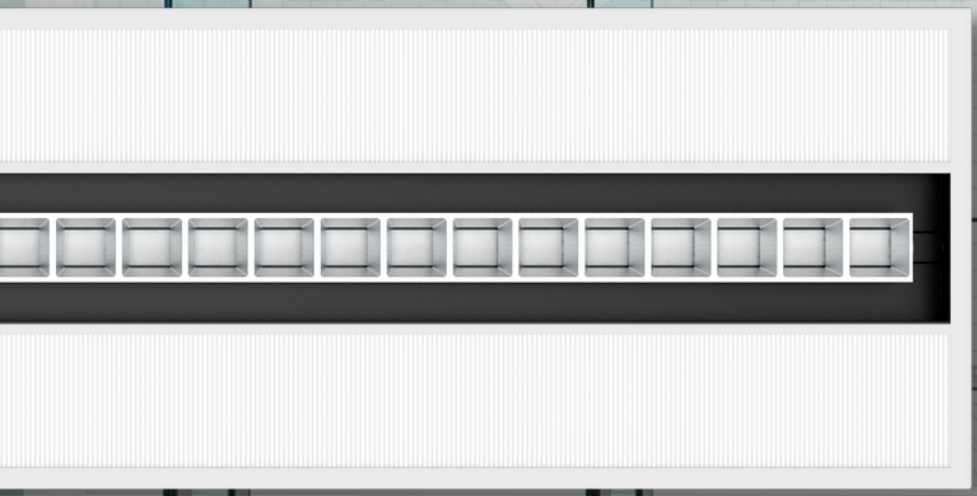
PLATINUM III



SAL COMMERCIAL

OUR STORY

The foundations of SAL Commercial date back to 1998 with the establishment of Sunny Lighting Australia, a family owned business. The Australian owned and
operated business methodically developed a widespread reputation as a trusted brand in the Australian lighting community.

Global market challenges and the dynamic evolution of LED technology catapulted Sunny Lighting Australia to the forefront of the lighting industry, manufacturing and supplying cutting edge solutions for the wholesale channel. Decades on, the 100% Australian owned company now known as SAL National has continued to build on its brand reputation for quality product and exceptional service to be a leader of lighting technologies in the 21st century.

SAL Commercial has established itself as an organisation that understands all aspects of the project lighting market.

With a desire to challenge the status quo of the lighting industry and develop class leading products that not only enhance the experience for end users but offer class leading features and performance to those who design, specify and who install our products.

SAL Commercial is proud of our rich history in the Australian lighting landscape and steadfast in the belief that we can help to shape the lighting industry as the world becomes more dynamic and flexible for decades to come.

SAL Commercial has established key partnerships with the worlds leading technology companies, providing the ability to handle projects of all sizes with a focus on delivering best in class results for lighting and quality.

There are many links to the project lighting chain and at SAL Commercial, it is our duty to ensure the end to end solution delivers successful outcomes.

WELL BUILDINGS
DYNAMIC LIGHTING FOR HIGH PERFORMANCE OFFICES

The WELL Building Standard™ (WELL) has exploded in Australia with more than 10% of all office space either certified or registered according to the International Well Building Institute.

SAL Commercial provides WELL Building Standard guidance as our WELL AP (Accredited Professional) staff can support your understanding and delivery of the Lighting portion of your WELL accreditation. We are available to assist you with your WELL Project.

The WELL Building Standard™ (WELL) is at the forefront of the Healthy Building Movement, and where the Green Building movement focused on energy, water and waste, the Healthy Building movement, lead by WELL, focuses on the most important and expensive asset for many businesses, its people and their health and well being. "We know from April 2020 research from the Harvard School of Public Health that Healthy buildings attract better tenants and higher yields and buildings with a lower rating will lag in yields and returns", says Simon Richardson, National Technology and Solution Manager.

"And that's another reason why we have partnered with major control solutions providers to provide smarter offices, healthy building upgrades and simple, annual WELL reporting at the press of a button." WELL Building Standard™ works hand in hand with other Australian building rating tools too.

In Australia, alignment with the Green Building Council of Australia and WELL provide what are called Crosswalks - which according to WELL "are intended to identify synergies between WELL and other green or sensor-related building standards, and streamline efforts for projects seeking a dual rating by acknowledging where WELL Building Standard requirements are deemed equivalent and aligned with aspects of the alternate building rating tool."

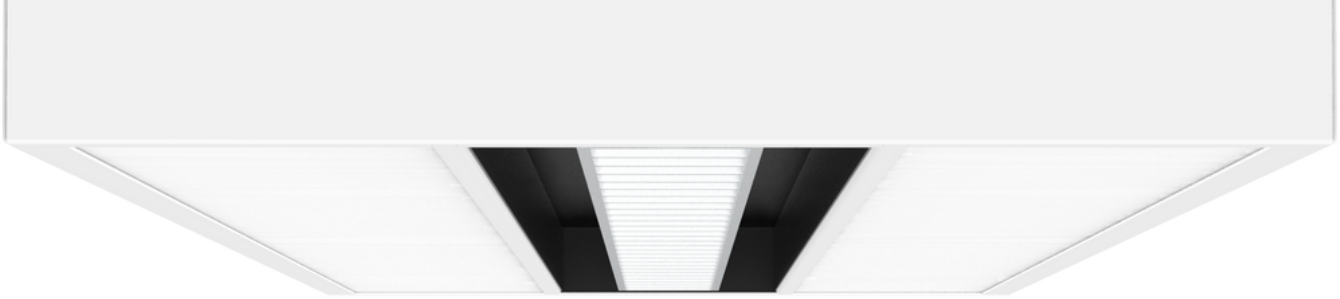
> Its not just lighting, its design

YOUR IMAGINATION
IS OUR CHALLENGE

At SAL Commercial we are always thinking about how we can enhance our customers lighting experience and strongly believe our success is measured by our Customers success. It is the continual drive for achievements better than yesterday, that challenges our team to listen, learn and deliver valuable business outcomes for our customers



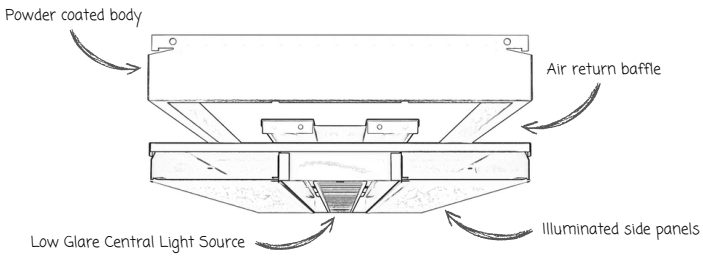
PLATINUM III

DESIGN

ITS NOT JUST LIGHTING
ITS DESIGN

Platinum III is a complete, versatile product that meets all lighting requirements – whether for office, school, hospital or any other commercial projects.

Designed to suit modern commercial architecture, the Platinum III troffer is a dual light source LED luminaire featuring a central diffused cell LED light source and illuminated side panels and recessed, ceiling-mounted and pendant luminaires.



Modern day officers are more than desks and meeting rooms, they offer a flexible and digital experience to suit the modern day environment. Encompassing the latest in LED and diffuser technology, the Platinum III offers a high efficiency, low glare solution.

Application

Offering excellent performance for commercial applications, Platinum III has been designed to offer the complete capability of LED technology with a revolutionary design concept concealing air slot requirements along with a central cell design and illuminated and diffused side panels.

Design

Modern day offices are more than desks and meeting rooms, they offer a flexible and digital experience to suit the modern day environment. Encompassing the latest in LED and diffuser technology, the Platinum III offers a high efficiency, low glare solution.
