also emit an excellent quality of light, while guaranteeing remarkable energy savings and lower maintenance costs.

The Colour Rendering Index (**CRI**) indicates how truthfully the artificial light source is able to reproduce the colours of objects. Was designed to ensure versatility and energy-efficiency: thanks to the use of LED technology, it can contain consumption and be installed in small spaces, hence saving resources.

Frame: in aluminium.

Inner slab: in PMMA.

Diffuser: in opal engineering plastic with high transmittance.

Wiring: rapid wring connection, the fixture does not need to be opened; equipped with fast connector.

Low Flicker: product with a very low flicker; uniform light for greater eye protection.

LED: luminous flux maintenance 80%: **50.000 h (L80B20)**.

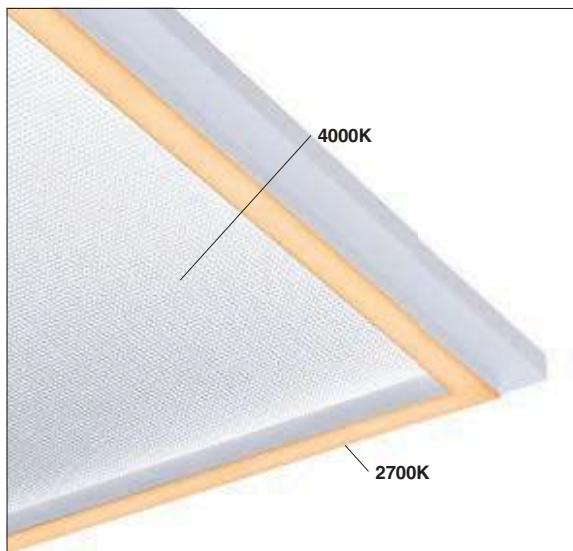

Power factor ≥0,95.

Photobiological safety class: exempt group.

Construction quality is an important factor for the product's aesthetics and performance, turning into a key element to ensure reliability over time. In the case of Fosnova's Pannello and PanelTech, the slab is made in top-notch material, **PMMA** (poly methyl methacrylate), a polymer that keeps its characteristics unaltered in time and prevents the lens from yellowing.

Version with **2700K-CRI 84 LED integrated into the frame** and separate on/off switching as standard; possibility to control or switch lights on/off also via remote control to be purchased separately (maximum 6 units, 200 controllable fixtures and maximum remote control distance of 20 metres). Ideal to create special effects, such as accent lighting and ambient lighting.

Inner slab: in PMMA.

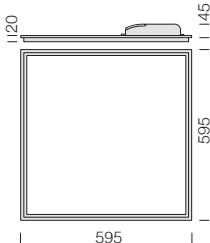

LED: luminous flux maintenance 80%: **50.000 h (L80B20)**.

Power factor ≥ 0.95 .

Photobiological safety class: exempt group.

Fosnova

The superior quality of LED lighting is now more affordable and accessible thanks to a benchmarking product that offers, at contained costs, the ideal light for offices, shopping centres, hotels and healthcare facilities and, in general, all spaces where continuous lighting is necessary. It is the best and easiest way to get one of today's most advanced technology in interior lighting solutions. The presence of a LED source is not always synonym with excellent performance. The long service life and optimal light output of a lighting system also depend on the use of top-notch materials that are tested, controlled and selected with care to maintain lighting and aesthetic quality over time: lumen maintenance, perfect colour rendering, no glare and anti-yellowing of components. A special slab fitted between the LED source and the diffuser is responsible for the operation, quality and amount of light emitted from the light panel. This slab is made in PMMA (polymethyl methacrylate), a polymer that keeps its characteristics unaltered in time and prevents the lens from yellowing.

Frame: in aluminium.

Inner slab: in PMMA.

Diffuser: in opal engineering plastic with high transmittance.

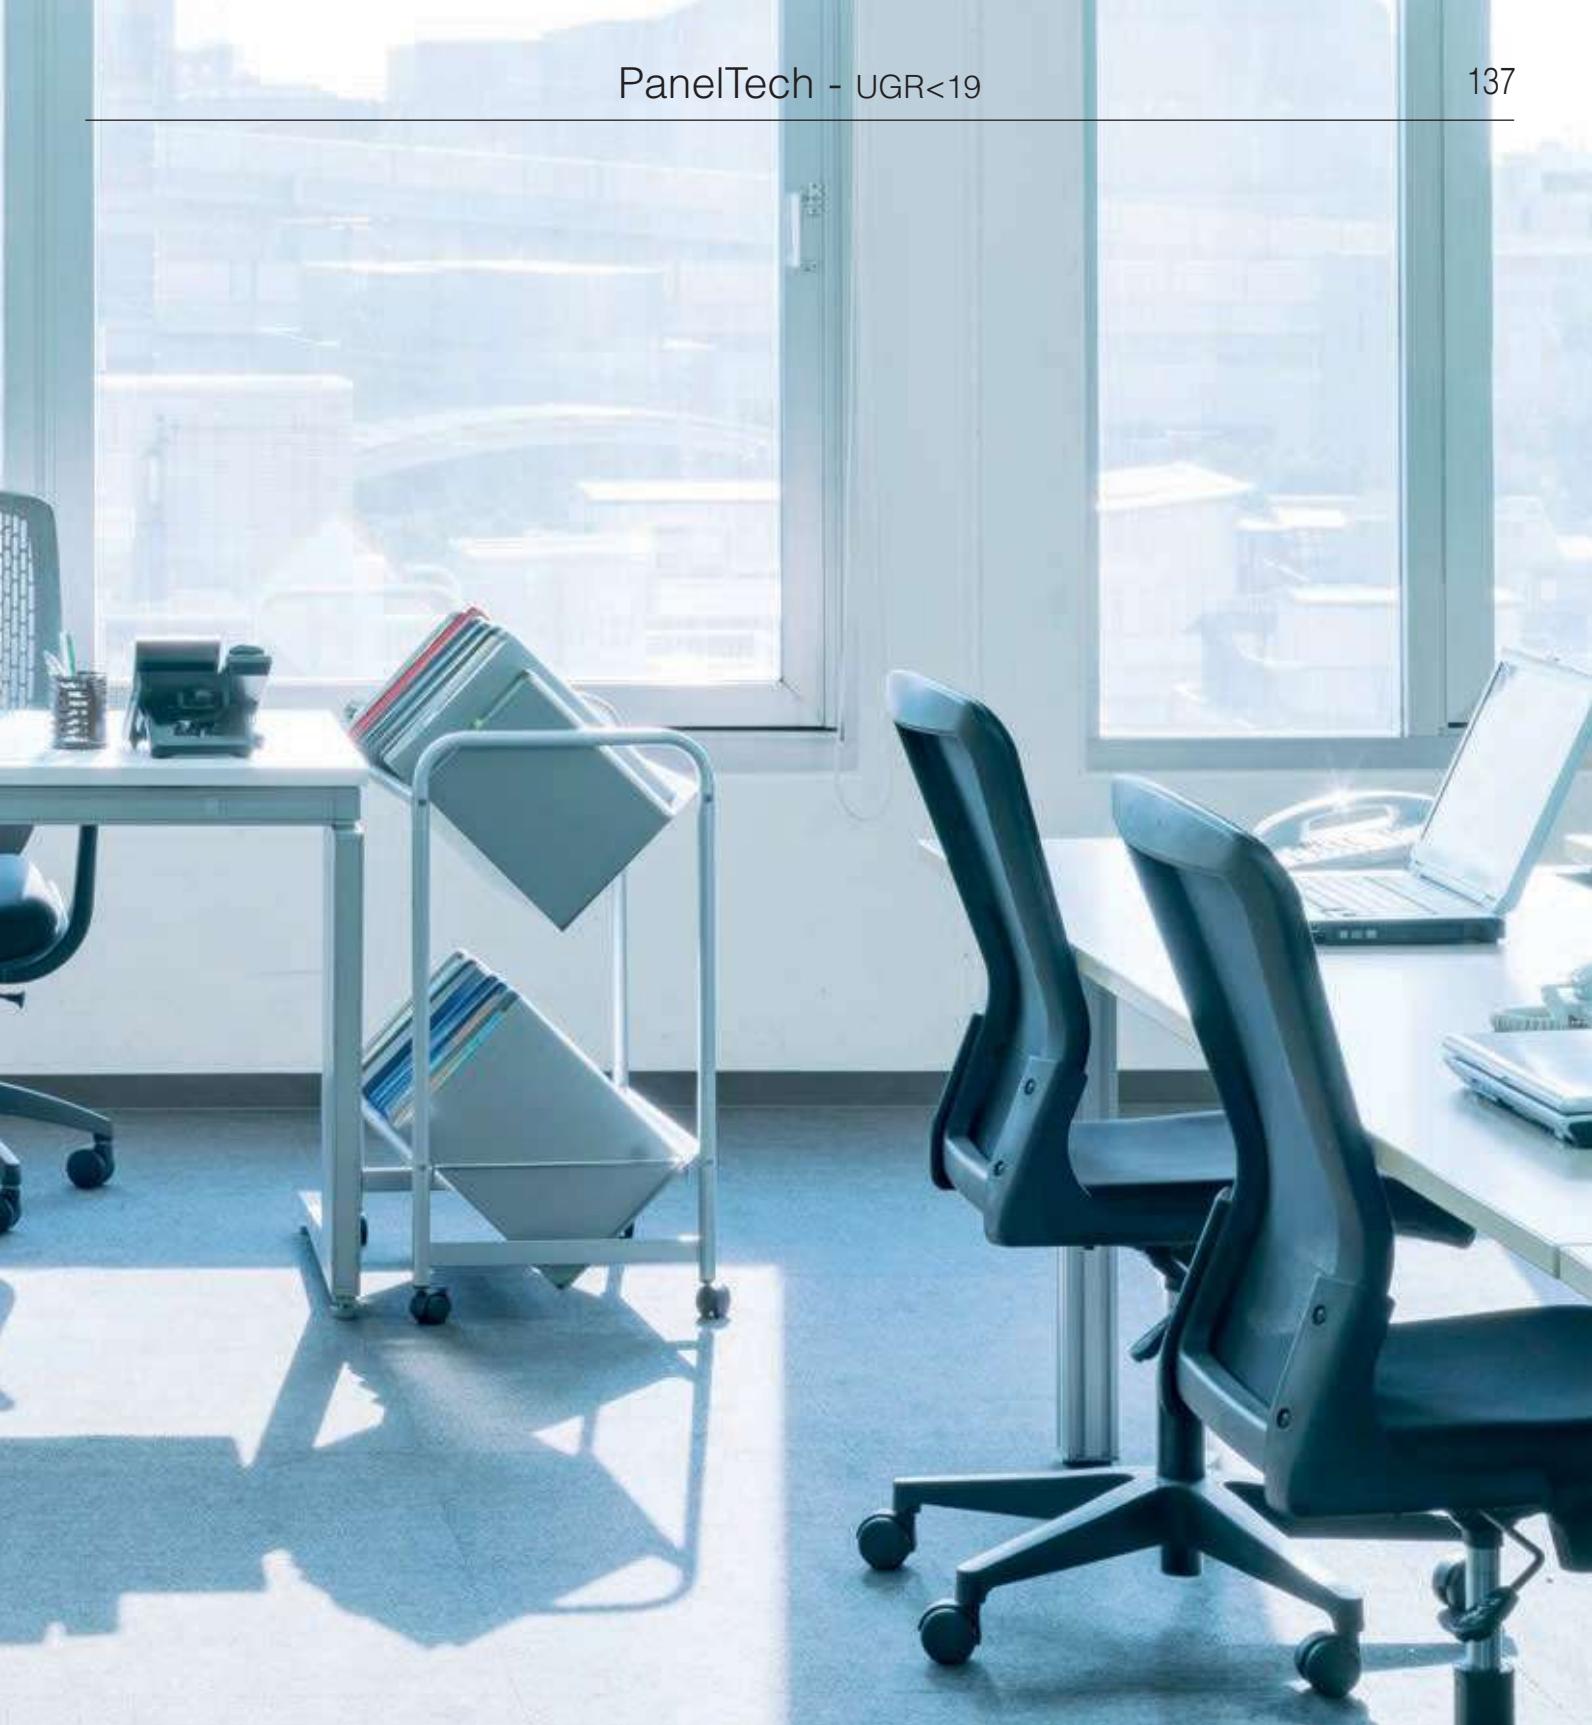

Wiring: rapid wiring connection, the fixture does not need to be opened; equipped with fast connector.

Low Flicker: product with a very low flicker; uniform light for greater eye protection.

LED: luminous flux maintenance 80%: **50.000 h (L80B20)**.

Power factor $\geq 0,95$.

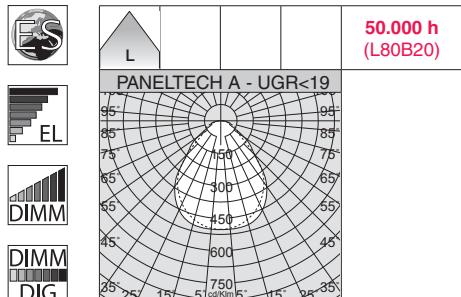

Photobiological safety class: exempt group.

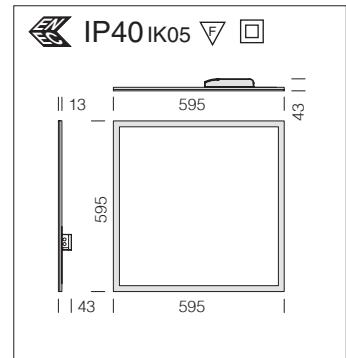

Classification of UGR values by applications	
UGR	
≤ 16	Very demanding applications (technical drawings)
≤ 19	Offices and schools (reading, writing, business meetings, computer work)
≤ 22	Industrial applications, craftsmen
> 28	High glare

The **UGR** (unified glare rating) is an international unified measure developed by the CIE (Commission International de l'Eclairage) to assess the direct glare generated by a lighting system. The European standard regulating the lighting of indoor work places (**UNI-EN**

12464-1) recommends a specific UGR value for different applications ranging between **10 and 30; the lower the UGR value, the lower the glare**. The exact value of this index differs by project type because it depends on the position of the luminaires, room characteristics (dimensions, reflections) and on the point of observation of viewers.

PANELTECH - PUSH DIMM DALI VERSION (sub-code -1245)

Example of application

Operating principle:

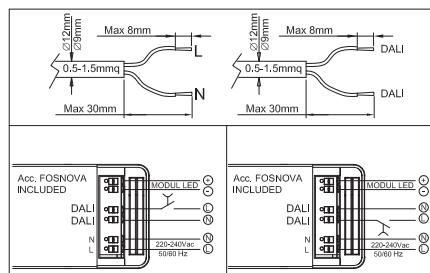

Lighting fixtures are connected by means of standard parallel connector(s) which are supplied by the installer and that send a signal on the driver's DALI input. The other DALI input is connected to the neutral terminal.

Lighting fixtures are powered directly at 230 V from the panel.

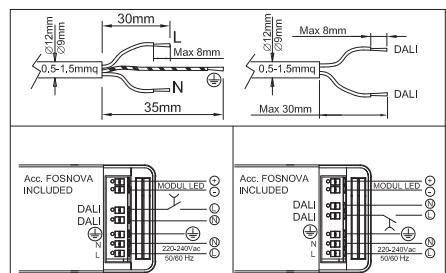

ADVANTAGES:

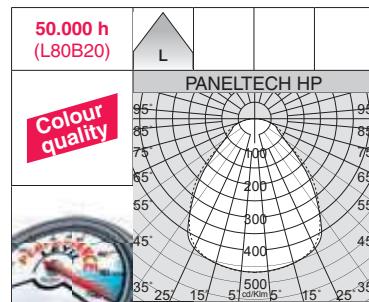

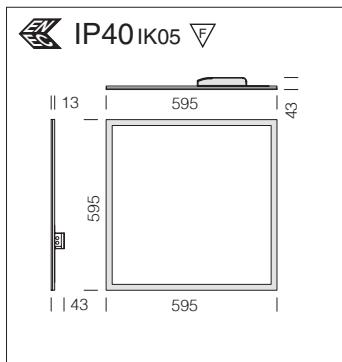

- No need for connection accessories
- No limit in the number of parallel connectors (PB)
- No power cable

Linear Systems

Liset 2.0

p. 146

Sintesi System

p. 176

Strip - LED

p. 192

Liset 2.0 is a linear and modular lighting system that is easily customisable and capable of offering a series of lighting solutions in any setting, including retailing, artistic and cultural spaces or in entrance lobbies and/or hospitality facilities. Compact, elegant, flexible and small, **Liset 2.0** is simple to install as a recessed, ceiling, suspension or track lamp. It is available in three versions: with dark light lamellar optics with URG<19, or with either white or black polycarbonate comfort optics and polycarbonate opal diffuser. The entire range has latest generation 4000K LED sources with 80 and 90 CRI, making these products easy to fit into any lighting design project.

Housing: made of extruded aluminium.

Heads: in die cast aluminium.

LED: luminous flux maintenance 80%: **50.000h (L80B20)**.

Power factor: ≥0,92.

Photobiological safety class: exempt group.

The right lighting and fixture play a vital role in facilitating sales. This is the reason why LED fixtures with a **CRI>90** are being requested. Therefore, the current trend is geared towards the manufacturing of more flexible fixtures, which also emit an excellent quality of light, while guaranteeing remarkable energy savings and lower maintenance costs.

The Colour Rendering Index (**CRI**) indicates how truthfully the artificial light source is able to reproduce the colours of objects. It varies from a range of **0 to 100**, where **0 represents the minimum** and **100 is the maximum**. Daylight is the best source of light from a physiological point of view because it contains the full colour spectrum. Therefore, a lamp with a high colour rendering index is very important to ensure the wellbeing and comfort of the occupants of a room and it is absolutely necessary in rooms where good visibility is required.

Classification of UGR values by applications		The UGR (unified glare rating) is an international unified measure developed by the CIE (Commission Internationale de l'Eclairage) to assess the direct glare generated by a lighting system. The European standard regulating the lighting of indoor work places (UNI-EN 12464-1) recommends a specific UGR value for different applications ranging between 10 and 30 ; the lower the UGR value, the lower the glare.
UGR	≤ 16	Very demanding applications (technical drawings)
	≤ 19	Offices and schools (reading, writing, business meetings, computer work)
	≤ 22	Industrial applications, craftsmen
	> 28	High glare

30; the lower the UGR value, the lower the glare. The exact value of this index differs by project type because it depends on the position of the luminaires, room characteristics (dimensions, reflections) and on the point of observation of viewers.

Liset 2.0 System

Liset 2.0 is a real multi-purpose lighting system studiet to make the best use of the LED technology. Its clean lines and luminous efficiency ensure extraordinary light and colour effects.

The system's extreme flexibility is guaranteed by the numerous compositions that can be made using the angular module to create **ALL LIGHT** solutions, which can offer uniform lighting of the space and constant visual comfort.

Liset 2.0 - special compositions with **SUSPENSION** fixtures with acc. "ALL LIGHT" angle module

Liset 2.0 - KIT

On request:

tunable White system for downlights with adjustable colour temperature from 2,700 to 6,500 K at constant luminous flux. Ideal for retail, public spaces (hotels and restaurants), corridors, stairs, applications. **Functions:**

- Constant light output function (CLO)
- switchDIM and colourSWITCH with memory function;
- colourSWITCH with 9 predefined colours;
- Configurable via DALI;

ColourSWITCH function

A conventional pushbutton can be used to control the system via colourSWITCH. Use of pushbutton with indicator lamp is not permitted. If the device is controlled via DALI/DSI, colourSWITCH is not available. For control via a pushbutton different settings can be made:

- Short press: setting the colour temperature

via colourSWITCH mode with 9 values between 2,700 and 6,500 K.

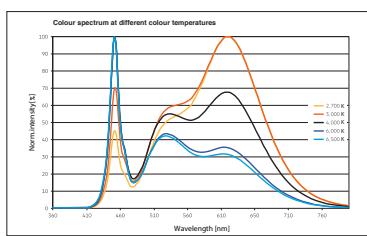

- Long press (> 1 s): stepless setting of colour temperature. After completion the colour temperature direction will be inverted.
- These values can be changed via masterCONFIGURATOR.
- Alternatively the colour temperature could be changed via DALI device type 8 control system.

In installations with LED Drivers with different colour temperature or opposite colour temperature directions (e.g. after a system extension), all LED Drivers can be synchronized to 4,500 K by a 10 s push.

SwitchDIM function

Integrated switchDIM function allows a direct connection of a pushbutton for dimming and switching. Brief push (< 0.6 s) switches LED Driver ON and OFF. The dim level is saved at power-down and restored at power-up. When the pushbutton is held, LED modules are dimmed. After releasing and pushing the LED modules are dimmed in the opposite direction.

In installations with LED Drivers with different dimming levels or opposite dimming directions (e.g. after a system extension), all LED Drivers can be synchronized to 50 % dimming level by a 10 s push. Use of pushbutton with indicator lamp is not permitted.

The system is made up of individual modules that can be **recessed mounting in plasterboard false ceilings** thanks to their remarkably small dimensions, allowing them to fit perfectly into any space. These modules are characterised by high-definition optics in thermally conductive plastic with metallic finish, combined with a special diffuser to optimise the luminous output and significantly reduce direct glare.

LED: Luminous flux maintenance 80%: 50.000h (L80B20). Power factor: ≥0,92. Photobiological safety class: Exempt group.

The innovative wall washer optic was designed to guarantee uniform lighting of walls, avoiding anti-aesthetic shadow areas. Suited for installation in transit areas or corridors.

Inner slab: in PMMA.

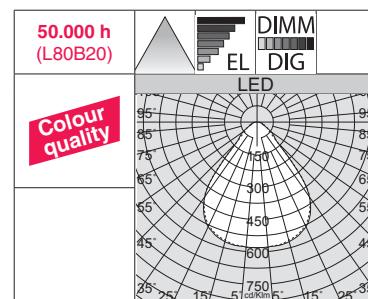

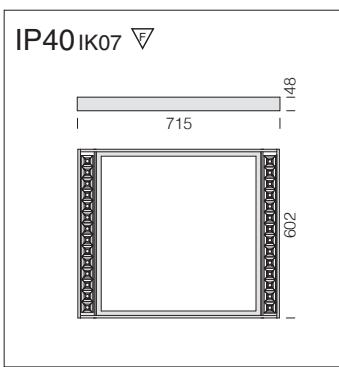

Diffuser: in prismatic engineering plastic with high transmittance.

78° comfort module. **On request:** 54° version. Driver inside.

On request: possibility of separate ON/OFF switch.

Sintesi System is the new linear lighting system by Fosnova with a sober and elegant design, available in a wide range of optics and LED modules. The system can be easily mounted as a suspension lamp for direct and/or indirect lighting, as a ceiling lamp or in continuous lines, making it the most effective choice for any lighting project and obtain the needed lighting level with an efficient use of energy.

Housing: in extruded 6060 aluminium alloy. Removable top cover in extruded 6060 aluminium for electrical connection.

Diffuser: wide-beam lenses in PMMA.

Closing ends: V0 ABS plastic injection moulded.

LED: Luminous flux maintenance 80%: **50.000 h (L80B20)**.

Power factor >0.92

Photobiological safety class: Exempt group.

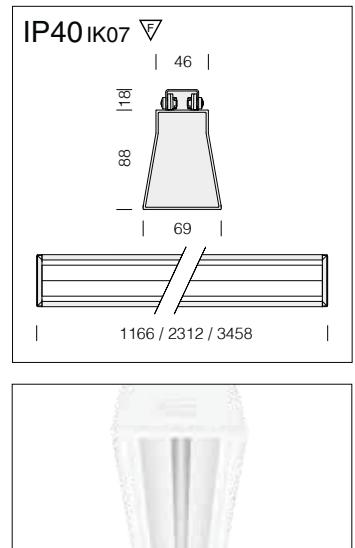

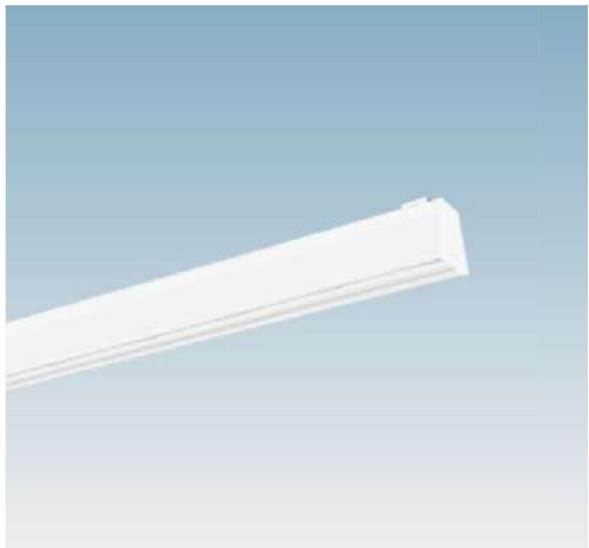

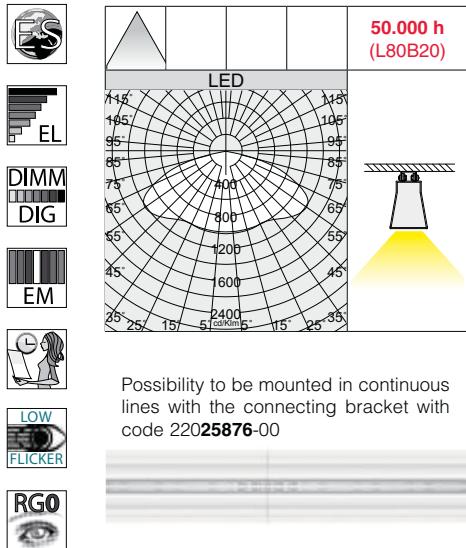

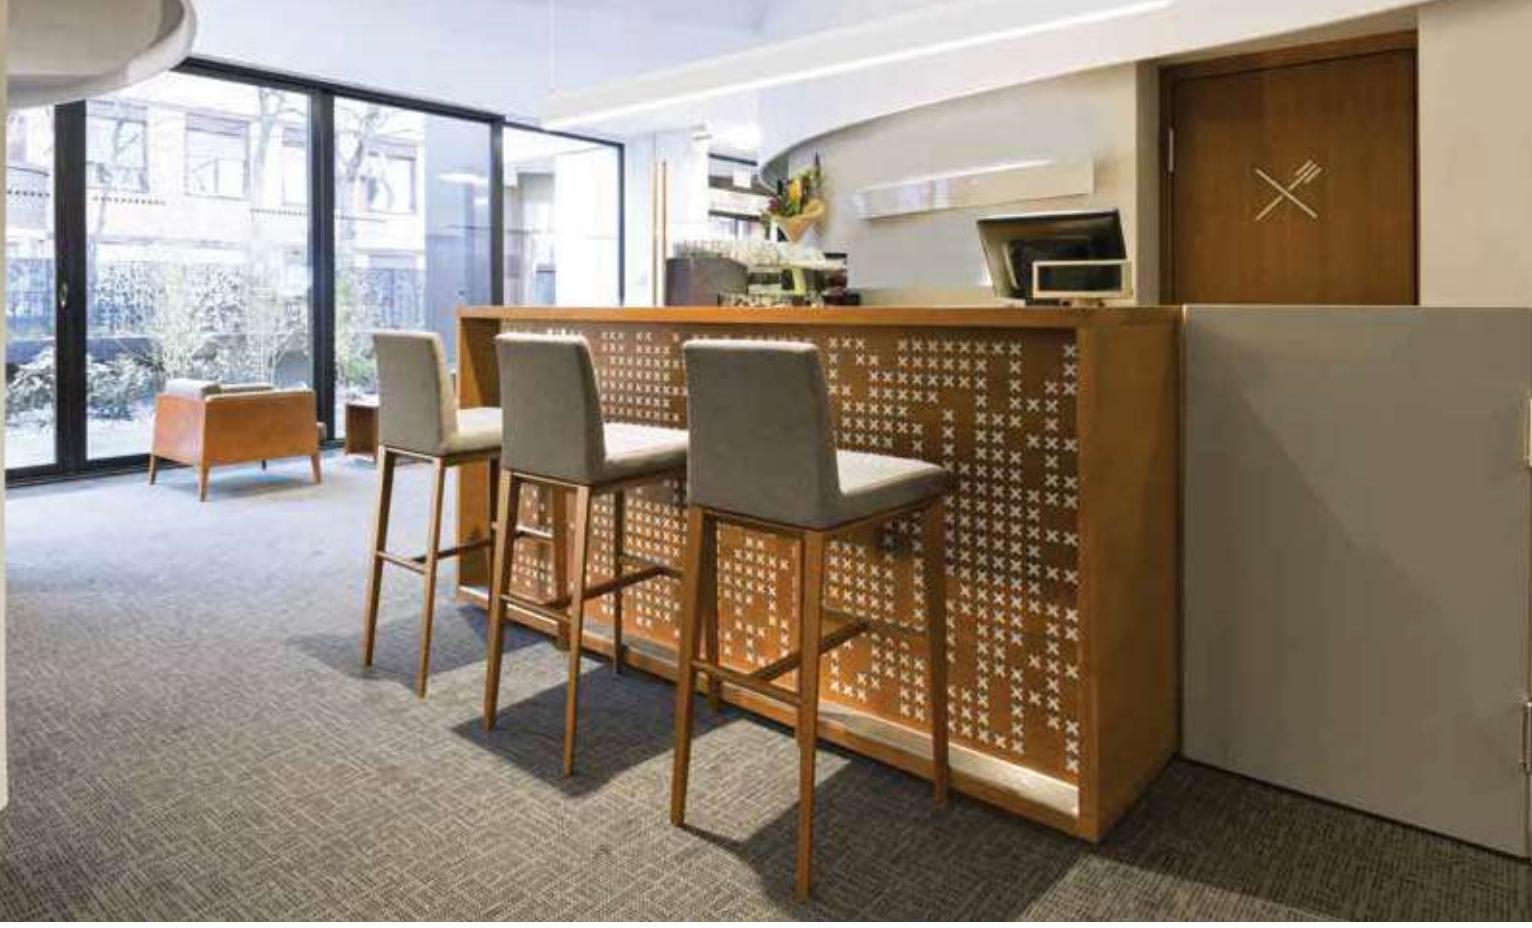

* Data refer to the LED's **nominal luminous flux** ($T_a = 25^\circ\text{C}$) with a tolerance of $\pm 10\%$ compared to the reported value. The **W** column indicates the **nominal power** of the LED module.

Classification of UGR values by applications	
UGR	≤ 16 Very demanding applications (technical drawings)
	≤ 19 Offices and schools (reading, writing, business meetings, computer work)
	≤ 22 Industrial applications, craftsmen
	> 28 High glare

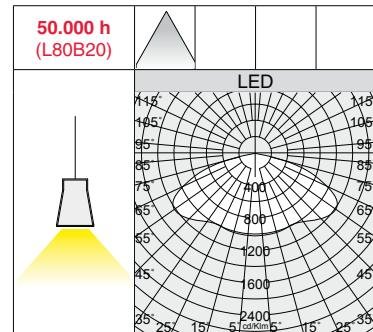

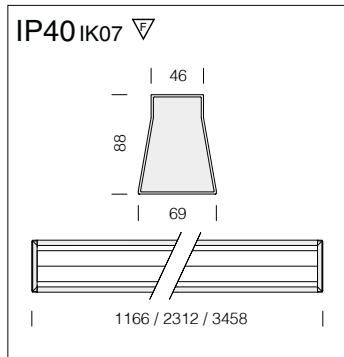

The **UGR** (unified glare rating) is an international unified measure developed by the CIE (Commission Internationale de l'Eclairage) to assess the direct glare generated by a lighting system. The European standard regulating the lighting of indoor work places (**UNI-EN 12464-1**) recommends a specific UGR value for different applications ranging between **10 and 30; the lower the UGR value, the lower the glare**. The exact value of this index differs by project type because it depends on the position of the luminaires, room characteristics (dimensions, reflections) and on the point of observation of viewers.

tions ranging between **10 and 30; the lower the UGR value, the lower the glare**. The exact value of this index differs by project type because it depends on the position of the luminaires, room characteristics (dimensions, reflections) and on the point of observation of viewers.

Sintesi Spot - UGR<22 - light module

		CLD CELL	LUMEN OUTPUT (tq= 25 °C)	
LED	colour	code	W	K - ølm - CRI
LED	white	22011610-00	31	4000K - 4320lm - CRI 80

The **Sintesi Spot** extra modules can be easily installed with the supplied connecting bracket for perfect mechanical alignment of profiles, fully compatible with all versions of Sintesi System; therefore, they are ideal to create multiple compositions in continuous lines capable of meeting any lighting and design need.

In extruded aluminium complete with connecting bracket. It allows the mechanical alignment of profiles. A lighting module complete with reflector in high-performance metallic V0 polycarbonate with micro faceting.

Sintesi Sensor - light and/or presence detector

colour	code
white	22011619-00

The **Sintesi Sensor** extra modules can be easily installed with the supplied connecting bracket for perfect mechanical alignment of profiles, fully compatible with all versions of Sintesi System; therefore, they are ideal to create multiple compositions in continuous lines capable of meeting any lighting and design need.

In extruded aluminium complete with connecting bracket. It allows the mechanical alignment of profiles. The module comes with the light and/or presence sensor for smart light management. To be installed only in DALI versions.

Strip LED: 24 V constant voltage strip. Ideal for various decorative lighting applications: facade accent lighting, ceiling integration, cove lighting and for aluminium extrusions.

Features and benefits :

- Luminous flux range of 600, 1200, 1800 lm/m
- Colour temperature 3000, 4000 and 6500 K
- High design freedom due to 10 cm cut-options
- Pitch distance of 1.4 cm enables high light homogeneity
- Self-adhesive 3M tape at the backside for simple mounting on different surfaces
- PCB to PCB and wire to PCB connectors for toolless handling and connection
- Life-time 50,000 hours
- System solution in combination with constant voltage LED Driver (fixed output and dimmable)
- **Connector not included**

Technical data

Beam characteristic	120°
Ambient temperature range	-35 ... +50 °C
tp rated / tc	65 °C / 75 °C
Supply voltage DC	24 V
Supply voltage range DC (1)	21,5 – 26,4 V
Insulation test voltage	0,5 kV
Risk group (EN 62471:2008)	0

(1) Exceeding the max. operating voltage leads to an overload on the Strip. This may in turn result in a significant reduction in life-time or even in destruction.

Description: Strips to be applied on smooth, clean and dry surfaces with 3M adhesive tape.

Avoid installation on sharp surfaces and pay attention not to damage components.

The product is supplied in 5-meter strips wrapped around support rolls, including a package containing connection accessories.

Strips can be cut at preset distances. For intermediate cuts, use the end caps included in the package and make sure that all cut ends are perfectly sealed.

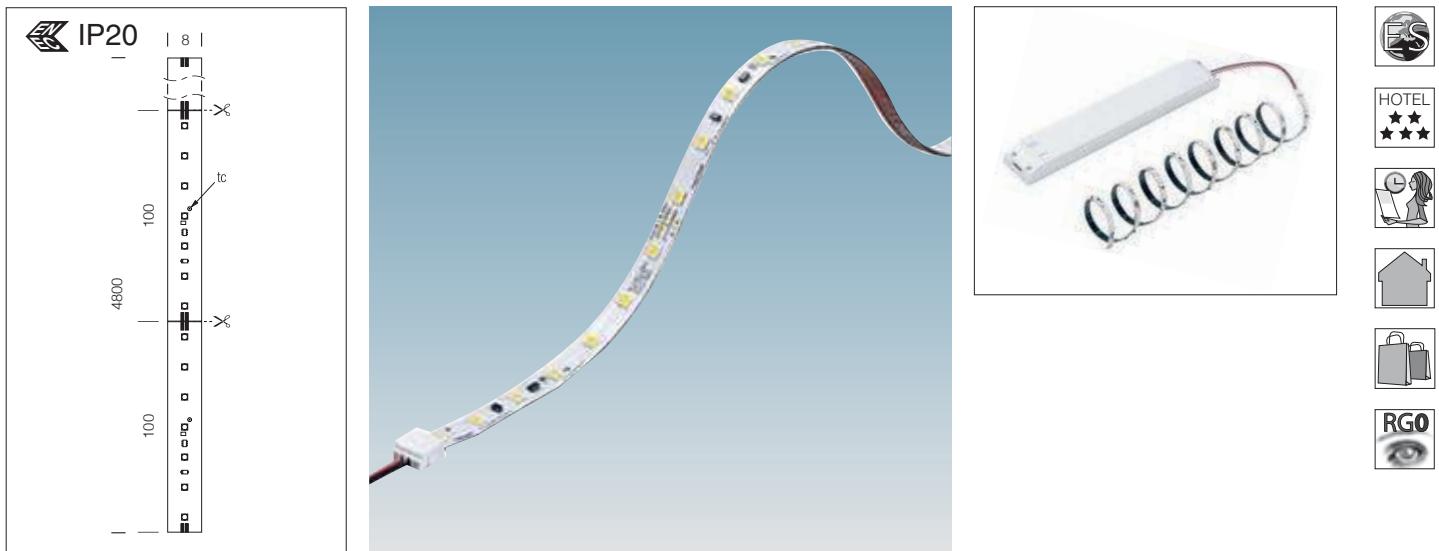

Fosnova does not take responsibility for cuts made after the material has been delivered.

Connector not included.

Range of profiles of different shapes used to house the LED strips, specifically designed to meet multiple lighting applications. Heat dissipation is guaranteed by the aluminum profiles, while the LED ensures maximum efficiency and lamp life; ideal for installation in false ceilings, floors, cupboards, glass cabinets and stairways. The profile can house adhesive LED Strips featured.

	Profile A - angular ceiling		Profile C - ceiling

Connector for connection of LED strip modules:

- Easy assembly: remove adhesive 3M tape on the backside of the LED Strip in the connection area, insert the LED Strip into the connector and lock it by pressing down the top of the connector.
- The insertion length of the LED Strip must be at least 4 mm (cut the LED Strip at the dotted lines).

RECEPTION

Decorative Luminaires

Themis

p. 198

Slimcover

p. 204

Themis stands out for its simple design and high-quality lighting output delivered by latest generation LED sources. Studied to deliver direct lighting, it is equipped with a highly efficient reflector (adjustable) or with lenses to enhance the light beam. Designed to be easily installed inside ceilings thanks to its mounting bracket, it is capable of illuminating full and empty spaces, bringing out all the potential of architectonic details and giving rhythm and colour to important interiors.

Housing: made of die-cast aluminium with clear polycarbonate diffuser.

Equipment: supplied with bracket for ceiling installation.

LED: Luminous flux maintenance 80%: **50.000 h (L80B20)**.

Power factor >0.9

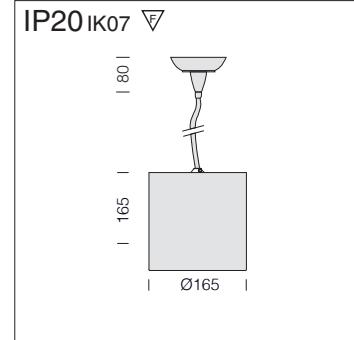

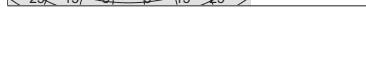

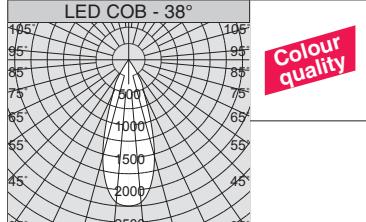

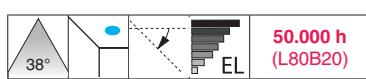

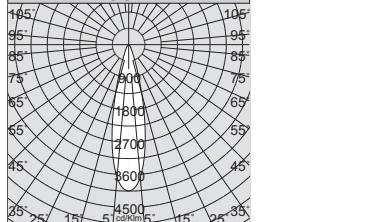

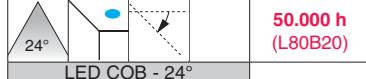

Photobiological safety class: Exempt group.

LUMINAIRES

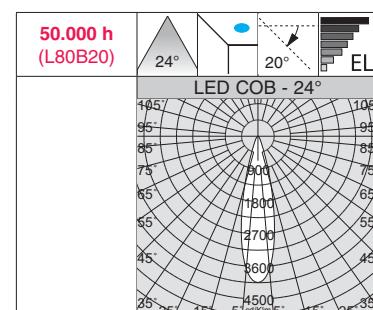

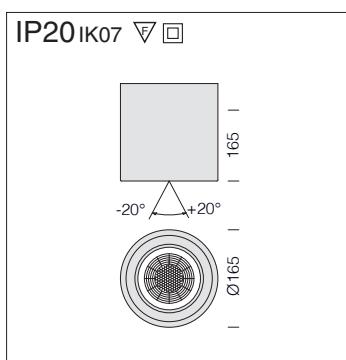

The right lighting and fixture play a vital role in facilitating sales. This is the reason why LED fixtures with a **CRI>90** are being requested. Therefore, the current trend is geared towards the manufacturing of more flexible fixtures, which also emit an excellent quality of light, while guaranteeing remarkable energy savings and lower maintenance costs.

The Colour Rendering Index (**CRI**) indicates how truthfully the artificial light source is able to reproduce the colours of objects. It varies from a range of **0 to 100**, where **0 represents the minimum** and **100 is the maximum**. Daylight is the best source of light from a physiological point of view because it contains the full colour spectrum. Therefore, a lamp with a high colour rendering index is very important to ensure the wellbeing and comfort of the occupants of a room and it is absolutely necessary in rooms where good visibility is required.

- 1-** This catalogue supersedes and cancels all previous editions.
- 2-** All list prices are VAT excluded and already include WEEE contribution.
However, prices are not binding and the company will inform you on any variation.
- 3-** Goods travel at the customer's risk, including in the case of possible breakages, even if shipped carriage free. No complaints will be accepted after 8 days from receipt.
- 4-** Orders will be dealt with according to availability; partial shipments may also be sent out.
- 5-** The characteristics of the articles, the LEDs used and the lighting design calculations may be subject to change without notice and with no obligation of notification, in accordance with our manufacturing requirements and in order to finalise the lighting fixture.
- 6-** Transportation costs, with the exception of delivery by our vehicles, are at the customer's expense.
- 7-** Returned goods will not be accepted. In any case, returned goods must be authorised by our company and will be accepted carriage free if the material is in a good state of conservation and can therefore be used. (Ask for the current year's circular).
- 8-** We recommend that plastic components, especially those designed for suspension luminaires, be checked at least every time the bulb is changed.
- 9-** Only payments made directly to our address or to persons authorised by our company, will be accepted.
- 10-** Reproduction, even in part, of the descriptions and illustrations in our catalogue is prohibited.
- 11-** The place of jurisdiction for any legal disputes arising from or related to these General Sales Conditions shall be Milan.
- 12-** Fosnova guarantees that the products it manufactures are free of defects, in accordance with art. 1490 and subsequent articles of the Italian Civil Code.

QUANTITIES SHALL BE HANDLED ONLY IN PACKAGES OR RELEVANT MULTIPLES**SURCHARGE OF 10% FOR ACCESSORIES NOT HANDLED IN PACKAGES****DIMENSIONS ARE GIVEN IN MM, UNLESS OTHERWISE INDICATED.****FOR VERSIONS WITH ELECTRONIC WIRING AND EMERGENCY UNIT, THE MEASUREMENTS OF THE MODULE DO NOT VARY,
EXCEPT OTHERWISE INDICATED**

PHOTOMETRIC DATA, POWER EFFICIENCY AND LUMINAIRE DESIGN INFORMATION MAY BE SUBJECT TO VARIATIONS AND IMPROVEMENTS. BASED ON THE SPEED OF TECHNOLOGICAL EVOLUTION AFFECTING THESE PRODUCTS. THE COLOUR TEMPERATURES OF LEDS FALL WITHIN ACCEPTED INDUSTRY TOLERANCES DEFINED BY LED MANUFACTURERS, WE WILL GIVE NOTICE OF THESE CHANGES ON OUR WEBSITES FROM TIME TO TIME.

SOME IMAGES ARE SIMULATED APPLICATION AND / OR PHOTOMONTAGES

OUTPUT LUMINOUS FLUX AND POWER (tq): THE REPORTED LUMINOUS FLUX IS THE FLUX EMITTED BY THE LIGHT SOURCE WITH A TOLERANCE OF $\pm 10\%$ COMPARED TO THE INDICATED VALUE. THE W TOT COLUMN (EXCEPT FOR THE EMERGENCY VERSIONS, OF WHICH VALUES ARE TO BE PROVIDED UPON REQUEST) INDICATES THE TOTAL WATTAGE ABSORBED BY THE SYSTEM WITHOUT EXCEEDING 10% OF THE INDICATED VALUE.

NOMINAL LUMINOUS FLUX AND POWER (ta): LUMINOUS FLUX AND POWER VALUES ARE NOMINAL. THE FLUX MAY HAVE A TOLERANCE OF $\pm 10\%$ WITH REFERENCE TO THE INDICATED VALUE. THE W COLUMN INDICATES THE LED'S POWER WATTAGE.

ALWAYS STAY WITHIN THE RECOMMENDED OPERATING TEMPERATURES OF THE DEVICE.**DISANO GROUP IN THE WORLD****DISANO ILLUMINAZIONE s.p.a.**
